The organizers and stockholders would receive stock in the company for their several propositions of material or services, and receive the assistance of the corporation in obtaining further business and other favorable conditions. Idle goods and idle lands and idle hands would be exchanged for capital stock in a corporation which would find itself in a superior position to get business and make money after the "holiday" was ended.

If the moving picture of "Something Doing" catches the interest of the mass, building will not stop at housing, and will not wait for the holiday to end. My notion is to start with something concrete—a house—a price—a time limit—a mutual stimulus—a sound proposition.

A. A. HALLETT,
4-7 Sec'y. Board of Trade.

Pulpwood
1921-1922

Firm in Northern Ontario is in a position to offer from 20,000 to 40,000 cords Spruce pulpwood yearly, both Winter and Summer delivery, for a number of years. Also large quantities of Poplar pulpwood. All exportable. Would consider proposition as Agents for U. S. Mill. References.

Apply Box 470,
c/o Canada Lumberman,
Toronto.

Lumber Property For Sale

About 8,000 acres (held in fee) of lumber lands estimated to contain about 30,000,000 sp. feet of merchantable soft wood.

As a pulp wood proposition, this property should contain 60,000 cords or more.

Included with the lands, is a saw mill, equipped with Dutch furnaces, Waterous edger, planer and lath machine, and situated along the line of the C. N. Railway, the port lies within three miles of the mill, so that water shipments may be made as well as rail.

All the lands are within easy distance of the river, and stream driving does not exceed a distance of more than six miles.

For further information apply to

E. A. SMITH,
23t.f. Shediac, N. B.

FOR SALE.—Retail lumber yard, saw and planing mill, good business established for 20 years, in an excellent village of Southern Ontario. Would sell sawmill separate. R. S. Robinson, Waterford, Ontario. 4-6

Miscellaneous

Preliminary Notice

SALE OF TIMBER

Sealed tenders addressed to the undersigned will be received for the purchase of approximately 528 M. fbm. timber up to noon **April 4th, 1921.**

Detailed list of dimensions may be obtained upon application to the undersigned.

All of the timber was purchased new in the latter part of 1920 and has never been used. Ninety per cent. of the stock is No. 1 Common B. C. fir of good merchantable quality and the balance is of B. C. or Ontario hemlock. It is all in our Toronto yards, conveniently located on railway sidings for loading.

Not less than twenty-five per cent. of the total stock will be sold to any one bidder.

Terms of sale thirty per cent. cash with signing of the order and balance within 60 days.

The lowest or any tender will not necessarily be accepted.

Weddell & Saunders, Engineers & Contractors, 312 McKinnon Bldg., Toronto, Ont.
Toronto, Feb. 24/21. 5

Sale of Timber

Tenders will be received by the undersigned up to and including **Saturday, the 5th day of March, 1921,** for the right to cut timber in the Township of Childerhose, in the Porcupine Mining Division in the district of Temiskaming.

For further particulars apply to the undersigned, or to Mr. W. G. A. Wood, Crown Timber Agent, South Porcupine, Ontario.

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, February 1st, 1921. 4-9

Sale of Timber

Tenders will be received by the undersigned up to and including **Wednesday the 16th day of March, 1921,** for the right to cut the timber on the south half of the township of Shackleton, in the District of Temiskaming.

Terms and conditions of sale and further particulars may be obtained upon application to the undersigned or to Mr. Dalton Spence, Crown Timber Agent, Cochrane, Ontario.

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto,
February 19th, 1921. 5-6

Carelessness Causes Loss.

It is said that more wealth is destroyed by fire in the United States than by all other elements combined and that a large percentage of fires are caused by carelessness. In 1919 there were 2,904 fires in which the loss was $10,000 or more, making a total loss of $268,000,000. 1919 was exceeded only by 1918 when there were 2,943 such fires, and by 1906.

Public attention is being everywhere called to the need of greater care in the use of matches, to a thorough inspection of chimneys, now that winter fires are being built, to a cleaning up of rubbish, and to other similar methods of fire prevention.

FOR SALE

Wholesale Lumber Business

Owing to the death, recently, of Mr. Jas. G. Cane, the business heretofore carried on by him and Mr. Geo. A. Anderson, as Jas. G. Cane & Co., is hereby offered for sale as a going concern.

The stock on hand consists of White Pine and Norway Lumber and Lath: approximately 4,000,000 ft. of lumber and 1,500,000 pcs. of Lath, piled at the following points: Victoria Harbour, Midland, Peterboro, Callander, Spanish Station, and Pakesley.

Further information can be had at the office,

Review of Current Trade Conditions

Ontario and the East

There has been no radical change in the general lumber situation during the past few days. Some cars are selling and retailers are doing a little sorting up order after taking their inventories. Eastern salesmen of British Columbia mills report that they have disposed of a few mixed cars of late and February was a fair month with most of them. The recent cold weather did not add anything to the activity of the trade as building in many sections was deferred. At the recent convention of the Ontario Retail Lumber Dealers' Association, interviews with a number of representative visitors from various parts of the province indicated that business was quiet, but there was a general confidence expressed that it would improve considerably during the coming month. It was too early for many to make any predictions.

The question of prices has been much to the front of late and there seems to be a conviction that present quotations are about as low as they will go. A good idea of the general situation is presented from the wholesalers' standpoint in the address given before the retail lumber merchants at the banquet, by the chairman of the Wholesale Lumber Dealers' Association, which appears in another column, and is well worth a perusal. Mr. Eckardt went into the situation fully and thoroughly and intimated that the cut in the northern part of the province would be considerably less than last year.

Several representatives of the trade say that dry lumber stocks are not large and, if a sudden demand sets in in the spring, there may be some difficulty in meeting unusual requisitions which would result in an ascension in values.

There is a feeling that prices have reached bottom and those, who are holding off for future recessions, are not basing their calculations wisely. In some parts of the country there has been difficulty owing to the mild weather in getting the logs to the streams and lakes and there may be a shortage of water in the spring, preventing all the cuts getting to the mills. Many farmers, who took out hardwood logs last winter, have not gone into the bush at all this season and this will result in decimated supplies.

Then reports come to hand that certain mills in the province of Ontario will not be running this season. Operators are not inclined to be plungers and desire to move on a sane, conservative basis. There are other features looming up such as the threatened duty on lumber exported to the United States and the uncertain outlook concerning British and European demands.

In the meantime it is felt that the last half of 1921 will be better than the first half and that, on the whole, there is in all likelihood to be a fair year's business. Much will depend on the building situation which can not as yet be accurately gauged and the general industrial situation.

It is not often there appears in the daily press an article so fair and considerate of the lumber interests as the following, which was printed recently in a Toronto paper, and is a good summing up of the general situation:

Lumbermen see signs on the business horizon that lend color to their belief that trade conditions are improving. The Canadian lumber operators and wholesalers are almost convinced that prices have struck bottom. Purchasers are showing more interest in the market, and this in itself is viewed as a promising sign of the times. The position of the lumbering business all over the continent is that falling prices have shaken confidence, and until stability is restored buyers feel warranted in pursuing the cautious policy. The underlying feeling is one of cheerfulness, and close observers claim that there has been improvement within the last fortnight.

The retrograde price movement of the last five months has subtracted very materially from the value of stocks in wholesalers' hands, and on this they will be obliged to take a loss. One British Columbia operator, in announcing recently his intention of closing down his mill until present stock had been moved out, declared that it was more advisable to take the loss now than later. He also intimated that production costs on the Coast would be considerably lower when cutting was recommenced because of cheaper and more efficient labor, both for logging and in the mills. It does not appear so apparent that lumbering costs in the East are substantially reduced as compared with last year. There has been some increase in efficiency, but not in the early part of the cutting season. In summary it is fair to assume that production costs have been reduced, but not to the extent uninformed opinion would have it.

The British market indications are that more buying may be expected from that direction, but that prices will have to be on a lower basis. So far as domestic and American trade is concerned, the first essential is stable prices that will inspire confidence in the minds of the buying interests. After that assurance of stability is created, the lumber industry hopes for more activity.

United States

There is little change in the situation so far as the general lumber market is concerned. The trade in wholesale and retail lines is both slightly better, and encouraging signs are seen in a number of movements. A cautious attitude still characterizes the purchasing public, and while there has not been a deal of expansion in some activities there is evidence on all sides from the number of enquiries and the trend of events that things are going to pick up in the near future and that 1921 is destined to be a fair business year after all.

There are very few things of interest in the hardwood situation; at least they are of the more or less intangible character of indirect influences and cannot be termed definite indications of improvement. There is a slightly better feeling in the automobile trade and this is reflected in the furniture industry to some extent. In numerous instances in these, and other sections of the wood-using industries, factories are increasing their running time to some extent, and in that proportion are cutting into their lumber stocks more heavily. Some purchases of lumber occur, but there is still a disposition to buy only for the most pressing needs.

While production in the Southern field has shown an increase recently, reports from that section are that this is due entirely to the necessity of cutting logs that would otherwise decay. Manufacturers are disposed, it is asserted, to close operations as rapidly as this necessary cut is completed and even greater contraction in the output is anticipated by some authorities, unless improved demand intervenes.

From the South there are many rumors in regard to southern pine. Some mill centres report a very quiet market following the spurt which occurred last month, while others report continued business activity which, though not to be compared with normal, still is quite satisfactory and indicative of better times to come. On the whole, it appears that the southern pine market is in a better position than recently. Orders usually are for small lots, but the aggregate shows up very well. Inquiries, too, are coming in a much improved volume and southern pine distributors and manufacturers generally are quite well satisfied with the outlook. Prices in the meanwhile have responded to this improvement in current and prospective market conditions only on a few items, generally remaining on the basis which prevailed prior to the January spurt. An increased demand for export stock is reported from certain sections and railroad and car material seems to be moving a little better than recently. Further adjustments in the wages of mill operatives are constant occurrences, they showing a willingness to accept the cuts which are so necessary, especially under present market conditions, rather than face shutdowns. As long as retailers persist in maintaining high levels of values, labor will fight every effort to reduce wages, says the Mississippi Valley Lumberman. This has been especially pronounced in the case of the employees of the railroads. In many parts of the country employers of labor in the building trades have announced a lower schedule of wages, but activity has not been resumed, and it is yet to be determined whether or not labor will accept these reductions without protect. Employers contend that they cannot go ahead unless labor comes down, and so it seems to be a question whether or not work will start.

Every possible effort is being made to induce the public to commence much needed building operations, but difficulty appears to be present in efforts to show the public that costs have been properly reduced. In many parts of the country material men and contractors have joined in campaigns of education to inform the public of the situation, and reports from some of these points are encouraging. The National Lumber Manufacturers' Association is advertising all over the country that lumber has come down to a level which makes building possible, and retail merchants of building material are offered advertising matter to use in their local papers. The Chamber of Commerce of the United States has also started a home-building campaign, and all of these efforts combined should seen commence to show results.

The lumber market is not yet stabilized, as is evidenced by recent public announcements of further reductions in prices. These

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

announcements may be nothing more than a levelling down of some high prices to the point reached in quotations which have been current for some time, but the news gets into the daily press and causes uncertainty among the public. If only the public can be induced to believe that building costs are reasonable, and if money for financing building can be made easier to get and at lower interest rates, activity would be soon resumed. Dealers in building material are being urged to press collections among the farmers, if only to liquidate a part of their obligations. If they do this, and are successful, money will be started into circulation, and business in all lines will soon show the good effects.

Great Britain

Generally, conditions show but little variation from what has prevailed during the past few weeks. Prices are inclined to fall still further, and the uncertainty of the future, combined with values being on the decline, prevents many merchants from increasing their stocks. On the other hand, merchants who hold large stocks are showing more disposition to meet the market, and to accept prices which would have been refused a month or two ago. It may be that during the spring, to which everybody is looking for a great revival in trade, that prices will again advance, or at any ratae remain on a fairly stationary basis, and when this time arrives there should be more inclination on the part of consumers and dealers to take some risk in buying for speculative account.

Probably because it is almost the cheapest thing in the market, sales of spruce seem to have been making a little more progress in London. Prices for St. John quality, however, are very poor, and anything from £26 to £28 per standard for 7 in. is quoted for lines. Some sales of Quebec spruce have also been made at under £30 for 7 in. These are wholesale figures, and considerably better results are obtained for little parcels which are wanted for particular orders. There is just now a greater difference than ever in the wholesale and retail prices; or perhaps we should say in the prices which merchants will pay when they purchase for stock and the prices which they will pay when they purchase a parcel for a particular order. The reason for this is that many firms are determined to purchase nothing except what they have already sold, and consequently the range of buyers for large lines is very limited.

It has been a long time since the drop in prices began in the wholesale markets. The first consequences of this drop were restricted trade, followed by unemployment. To buy in a falling market is always dangerous, and therefore retailers refused to purchase, held their stocks in order to avoid a loss, and finally were compelled to give way.

In hardwoods and mahogany there is a general undercurrent of optimistic opinion that matters will slowly improve, and that before long we shall see a gradual, but perhaps moderate, improvement shown in a steady expansion of current business.

The auctions disclosed no eagerness on the part of buyers to acquire stocks. The better classes of the Honduras mahogany logs sold fairly well, but for the lower grades there was only a moderate inquiry, and, all round, rates were on a lower level. This may only be a passing phase, however, in regard to this wood. The stocks that are held in first hands are by no means unlimited and, offered in moderate quantities, as they doubtless will be, amounts such as can be absorbed, even by the present limited consumption, there is no fear that any pronounced reaction in rates may be looked for. This wood, as it usually does, will hold its position, and more especially when it is considered what an extremely limited supply of other and competing descriptions there are in the market at the present time.

New housing schemes submitted to the Ministry of Health during a recent week numbered 32, bringing the total number of schemes submitted to 11,510. The schemes approved now number 8,921, and comprise about 57,572 acres. Forty-nine lay-out schemes were submitted and 53 were approved during the week, bringing the total number of lay-outs submitted to 7,159 and number approved to 6,582. House plans representing 1,313 houses were submitted and plans for 747 houses approved. The total number of houses represented in all plans now submitted is 288,655, and in the plans approved 272,129. During the week tenders were submitted for 1,648 houses. Tenders for 936 were approved, bringing the total number of houses in tenders submitted to 186,791, and in tenders approved to 172,340. Contracts have been signed for 141,811 houses.

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

St. John Reports That Conditions Are on the Mend

There is a slight improvement in the outlook for the lumber trade at St. John at the present time. Many people seem to be pessimistic regarding the future, but at its foundation, the lumber business in general in this section of the country is in pretty fair condition, as the bulk of the sawn lumber is held in the hands of strong financial concerns, who have a good reputation morally and are well thought of by the banks. The banks in general are standing back of these exporters realizing that there is nothing gained in exporting either to United States or to the British market and that under the present conditions, it would be only making a loss for all concerned and weakening the values of the lumber in the exporter's yard and also weakening the credit of the bank, who might have advanced money to carry on these operations and purchasings of lumber in large quantities.

There is a slight improvement in the outlook for the lumber ish Government carrying about four million feet, which is an old Government contract work; a sailing ship loading at St. John which will carry from seven hundred thousand to one million feet. There are also some small shipments by liners under reduced freight rates. This is really the first movement of any stocks from St. John since last fall. Of course, this is only a small quantity compared with the stocks held here, but nevertheless it is getting a certain amount of it out of the country and off the wharves of some mills at this port. This will give the saw mill operator a chance, should he have the money to work with, to do some sawing next spring.

There are practically no rotary mills running over this country and a few of them who are running have a very cheap log and are shipping a limited amount of 2-inch and 4-inch on the American market, which is netting in the vicinity of $32.00 per thousand at point of shipment. This, of course, is showing a great depreciation from last year's prices at this time. There is to some of these operators a small cash profit at these prices and those who are operating are people who have the means to do so, without any financial help from the brokers who really are refusing to finance these men under any conditions, claiming that they cannot get cash from the banks for this work.

The log production has not been at all increased and there is practically no work going on in the woods to amount to anything. Men are coming out of the woods every day, whatever yarding was being done, having been finished the last week. Conditions for hauling off the yards are fair. There is not any great quantity of snow to amount to anything in the lower sections of the river, but at the same time work is going on more efficiently than for many years past. On the upper waters of the St. John work is progressing very favorably and by the end of the month the yards will be all hauled off and work will be finished.

More inquiries are coming from the New England market than for some time past, which goes to show that there is a limited revival of trade. During the last month the New England cotton and textile trades have opened up their mills and many numbers of people have returned to work at reduced wages. This will put more money into circulation and as each plant begins to operate again it puts new life into things, which will finally go toward improvement in general trade conditions.

Southern yellow pine mills are forced for financial reasons to dump their products on the New England markets and this is hurting eastern spruce manufacturers to some extent, but if there should be the least revival of trade, the southern manufacturer will at once jump his prices. It is said by the large brokers in the New England districts that yellow pine trade in general is not in the hands of parties who stand behind their contracts. The broker is always fearful of having cancellations and therefore prefers to trade for spruce as it is in the hands as a rule of very reputable operators. Furthermore, the yellow pine trade is much below the western fir trade; the larger amount of manufacturing done upon the log the greater the cost, and the smaller the stock the greater the price.

The English market shows no greater weaknesses, neither does it show any greater strength. It is simply standing still and trying to study out how to absorb the government stocks being shipped forward at the present time from Canada. When these are well shipped

Wycliffe, B.C.

and delivered on the docks in Great Britain, a better understanding will be reached by the British timber brokers. They will then know what to expect both as to the quality and the price of this material. Many millions of it has been uncared for by the authorities in charge in Canada and has depreciated so that it is in among goods worthless and not fit for real good work of any kind.

The only sizes, which are in demand in Great Britain, seem to be 2 x 7; 2½ x 7 and 3 x 7, which is going into the construction of cars and is used largely for car bottoms, etc. It has left as high as $37.00 along side ship St. John, and the demand continues fair.

Locally, the building trade is at a standstill, which is not unnatural for this time of year. There is very little repair work being done, the landlords preferring to wait until spring, when they can do better work and, anticipating some reduction in lumber, they are holding off.

British Columbia products such as sheathings and floorings are much lower than a year ago and should have some effect in the stimulation of building as a great deal of this stock is used for finish.

The high rates of freight from British Columbia to the provinces will make less of a competition against eastern spruce and pine than ever before. In fact, it is felt that the easterner is in the most solid position than he has ever been in. It is admitted, of course, that the stocks are abnormal, but they will finally work off, and the stumpage is increasing in value from day to day. There is no reason why the lumber operator in eastern Canada should be in any way discouraged.

Pulpwood is moving freely out of the eastern section of the provinces. While prices have depreciated to some extent, peeled wood is in fair demand. The only trouble is that the pulpmills in the United States are not paying their debts to the Canadian operators as they should.

Montreal Report Sales as Picking Up Somewhat

Although business in Montreal is by no means brisk, it has picked up a little. Sales, as a rule, are not large individually, but they are more numerous, while inquiries have increased. Most lines have felt the slight improvement. On the whole the outlook is fairly satisfactory, as there are indications of a good building season. It is, however, too early to say anything definite as to future—sufficient to say that almost without exception wholesalers believe that there will be a substantial revival in trade.

Reports from the province favor a tendency for building materials to go slightly lower, but against this some supply houses are of opinion that the bottom has been reached.

The provincial government has squashed the movement for raising $20,000,000 for workmen's houses. The premier told a Montreal deputation that "lending money to buy houses is a new fad. If we did that, don't you think the Government would be getting to be a competitor of those who invest money to build houses and would it not discourage these people?" As to the Federal Housing Act, the premier declared: "We don't need to be convinced that the act will not work. We knew it at the outset, and I believe they framed it in such a way that it should not work."

The Government promised to consider a proposal that municipalities be authorized to raise loans for housing purposes. The position, as far as Montreal is concerned, is that for the present nothing is likely to be done, and that another season will pass without a house being built except by private individuals.

The prospects for exports to the United Kingdom do not look very promising, as stocks are too large and prices too low to encourage shipments from this side to any extent. The Government stocks in the Maritime provinces are being slowly sent to the other side.

Prices Hold Firm in Ottawa with Trade Quiet

Very little by way of general change occurred in the Ottawa lumber market during the past month. Prices continued to hold firm, stocks remained about the same as they had been and the number of orders and inquiries did not increase. Business on the whole remained dull, and the prospects did not indicate that the pick up of trade would manifest until the middle of this month at the earliest.

The dealers continued to do pretty much the same as they have been forced to do since the incoming of the year—sit back and wait—and trust to the Lord that in the meantime, their competitor—or competitors, are keeping the same stiff upper lip, and sitting tight on prices.

The manufacturers, wholesalers, and retailers have all had to patiently accept considerable losses, owing to the lack of business without trading going on. Their overhead charges do not stop, and it is these charges as well as the loss incurred on prospective sales and profits that is hitting the lumber trade to-day. However, the lumbermen as a class have been good sports in the past and have gambled before for big stakes, and know how to accept losses without whining.

If there is one topic above another that will start the average Ottawa Valley lumberman, seeing red, is to question regarding "cutting prices." "What is the use of trying to cut prices? You are only adding to losses you cannot already help, and besides cutting the price of lumber cannot force sales when there is no business to be had at practically any price" was the emphatic explanation recently handed out by a member of the trade.

It is already a foregone conclusion in the trade that the output of the Valley this year is going to be considerably less than last, and especially in the white pine grades there are sure symptoms of not being any over production. Even the spruce and hemlock lines which have been also slack, and have according to some reports outside of the Valley weakened in price, are not going to be top heavy.

With the prospect of building taking a decided stimulus this spring, it is hard to figure out, where lumbermen can afford to think sanely of dropping prices, until next year's cut comes into the market, and a further reduction has been made in labor costs. Lumber to-day, is at least worth what it cost the manufacturer to get it during the last two or three years, and though food costs have began to go down, that is no argument why the lumberman is not entitled to a just return on his high cost production stocks.

While nothing has yet been done outwardly in the matter, it has been spoken of in the inner circles of the manufacturing trade that sawmill labor costs, are in line for a reduction upwards of twenty per cent this season. Woods wages may also take another tumble, while with the woodworking plants and factories unless they are rushed with orders, the indications are that labor is going to get what is asked for last year,—an eight hour day, instead of nine or more hours.

Woodworking factories including the large woodworking plant of James Davidson's Sons resumed operations. The Davidson plant re-opened working on an eight hour per day shift. The opening of this plant was not caused by an increase in orders, but for the preparation of stock, some of which it is anticipated will be used in the construction of the new St. Jean Baptist Hall on Somerset St. which it is stated, will cost in the neighborhood of $75,000.

The erection of a new Canadian Bank of Commerce Building on Sparks Street, and the completion of the large theatre being erected by the Famous Players Corporation on Queen Street, promise good indications for early spring building.

During the first part of the month the property formerly owned by the W. C. Edwards Company on Sussex Street, passed to the Gatineau Company Limited, with the Riordon Company as the holding company. The transaction involved the payment of over $1,700,000. A new W. C. Edwards Company for the wholesale, sale of lumber has been formed, and the stocks formerly owned by the W. C. Edwards Company have been transferred to it. Mr. S. C. Thompson, for many years connected with W. C. Edwards and Company, has been appointed Ottawa manager of the Gatineau Company Limited.

Rail conditions remained satisfactory and there were plenty of cars to take care of any shipments. Lath and shingles remained quiet.

Labor conditions, both in the woods and with the factories, showed little or no change, remaining plentiful.

Weather conditions in the woods continued rather poor, through the absence of sufficient snow and cold weather to put the woods roads in proper shape. The poor quality of some of the woods roads, is already making itself seriously felt on the log output, in certain localities.

Lumbermen Do Not Want Early Break-Up

Woods operators getting out sawlogs, pulpwood and ties at points over the Thunder Bay and Rainy River districts in Ontario, are watching weather conditions with the deepest anxiety.

Enormous losses would be entailed by operators in the event of an early breakup this spring, as large quantities of timber products would be left in the woods, spelling disaster to the smaller contractors especially. The lack of snow has already in some places in the bush, caused a halt in the hauling of timber products to the railway tracks and operators are stated to have already been put to some expense in maintaining working staffs while waiting for sufficient snow to haul materials out. Woodmen agree in the statement that the output of forest products would have been far below normal this winter at the best and in the event of any proportion of the cut being left in the woods contractors for ties and pulpwood especially would be affected in filling their orders. Supplies of lumber in mill yards and retailers' hands are said to be comparatively light.

Stopping Decay in Structural Timbers

R. J. Blair, Montreal, Canadian Forest Products Laboratories

"The Causes and Prevention of Decay in Structural Timbers," was the subject of an interesting address by Mr. R. J. Blair at a meeting of the Montreal branch of the Engineering Institute of Canada recently. The address was illustrated by a number of photos taken in Canada and the United States showing the decay in timber, caused by fungus growth.

Mr. Blair said that decay takes place in timbers which are either already weakened by fungus growths before being set in the building, or in which the growth is aided by an excess of humidity in the air near the timbers. One instance of the last was a cotton mill in which a cold water pipe ran for several hundred feet just below the cross-beams. This pipe lowered the temperature of the atmosphere in its proximity sufficiently to raise the percentage of the humidity enough to start fungus growths, which in turn decayed the timbers to such an extent that they had to be renewed throughout the length of the building. Another instance which would have produced disastrous effects if not checked in time was a building in which one of the main supporting timbers was resting on the ground as a base. The moisture started decay, and the foot of the pier began to crumble away.

This decay probably attacks roofs more than anything else, as moisture is more liable to work its way in and cause decay. The difference of temperature between the interior and the exterior surfaces, and the consequent varying humidities, creates a situation under which decay progresses very favorably.

Mr. Blair stated his objections to a theory held by some architects that a dead air space between the interior and the exterior surfaces prevents such decay, by showing examples in which decay was as rampant as in any other type of roof. In his opinion, the most successful roof is one in which the upper part of the roof (boarding, paper, tar and gravel, etc.) is of sufficient thickness to maintain at its inner edge a temperature of 59 degrees under the lowest atmospheric conditions. At this point a water-proofing layer should be introduced and below that the wood boarding should be treated chemically to keep out moisture. This should be of sufficient thickness to maintain at the surface in contact with the weather-proofing a temperature of 59 degrees under the highest atmospheric conditions. Another reason for decay setting in is the use of green, unseasoned timber.

As a means of overcoming these growths of fungi, all moisture should be drawn from the timbers and the place in which they are used made as dry as possible. If this method of defence fails, the timber after being dried may be treated with mercury chloride. This failing, the building should be wrecked. Timbers which are under water all the time are safe.

Hopelessly Handicapped by Swedish Lumber

The Dominion Industries, Ltd., a company formed for promoting interchange of trade, commerce and finance between Canada and Great Britain, is one of the victims of the indiscriminate dumping that is now so prevalent in this country, according to word received from London, Eng.

"We are being hopelessly handicapped," said one of the directors. "We have an endless supply of beautiful lumber, and are specializing in all kinds of wood joiners, but Sweden is dumping a large quantity of material.

"A thousand loads are imported into England from Sweden for every load that comes from Canada. Naturally, our freight charges are heavier, and although the quality of our material is better, we are being frozen out.

"The Trade Mission promised us many things, but their promises have not been carried into effect. It would mean much to Canada if something could be done to encourage the import of these manufactured goods. It would also mean a great deal to the Empire."

Believe Lumber Business Will Be Fair

Chappell's, Limited, of Sydney, N.S., who are widely-known lumbermen, woodworkers and builders, having sawmills at Sydney River and Oxford, N.S., say that the past year was the best they have had in business. The outlook for 1921 is rather uncertain. They think that demand will be slow till after May 1st and that the year will close, showing good business, at least during the last six months.

Continuing, the firm say, "A decrease in wages of 20 per cent. has been put into effect in the Dominion Iron & Steel Co., and the smaller manufacturers are considering a reduction of from 10 per cent. to 15 per cent. The housing situation is not ideal, but is not as acute as it will be when business opens up in the spring.

"We understand the lumber output in Nova Scotia and New Brunswick is generally lighter than in past years, and we also notice that many lumbermen are offering to sell parts of their cuts at prices lower than during the past few years during which time many small operators have held for the speculator, who is not now so much in evidence. In conclusion, we would say that the outlook for the next few months is only fair, but the prospects are good for the balance of the year."

Will Use Scout Airships For Forest Survey

Now that the R-34 is a heap of ruins and the British Government is definitely going out of airship operation, it may be of interest to Canada, says a recent despatch from London, to learn that the R-34 was offered to the Dominion as a gift by the Air Ministry. The offer was declined with thanks. The modern airship seems to be a species of white elephant and one productive of even heavier expenditures for maintenance than the King of Siam's bills for feed for his costly pachyderms. When the cost of the R-34's upkeep was mentioned to the authorities of the Canadian Air Branch, the sum staggered them, and the offer was politely but firmly refused. Canada has, however, accepted twelve airships of the size of the scout type, which are about 150 feet long and are themselves rather expensive pets, inasmuch as the steel hangars required for their accommodation cost about $100,000 each, or a total of $1,200,000 for the twelve machines. The British Air Ministry has also given Canada six kite-balloons with which experiments will be carried out in connection with the detection and fighting of forest fires. The total value of the air material presented to Canada, including one hundred airplanes, of which a number have already been delivered, is over one million pounds sterling.

Message to Business Men

This is the time for every brain and hand to utilize every atom of energy, every constructive thought, every helpful suggestion that will furnish more power to the business motor, says the Federal Advertising Agency of New York.

This is the time when the generals of business must take off their coats, roll up their sleeves, spit on their hands and re-vim every department, inside and out. 100% management must register 110% and more.

This is the time when raw material men must join forces with manufacturers, without fear or favor, to keep production on an even keel, with both hands on the wheel.

This is the time when manufacturers must co-ordinate their interests with wholesalers in a will to win by working together.

This is the time when wholesalers must co-operate to the fullest extent with retailers by the suggestion of better selling methods. Showing a merchant how to sell more is to show him how to buy more.

This is the time when the entire sales organization should be on the road selling prosperity, and star salesmen should not ignore the one-night stands. Beating the brush for business is more profitable than killing time at home.

This is the time when retailers must take advantage of every legitimate means of inducing business by catering to the public needs at equitable prices for dependable goods. Business may be encouraged when it cannot be forced.

This is the time for salespeople behind the counter to remember that truth, courtesy and smiling service are the three great assets of personal success.

This is the time when the business whiner should be ostracized, the grouch banished, the discouraged inspired.

Inertia begets inertia: Every complaint imagines another.

Super-Effort in the sanctum, office, factory, on the road, behind the counter, will do more to blow away the clouds of uncertainty and put business on a soundly economic basis than all the theories that ever have been or ever will be expounded.

This is the time—let's all work for the new era of real prosperity.

Mr. Chew Honored by His Staff

Manley Chew, Midland, Ont.

Manley Chew, of Midland, Ont., who for many years has been prominently associated with the lumber industry in the Georgian Bay district, left recently on an extended trip to France, where he will enjoy a well-earned holiday of several months. It will be remembered that some time ago Mr. Chew disposed of his limits, mills, stock and yards to G. Mason & Co. of Manchester, England.

Previous to the departure of Mr. Chew abroad, he was tendered a banquet by his former staff at the Ontario Cafe, Midland. The banquet hall was artistically decorated by "the boys" with flags and bunting, and Mr. Chew, as the guest of the evening, was presented with a suitably-engraved gold cigarette case, accompanied by an appreciative address. The address said in part: "Not only to us but all in your employ have you extended a generous and sympathetic interest, and we dare to voice the sentiments and hopes of the citizens of Midland—this town in which you have spent the greater part of your life—that when you return from your travels abroad, you will without delay, resume your former place as one of the town's most valued residents."

Fred Tuer, who has been twenty years in the employ of Mr. Chew, read the address, which was prepared in water colors. It contained a picture of Mr. Chew's sawmill at Midland in the upper left-hand corner, and was very attractive.

W. H. Shaver was toast-master of the evening. Mr Chew ably responded to the toast of "The Staff." Everyone expressed their good wishes for Mr. Chew and trusted that he would have a successful and pleasant sojourn abroad and would return to resume his place as one of Midland's most enterprising and progressive citizens.

Among those who spoke during the evening were: Miller Ryan; Fred French; J. A. Parks; David Lamb; Capt. Wm. Cunningham; Ed.; English; Chas. Gentles, and others.

Big Shipments of Lumber to Orient

During the past few weeks there has been a marked revival of confidence in the coast lumbering industry, and logging camps and mills are beginning to reopen after a shutdown of a few months, says a recent despatch from Vancouver. One factor is the strong demand from the Orient for B. C. lumber. Between the first of the year and the first of April, the Canadian Robert Dollar Company will ship about 12,000,000 feet of lumber and further orders are booked for. The sudden activity in Orient shipments of lumber is due to the decline in freight rates. Last fall the rate was between $25 to $30. Now it is down to $12.50, which is regarded as the rock bottom rate. The lumber export trade is being further boosted by the big cargoes that are being taken to Australia, South Africa, and to Great Britain by the Canadian Government freighters. Millions of feet are on the way, and the orders already booked will keep several of the B. C. mills busy for several months to come. As a result of the contracts that have been received by General J. W. Stewart on the Gold Coast of Africa, it is believed that large lumber orders will be placed by him for the large amount of construction work that is involved in his contracts. A renewal of orders is expected soon from the prairie provinces, and lumbermen are preparing to meet the demand. A number of sawmills both here and on Vancouver Island have resumed cutting and it is hoped that by the first of April nearly every mill in the province will be running in full blast.

New Brunswick Cut Will Be Small

Estimates received from scalers reaching the Department of Lands and Mines indicate a cut of approximately 200 million feet of lumber upon the Crown lands of New Brunswick this year.

This information was given out recently by Hon. C. W. Robinson, Minister of Lands and Mines, who in connection with the work of his department had spent considerable time in going over the returns which have lately come in through the forest service branch showing the actual scale as completed up to a recent date and the estimated quantities for the balance.

Last year the cut of lumber upon New Brunswick's Crown lands was about 360 million feet and the curtailment of almost fifty per cent. that has been made is about the same as has been made in the case of privately owned land, although not so large in many cases. One reason, it is explained, that the cut is not curtailed so much on Crown lands is that some large blocks which had been hit by the spruce bud worm have had to be cleaned out immediately to prevent further damage.

Hon. Mr. Robinson estimates that the revenue from the Crown land stumpage rates will not be less than $1,000,000 this year, as compared with $1,200,000 last year. The increased stumpage rates became effective last August and the $5 per thousand rate is being paid on this winter's lumber operations on the Crown lands for the first time.

What the Lumber Dealer Has Done

A recent issue of a trade journal advised retail lumbermen to get close to the local editor and pointed out that it would be a wise plan for the dealer to invite the newspaper man to lunch and then take him to his lumber yard and then show him what he had in stock, explain price reductions that had been made, etc., thus convincing him that as far as lumber is concerned prices have settled to a level that ought to encourage the resumption of home building in the community. Commenting upon this, the "American Lumberman" says:

The average newspaper editor desires to be absolutely fair and as a rule will go farther than anyone else in the community to encourage any movement looking toward the betterment of that community. One reason why local editors have not always co-operated with the lumber dealers to any appreciable extent has been because the lumber dealers themselves have stood aloof and have made no particular effort to gain the confidence and co-operation of the editor, and in fact have too often assumed a critical attitude toward the local newspaper. Happily this situation is being changed and there is being brought about a better feeling of closer co-operation between the local editors and the lumber dealers that can not fail to be of benefit to their communities. An interesting example of the friendly attitude of the local editor that recently occurred in Moberly, Mo. The Democrat of that city, in a leading editorial under the caption, "Visit the Lumber Dealers," recently said:—

> No business men can do more to bring about an era of house building than the retail lumber dealers. They have started well by announcing a reduction in the price of lumber of 30 to 50 per cent. The task they have in hand is to convince all the public that they have practically cut the price of lumber in two and that it will certainly continue stable during the season. If iron, hardware and cement men would do the same the other expenses of building would no doubt be lessened accordingly. While labor can not be expected to come back to the old prices, yet without doubt there will be reasonable concessions as building materials and cost of living are reduced. No one should want to see labor back to the old standard, as every community best prospers when all labor is liberally paid. If the retail lumber dealers will diligently and clearly by the use of plenty of printer's ink show that prices are and will continue to be greatly reduced, all other building expenses will be compelled to meet them, at least to a reasonable degree. By thus doing, they can make the year 1921 one of the most prosperous building years Moberly has ever experienced. There is plenty of money here to build houses and there are plenty of people who want to build, provided they are convinced that this year they can build at a price that would not be greatly reduced by waiting until next year. In fact house building would go ahead with a rush if everybody could be reasonably certain that expenditures for building would be worth as much next year and during the years to follow as when made. Let all those who want to build new homes or repair old ones go to the lumber yards and ascertain for themselves how prices of lumber have been reduced. We believe that on investigation they will find that the lumber dealers are doing their part toward bringing building prices back to normal. If this city is to prosper during this year there must be labor for all and therefore building should begin early. A few houses started at once would be the cause of many others being built, a lively building spirit would pervade the entire community and the fear of hard times would soon vanish and no longer be heard throughout the land. Let us start the building boom early and put Old Man Gloom out of a job.

Taking into consideration, the lumber situation in the U. K., the export firms shipping from the port of Montreal had a fair season. The total was 109,355,497 feet, a decrease of 35,020,285, as compared with 1919.

EDGINGS

Millette & Fils, Lawrenceville, P.Q., sawmill operators, recently dissolved partnership.

The partnership known as Parrsboro Lumber Co., Parrsboro, N.S., has been dissolved.

Edward Dates, a lumberman, was killed by a falling tree at Shabaquia, Ont., recently.

The partnership known as the Continental Lumber Co., Montreal, P.Q., has been dissolved.

The Transcontinental Lumber Co., Montreal, was recently registered with A Selander as proprietor.

The sawmill of McElman Bros., of Oxford, N.S., located in East Leicester was recently destroyed by fire. The loss is $10,000.

Several shingle mills throughout the Everett, B.C., district, which had been closed since the first of the year, have resumed operations.

The Pioneer Lumber Company, Limited, has been authorized by supplementary letters patent to increase their capital of $100,000 to the sum of $350,000.

Harry Rowe, who for many years was engaged with the James MacLaren Company, Limited, at Buckingham, Que., passed away recently after a long illness.

The Reliance Lumber Company, Limited, have been authorized by supplementary letters patent to increase their capital of $100,000 to the sum of $350,000.

The Canadian Government Merchant Marine steamer "Canadian Exporter," recently left Ocean Falls, B.C., with 700 tons of pulp and paper for Australia.

Canadian Pulpwood Corporation, Limited, have been authorized by supplementary letters patent to increase their capital of $1,000,000 to the sum of $1,500,000.

The Canadian Tie & Lumber Company, Limited, Toronto, were recently authorized by supplementary letters patent to increase their capital of $150,000 to the sum of $300,000.

Dryden Paper Company, Limited, Dryden, Ont., were recently granted a provincial license providing they do not use in Ontario a larger amount of capital than $3,000,000.

According to a press despatch from Port Arthur, Ont., lumber dealers in that city and Fort William recently reduced prices twenty five per cent. on all dressed and building lumber.

The Kaministiquia Lumber Ca., Limited, successors to the Pigeon River Lumber Co., Fort William, are erecting a new planing mill and woodworking factory. Good progress is being made on the construction.

The steamer "Waban," which is one of the fleet operated by Struthers & Dixon, Seattle, recently took a full load of railway ties from British Columbia points to the United Kingdom. About 4,500,000 feet of ties were loaded.

A provincial charter has been granted T. H. Hancock, Limited, Toronto, with a capital stock of $1,000,000. Mr. Hancock recently completed one of the finest and most attractive lumber offices in Canada at 1372 Bloor St. W., Toronto.

The town of Kipawa, which is the Riordon Company's model town, is asking the Provincial Legislature to have its name changed to Temiscaming. This is the town established for the employees of the new sulphite mills of the Kipawa Fibre Company.

A bill empowering the Lands Department to set aside Crown lands for reforestation purposes and to secure agreements respecting the use of privately-owned areas for the same purpose was introduced by Hon. Beniah Bowman, in the Ontario Legislature recently.

The lumber cut of Chappell Bros., of Sydney, N.B., will not be as large this year as last. This winter only a few men are employed in the woods by this concern, a considerably smaller number than last. The timber already cut is now being taken to the mill.

Great damage was done to the standing timber on Vancouver Island by the recent wind storms, according to reports just brought in by cruisers who have gone over the devasted areas. It is said that from 5 to 10 per cent. of the best timber of the island was destroyed.

The R. Laidlaw Lumber Co. has sold its planing mill building at 259 Spadina Road, Toronto, to Langley the Cleaner, who will convert the structure into a clothes cleaning establishment. The Laidlaw Co. will continue their retail lumber yard on the site, at least for some time.

McClung, McLellan and Berry, are a new company now operating at Kinglake, Ont. They report that prospects for the coming season are good and that they have a large quantity of dry hardwood on hand as well as a considerable amount cut during the past two or three months.

Durham Lumber Company, Limited, Montreal, was recently incorporated under provincial charter to manufacture and generally deal in lumber, timber, pulpwood and other wood products. Capital $49,000. Two of the incorporators are F. Gallagher and J. E. Duckett, solicitors, both of Montreal.

A hockey stick was the means of saving the life of the 12-year-old son of Frank Anglin, a leading lumber merchant of Kingston, Ont. The boy was skating on the harbor, and broke through where ice had been cut a day or so previous. He put his stick across the ice and remained afloat until rescued.

Exports from the city of Vancouver to United States points during the past year totalled $53,000,000. Of this amount paper and pulp absorbed $10,000,000, while the balance was made up of lumber, shingles, poles, canned fruits, fish and ores. The mineral export was valued at more than $11,500,000.

One of the bright spots in international relations was told in Vancouver by A. L. Clark, a Dallas, Tex., lumberman, whose interests extend all the way from the Douglas fir of the northwestern corner of the continent to the pine forests of the South. Mr. Clark is the leader in a big fight which the lumbermen of the United States are waging against a proposed tariff against the importation of British Columbia shingles. "Protection!" he exclaimed.

"What do we want with protection? I am operating four plants on the other side and I don't want any protection." Mr. Clark is president of the Vancouver Lumber Company and is interested in another plant on the Coast. He is also president of the Southern Pine Association.

S. R. Rudd, of Arnprior, Ont., has taken into partnership J. H. McLean of Montreal. The firm will hereafter be known as the Arnprior Lumber & Construction Co. and particular attention will be devoted to the development of the planing mill business, the retail lumber trade and building. New equipment is being installed.

Forty-seven members of the New York Lumber Dealers' Association were recently in Vancouver, B.C., investigating the lumber situation in British Columbia, with a view to obtaining supplies. Secretary P. S. Collier said the East is more than ever dependent on the West for lumber, with the gradual extinction of the southern pine forest.

The Hammond Cedar Mill Company's plant at Hammond, B.C., is again in full blast. Mr. Hartnell is continuing his policy of engaging white employees preferentially and has cut down Oriental employment to the minimum. He is sadly handicapped in expanding white labor by the want of house accommodation for such employees with families.

A charter has been granted to Elgin Handles, Limited, with headquarters in St. Thomas and a capital stock of $60,000 to carry on in all its branches a lumber and timber business and to manufacture, sell and deal in wooden handles for tools, implements and machinery of all kinds. Among the incorporators of the new company are George P. Smith and Charles E. Lewis.

The annual meeting of the Provincial Paper Mills, Limited, was held at the head office, University Ave., Toronto, last week and a most encouraging financial statement was presented. I. H. Weldon, President, presided. All the plants of the company at Mille Roches, Thorold, Georgetown and Port Arthur are busy and enjoyed a very prosperous year. The profits for 1920 were satisfactory.

A new company has been formed, known as the Anderson-Miller Lumber Co., Limited, Toronto, with a capital stock of $50,000 to carry on general lumber business. The new concern will take over the hardwood department of the C. G. Anderson Lumber Co., Limited, Toronto. C. G. Anderson is president of the new company, John J. Miller, vice-president and A. B. Lamont, secretary-treasurer.

W. C. Cochrane of Sudbury, Ont., son of the late Hon. Frank Cochrane, was in Toronto during the past week. He is operating three camps this winter at Windy Lake and Gogama and says that he will take out nearly as large a quantity of timber as last year. Not quite so much hemlock will be cut but more ties will be produced. Mr. Cochrane says that the latter part of February was ideal for hauling the logs to the streams and that the roads were in good condition.

The saw mill, which has been erected by John Duignan, at Lakefield, Ont., is about completed and will be operated during the coming summer. The company will have a fair-sized log drive. The Armstrong mill, which was also built and operated at Lakefield in 1920, is taking out a stock of mixed timber for the 1921 season. It is stated that the cut in and around Lakefield will not be over 50 per cent. or 60 per cent. of normal. Up to the middle of February very little snow had fallen.

The annual meeting of the British Columbia Lumber & Shingle Manufacturers' Association was held recently when general reports of the past year were presented and officers elected for the coming year. The retiring president was E. C. Knight, of the Vancouver Lumber Co., and his successor is J. O. Cameron of the Cameron Lumber Co., Victoria; Vive-presidents J. D. McCormack and F. R. Pendleton, Vancouver; Directors, G. H. Hackett, P. D. Rowe, W. W. Harvey, A. Flavelle, A. J. Hendry and E. J. Palmer. The meeting was very short, only routine matters being taken up.

The Beaver Board Companies, who several months ago moved their Ottawa mill to Thorold, making the consolidation one of the biggest in the wall board line in the world, have recently built a new roofing mill at Ottawa, which is said to be one of the finest and best-equipped in Canada. Both of these mills the firm state were planned for increased production this year. The prospects for additional sales in 1921 are bright and will likely tax the additional facilities. The company have recently opened up new district sales offices in Winnipeg and have put back of their products a big advertising campaign.

In order to further encourage the establishment of industries in the province and prevent the exploitation of the natural timber resources belonging to the Crown, it is stated that the Provincial Government of Quebec proposes, when the sale of rights on Crown lands takes place in June, next, to make it a condition that the purchasers shall reforest the land and shall erect and operate plants for the manufacture of pulp and paper within the limits of the province, thus confining the manufacture of pulpwood cut in the province to manufacture within the province and preventing the export to other provinces. The lands will be leased for a term of fifty years.

Abolition of the Commission of Conservation is under consideration by the Government at Ottawa, so it is said, on the ground that it would be an economy and would obviate certain duplication in work. The commission was established many years ago and Sir Clifford Sifton was its head. He resigned and the virtual head is James White, with the status of Deputy Minister. Much work has been done in preparing reports on natural resources and along other lines, but it is claimed that such work is already being done or could be done by the regular department. The matter has come up in consideration of the estimates and the abolition of the commission is not improbable. The staff would be absorbed in other departments and the work it is doing would be continued but without duplication.

That Pacific Coast lumber will dominate the lumber situation in 1925, was the declaration of J. R. Agar at the annual meeting of the New Westminster B.C., Board of Trade. Mr. Agar is chairman of the lumber committee of the board and in presenting his report stated that the last year on the whole had been fairly satisfactory, especially during the first six months. The cut of sawmills in and adjacent to New Westminster was placed at 200,000,000 feet and the shingle output between 300,000,000 and 350,000,000. Mr. Agar referred to the southern pine competition in connection with the higher freight rates, pointing out that the way to overcome this was to use the water route more. He said the total stand of southern pine is estimated at 226,000,000,000 feet and the annual output at 15,000,000,000 feet. On the other hand, on the Coast, California alone has 326,000,000,000 feet of softwood and the entire Pacific Coast 1,674,000,000,000 feet.

A Plain Question

What is the Canadian National Newspappers and Periodicals Association?

And a Frank Answer

For many years prior to December, 1919 all the publications in Canada practically were grouped in one Association, known as the Canadian Press Association. In this Association there were three sections. Daily, Weekly, and Trade and Class. A little over a year ago it was mutually agreed by the publishers comprising these three groups that more effective work could be done for and by each section if separate organizations were formed, and, co-incident with that decision, there came into being the

Canadian National Newspapers and Periodicals Association

In this Association there are incorporated the following classes of publications:

Agricultural newspapers
Business newspapers
Educational newspapers
Religious newspapers
Technical newspapers and Magazines.

Membership in the Association involves certain obligations. Every paper admitted has subscribed to ten rigid Standards of Practice the purpose of which is to afford ample protection to both the subscriber and the advertiser. Every publisher pledges himself, before he is permitted to enjoy the benefits of membership, to

"Consider first the interests of the subscriber," to

"Work for truth and honesty in all departments," and, among other things, to

List of Members

The publications listed below—all of them members of the Canadian National Newspapers and Periodicals Association—should be given preferential consideration in the planning of an advertising campaign. They embrace mediums which appeal to the consumer (either city or farm dweller), merchant, business executive, purchasing agent, technical man, etc. The combined purchasing power of the readers of these papers is greater than that of the total of all other classes of publications in Canada. The facilities of the office of this Association are at the disposal of any firm planning an advertising campaign. We may be able to give you information that will make your advertising dollar buy better value.

"Supply advertisers with full information regarding character and extent of circulation."

These are only a few of the conditions which have to be subscribed precedent to admission to the Association, but they will give an idea of the high standard demanded.

There are already embraced in the membership of this Association a very large majority of the reputable and responsible publishers of the newspapers and magazines classed above, and it is believed that within a very short time, practically all that are eligible—all who can conscientiously endorse the Standards of Practice — will have been enrolled in our membership.

C.M.C.

500 Double End Tenoner

is a heavy, rigid machine, capable of turning out accurate work in large quantities.

All controls are grouped in convenient positions so that the machine is under the instant and effective control of the operator at all times. The cut-off saws are driven independently of the tenon heads by open belts from the main shaft, and are adjustable vertically for depth of cut and to take care of wear of saw blades, horizontally for length of tenon or plain stock, and cross-wise to insure proper belt tension.

This Tenoner will cut tenons up to 24″ wide, from ¼″ to 4″ thick and from 7″ to 66″ between the shoulders. Stock as thin as 3/8″ may be sawn from 7″ to 78″ in length.

Full details and prices on request.

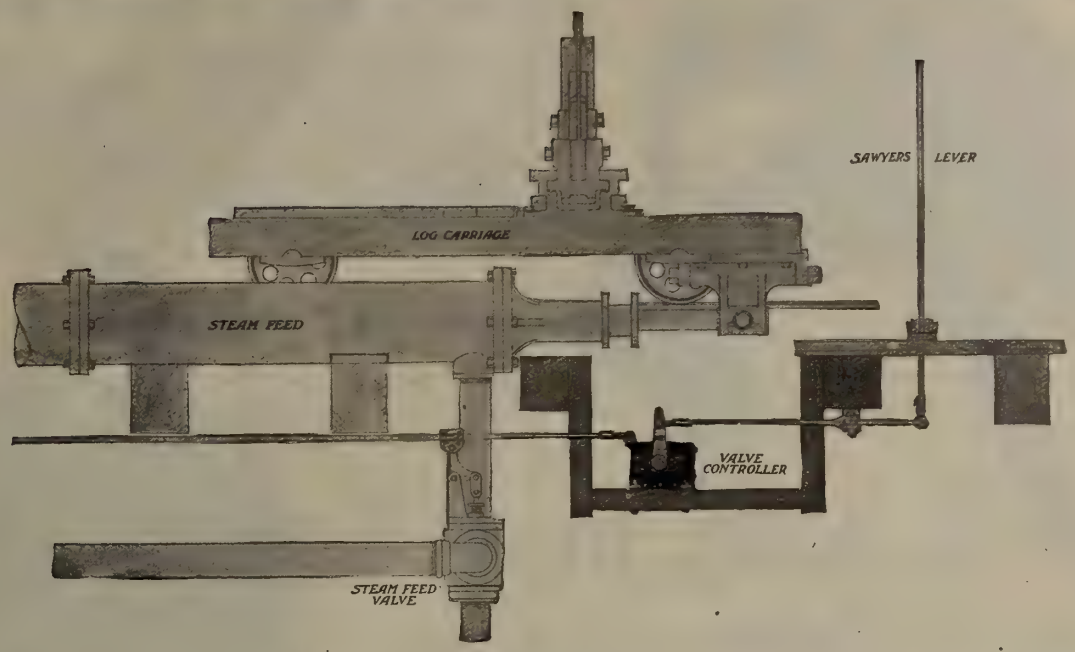
"Proctor" DRYERS



Prescott's Valve Controller

Patented June 8, 1915

The Machine You Have Been Waiting for.

To eliminate every trouble with your Steam Feed Valves install one of these machines.

Six Real Reasons for Doing So:

1—Gives the sawyer the easiest kind of control of valve.

2—Hand lever stays **put,** making them **safe** against any jerk or kick of valve.

3—Gives the sawyer every confidence in handling valve.

4—Will prevent accidents—is easier on the nerves and carriage runs steadier.

5—Water flowing into valves from foaming boilers does not fret the sawyer.

6—This **relief from all troubles** of which sawyers have complained enables them to give closer attention to the logs they are cutting and a better inspection of the lumber they produce.

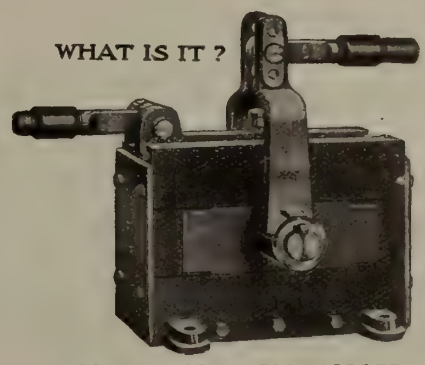
Read what one of the largest lumber companies on the north shore has to say about it.

We are sole Canadian manufacturers of these machines.

Pamphlets with full description and prices on application.

Let us quote you also on our new "Hamilton" Vertical Steam Feed Valves.

WHAT IS IT ?



PRESCOTT'S VALVE CONTROLLER

Waubaushene, Ont., Sept. 11, 1917.
Messrs. Wm. Hamilton Co.,
Peterborough, Ont.

Gentlemen:—

Replying to your inquiry re Prescott Valve Controller, which you sent us last spring to try out: I beg to say that we installed this machine early in April, just previous to starting the mills, selecting the most difficult valve we have to handle, the steam having to travel **through nearly three hundred lineal feet of** pipe to reach this valve, and noting the fact that the pipes are well covered, there is necessarily considerable condensation, and every sawyer knows the annoyance caused by water passing through the valves which violently jars or jerks the lever, sometimes wrenching it from the hand and thereby inflicting serious damage to the machinery of the mill. And now after nearly five months of daily use, I am pleased to tell you that this device has put up all that is claimed for it. There is **not the slightest jar or vibration to be felt,** no matter where the lever is held. It is very easily attached and does not interfere in any way with the free movement of the lever, and the Sawyer, Mr. George Botting, also our Foreman, Mr. W. A. Gill, both speak of your controller in the most glowing terms. I can, therefore, congratulate you on securing an article that will fill many a long felt want.

Yours truly,
(Signed) D. B. Anderson,
Chief Engineer,

A Testimonial from New Brunswick

Below are reproduced extracts from two letters, typical of many we constantly receive from purchasers of the Moreau Barker. Note the date of the second letter:

South Nelson, N. B.

"We have been running night and days (20 hours). On a half night 'shift' we put through 18 cords. This I think, was the best work we did. Our average would be from 20 to 25 cords. We are very much pleased with our Fairbanks' oil engine. It runs continuously for 21 hours every day, driving a heavy haul-up, a 'live roller' a 36" cut-off saw, the rosser, and a knife grinder. We do all this with 15 H.P. We are enclosing a rough diagram of the mill lay-out. It is about 6' from the ground, with one main shaft in the centre. The haul-up is driven by a small set of cogs."

South Nelson, N. B.
December 4th, 1920.

"In reply to yours, we wish to advise you that we have moved our rosser to the winter location, and find that it works just as well or better so far in frozen wood."

Yours truly
O'Brien Ltd.

Gasoline Power in the Woods

Is Cheaper than Man Power

The machine shown in the illustration will haul or load the logs much more quickly than man power, and at much less expense. This has been proven by actual experience in the woods. It is not a theory—but a positive fact. The saving effected by the use of one of these little machines will soon pay for the machine and leave a handsome margin of profit. Moreover this machine will work right along through the coldest weather of an Ontario winter, and is always ready to give you its maximum service at a minute's notice.

We make these machines in the right size for your work and will gladly give you fuller information on request.

NOTE—These machines are made for steam or electric power also.

Marsh Engineering Works, Limited *Established 1846* **Belleville, Ontario**

Sales Agents: MUSSENS LIMITED, Montreal, Toronto, Winnipeg, Vancouver.

Take a peep at the interior of this mill. The result of installing the Sturtevant System is very evident.

What Chance Has Fire Here?

You do not see heaps of sawdust—piles of shavings—nor any accumulation of refuse that may cause combustion and fire.

Not in this mill.

All the machines are free from clogging shavings—the floor is as clean as a ship's deck—and the atmosphere can be breathed without injury to the workers.

This condition is due to the

Sturtevant
(TRADE MARK)

Planing-Mill Exhausters

Like the vacuum cleaner in the hands of a busy housewife—the Sturtevant System by powerful suction removes every speck of dust, shavings and dirt, right from the very edge of the cutting tool, and draws it away to be disposed of elsewhere.

Sturtevant will safeguard your mill against fire—protect the health of your mill staff—and assist materially to increase production. We can tell you much more of interest in our special Bulletin.

Write for it, to-day.

PUTS AIR TO WORK

STUDY AT HOME
and Make More Money

What Is Your Job?

Are you the man who is bossed—are you doing the hard work while some other man gets the high pay for telling you what to do? Why not be the boss yourself? The only difference between you and the men higher up is in what they know what you don't know. They get their big pay and have the easy work because they know how to direct you and other workmen. If you could read blue prints, estimate on work, know how to direct construction, you too would be in the big pay class. Read below how you can get this knowledge and be a bigger man in your line.

Learn in Your Spare Time

At home—in your spare time—you can get instruction by mail from the experts of Chicago Technical College. You can learn all the higher branches of your trade and soon know as much or even a good deal more than the man who is bossing you now. If you are a workman, you can train for a foreman's or superintendent's job or you can look ahead to being a contractor in business for yourself. This training doesn't cost much and you can pay on easy terms. Look into this now. Just send the coupon below and get catalogs and full information.

FREE

Send the Coupon.

Lesson in Plan Reading

Get this free lesson. See from it how plain every point is made and how easily you can grasp it. Not a cent to pay. This lesson is free—sent to show you how quickly you can advance by taking a Chicago "Tech" home study course in Building. All you need do to get it is to send the coupon.

Complete Builders' COURSE

Prepared and taught by experts. No useless theories. Just the practical things you want to know—told in simple, practical language Easy to understand—and you have the personal direction of the Chicago "Tech" experts who explain everything—make every lesson clear to you.

What We Teach

Plan Reading. How to read a building plan. How to read dimensions. Detail drawing. How to lay out work from plans. Tracings and blue prints—how they are made. Practice in reading complete plans from basement to roof, etc., etc.

Construction Brick Work. Footings and foundation walls of brick, concrete and stone. Brick laying complete. Brick and stone arches. Use of different kinds of stone. **Carpentry.** Kinds and uses of wood, cornices, interior details, etc., etc. Plans and specifications for all kinds of buildings.

Estimating. Practical rules. Problems worked out from the plans. Brickwork and carpentry. Re-inforced concrete. Estimates of labor and material for all classes of construction. Fire proofing, tile flooring, arches, partitions, furring, terra cotta, etc. Lumber and timber; figuring board feet. Estimating mill work. Lathing and plastering, sheet metal work, marble jointing and decorating, glazing, plumbing, heating, wiring, etc.

Arithmetic, Architectural Drafting, Plumbing, Heating and Ventilating all taught by practical men.

Get This Training By Mail

You get all this training by mail and you study in spare time. Not an hour taken from your work. Keep on earning while you are learning—then step into bigger pay as a building expert—get paid for what you know—not for what you do. You be the one to know the "hows" and "whys"—to tell others just what to do.

Send Coupon Now

This brings catalogs and complete information about the course which interests you. See how others have profited merely by study in their spare time—by preparing for the big jobs above them.

Mark X in coupon to show which course interests you.

30 Years of Unexcelled Service

—under the most exacting conditions—have proved the worth of Rainbow Sheet Packing wherever steam is used. It is the **original red sheet** packing and the "Rainbow" trademark is your assurance of dependability.

Rainbow Sheet Packing

is the one gasket material that may be depended upon to give faithful service and save many replacements.

Genuine Rainbow Sheet Packing is made in Canada.

We will gladly send you a catalogue and if you wish, one of our technical experts will help you select the right packing for your particular requirements.

Prevent Costly Stoppages

The mill that uses D. K. McLaren's Genuine Oak Tanned Leather Belting is free from breakdowns.

There is no loss of power from sagging belting, but a continuous supply of power, insuring maximum production at all times.

Our belting is made from carefully selected hides, tanned by our superior oak process.

Give D. K. McLaren's Belting a chance in your mill, and note the wonderful results.

Tudhope-Anderson Detachable Lumber Trucks

Unequalled stand-up-ability on tough, rough and soft road-beds are the tests that explain the widespread popularity of these sturdy trucks among lumbermen. Cut shows Front Hauling Gear No. 41 coupled to Hind Gear No. 42. One or more Hind Gears may be attached or detached with ease.

Look at the wide tire steel wheels. They mean easy hauling. We guarantee them. Spokes may be renewed in case of accident—not so with others. Axles are high quality square steel ensuring many years' service. Wood parts are best oak, air-seasoned and kiln-dried. All parts well ironed and braced.

Built to the following specifications:—

No. of Truck	Size of Steel Axle	Tire Inches	Wheels Inches	Frame Length	width
41 Front Gear	1¾" square	4 x ½	26	....	....
42 Hind Gear	1¾" square	4 x ½	42	5 feet	40 inches

50 Years' Experience
in making better Saws enables us to meet Today's Demand for Lower Prices.
Hundreds of woodworking plants have found that Huther Brother's Patent Dado Heads enable them to save vast amounts in the time ordinarily required for intricate grooving.
The saw consists of two outside cutters and enough inside cutters to perform the required cut. The outside cutters may be used separately or in combination.
The Huther Brother's Dado Head was developed after a thorough study of the needs for a saw of this kind, and as a result can be depended upon to perform creditably at all times
The experience of other woodworking plants can be made yours if you will write for complete catalogue of Huther Dado Heads, or order one on approval. It may be returned at our expense, if unsatisfactory.

HOLT
PEORIA-STOCKTON

The "CATERPILLAR" Logger

POWER is the problem of the logger from the time the tree is felled in the woods until the logs are delivered to the mill.

Power without traction is waste. "Caterpillar" Tractors do not waste power. The "Caterpillar" Logger not only keeps the mills running but reduces the log hauling cost.

Send for bulletin, "The Caterpillar Logger."

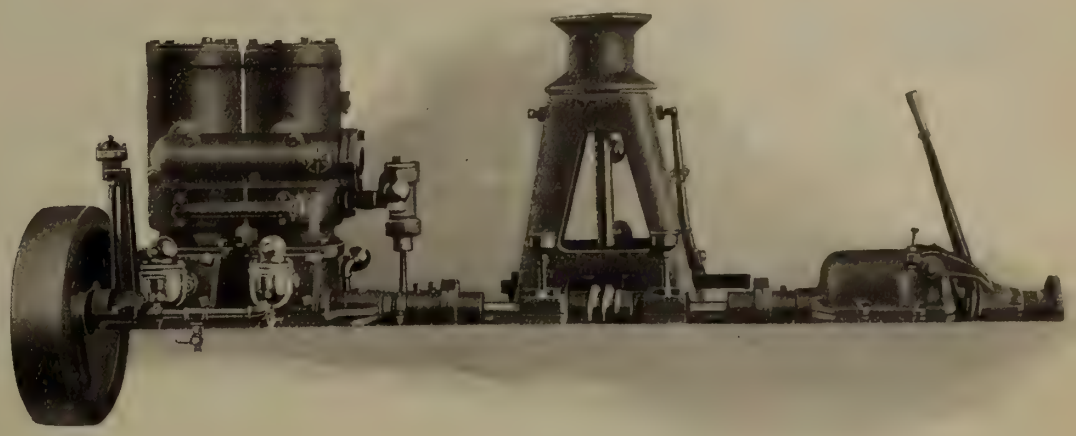
Adams Gasoline Alligator Pointers

Lumbermen find it quicker and easier to work with an Adams Pointer. It is a powerful and efficient gasoline boat that has given satisfaction to the lumber industry throughout the Dominion.

Adams Pointers are made by expert workmen at Penetang. They are easier and safer to use than alligators and tugs. They have a well built, easy running engine and a powerful reverse gear towing winch that render them equal to the heaviest work.

An Adams Pointer should be included in your equipment. Send for further particulars and blue prints, which will give you full details.



Adams Engine Co., Penetang, Ont.

J. T. PAYETTE, Proprietor

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ⅜ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

OTTAWA MONTREAL TORONTO WINNIPEG VANCOUVER NORTH BAY

Large stocks available for immediate shipment

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

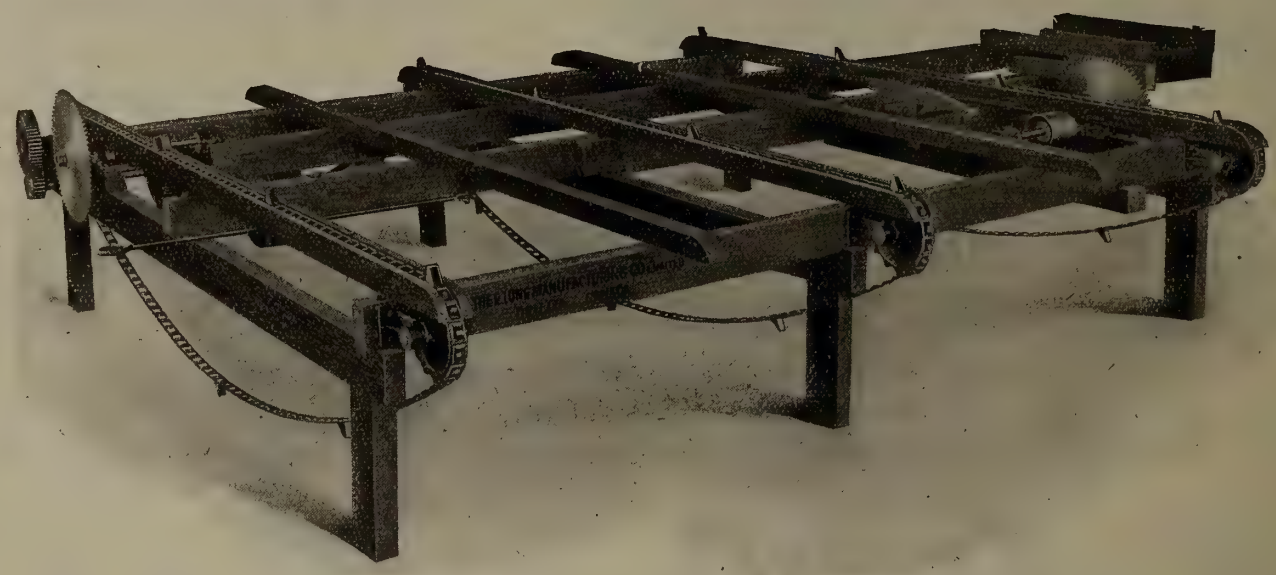
LUMBERMEN'S EQUIPMENT

For the Saw Mill

No. 2, Two Saw Right Hand Trimmer



This Right Hand Trimmer is the Standard for a left-hand saw mill. Substantially constructed throughout and will give lasting and efficient service at the least expense.

The standard machine will trim stock 5" thick, and from 6 to 18 feet long, but can be made to trim heavier, as well as longer material if required.

The Frame, Feed Works, Tail Sprockets, Saw Mandrells etc., are made of the highest grade material and ensure long, uninterrupted service.

Waterous

BRANTFORD, ONTARIO, CANADA

NEW CHAMPION EDGERS

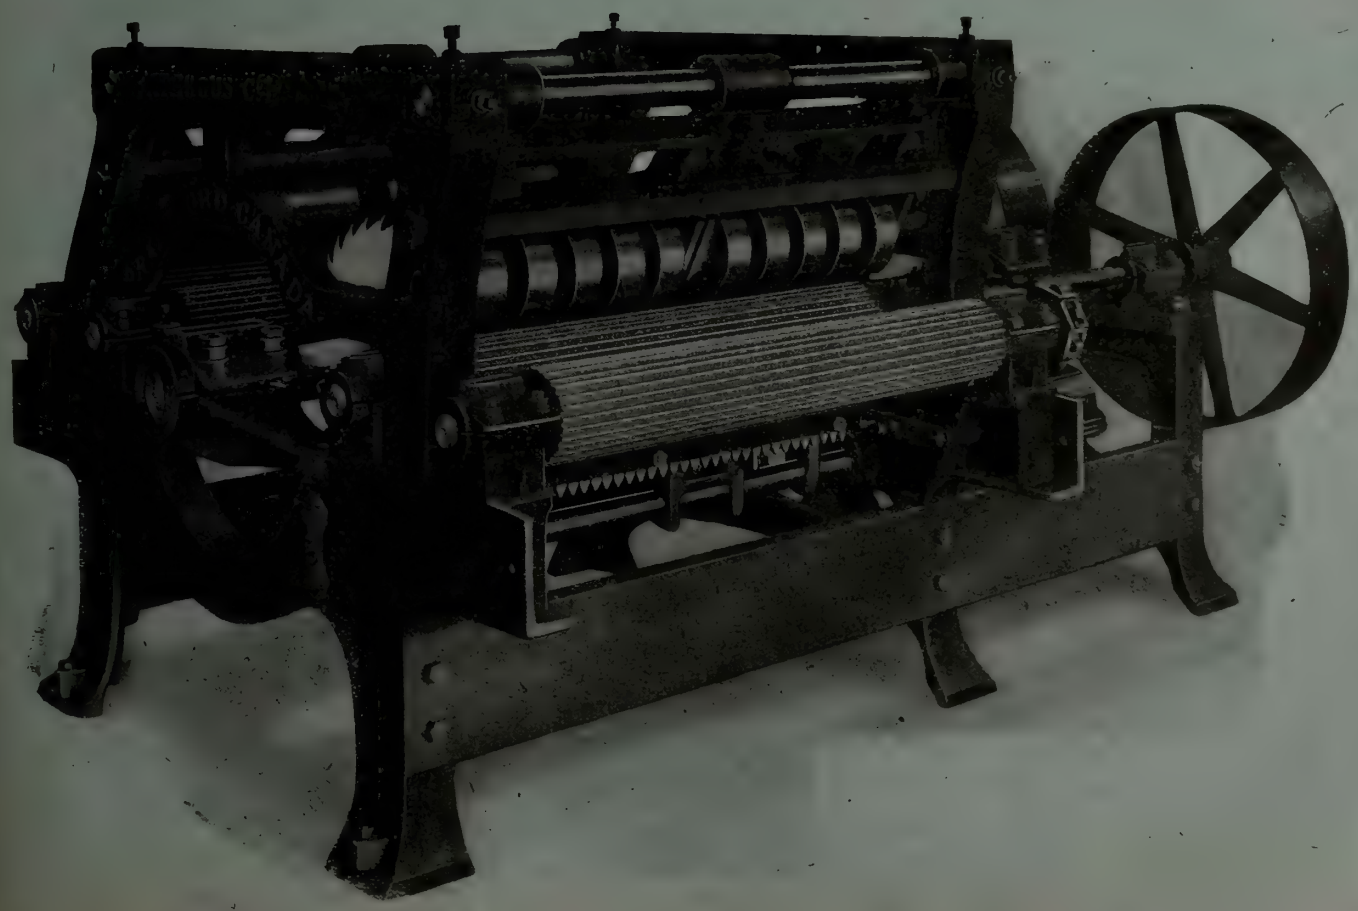
For Fast and Accurate Cutting

WATEROUS NEW CHAMPION EDGERS are built with 40″, 48″, 56″, 60″ and 72″ opening. They carry as many as four movable and two stationary saws without difficulty.

These edgers cut true and to dimension at all times. The guides are rigid and cannot shift in the cut. They are crowded to correct position and held immovably in place by a steel setting gauge that drops upon them. No other Edger has this feature.

An Edger for 6″ Cants.—You can put a 6″ cant through this edger and know it will come through edged to a hair. Edger carries 22″ saws, 6″ saw collars, leaving 7″ clear saw blade, more than enough margin for 6″ stock.

Mandrel is 3⅞″ in diameter, the three bearings that support it are each almost 10″ long—the rest of the machine is built in proportion. That's why Waterous New Champion Edgers can be crowded to the limit and will turn out full capacity, day after day, without falling down.



Notice the feed rolls, two before and two behind the saws. They are machine fluted to give a firm, secure grip on the timber that holds it fast, but will not mar it in any way.

The press rolls are divided, too, making both sides of the machine independent of each other. It's a worth while feature decidedly.

We manufacture up-to-date . machinery for Saw Mills of any capacity, either circular or band.

There are 75 years' experience behind every article turned out.

Pink's Lumbering Tools

The Standard Tools in every province of the Dominion, New Zealand, Australia, etc.
We manufacture all kinds of lumber tools. Light and Durable.

Long Distance Phone, No. 87

Send for Catalogue and Price List.

The Thomas Pink Company, Limited

Manufacturers of Lumber Tools

PEMBROKE - - - - - ONTARIO

MADE IN CANADA

It's a Pink anyway, you take it, and it's the best Peavey made.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams"

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.

West & Peachey - Simcoe, Ont.

Saw Mills Pulp and Paper Mills

The Wood-working Industry

The wisdom of keeping a record of the time of arrival and departure of employees, has been proven in many establishments.
The mill owner who trusts to the inaccurate, and old-fashioned time-keeper system, is paying out many dollars for which he gets absolutely no return.

Employees themselves, feel more content, when an International Time Recorder is installed in the plant. It prevents disputes, because it cannot make mistakes.

Stop paying for time that has not been devoted to your interest.

Write to-day for booklet.

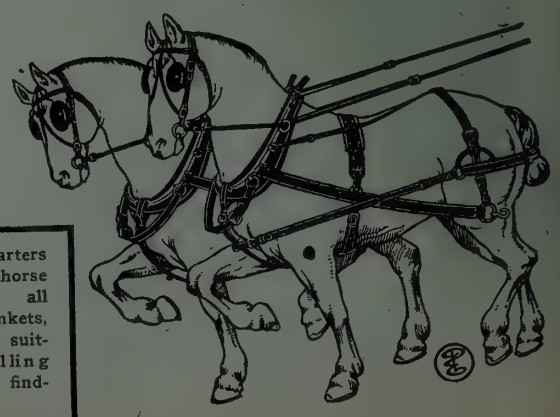
Lumbering is Strenuous

Michigan Lumber and Skidding Harness

Only the strong and the sturdy can stand up under the enormous and continuous strain necessary to take the tree from its native place and carry it along until it has completed its destiny in the shape of lumber. Lumbering demands strength in men—strength in machinery—strength in horses—strength in materials and strength in supplies. Strong horses equipped with strong harness, aiding strong men, are necessary in the lumber bush as an adjunct to the work of lumbering.



"Carson Quality" Michigan Lumber and Skidding Harness is at the top of the ranks. It is used by leading lumbering concerns throughout Canada. It has their unqualified endorsement. We know that if you try "Carson Quality" harness it will also have yours.

Measure the Hours You Purchase

If you sell a thousand feet of lumber you see that there is only one thousand feet as that is all you are paid for. The same applies when buying anything.

Are you getting a "full measure" of hours and minutes you buy from your employees?

There is no guesswork in buying potatoes—so why should you pay for a full day, when you are not getting sixty minutes to the hour?

Install the International Time Recorder—measure what you pay for.

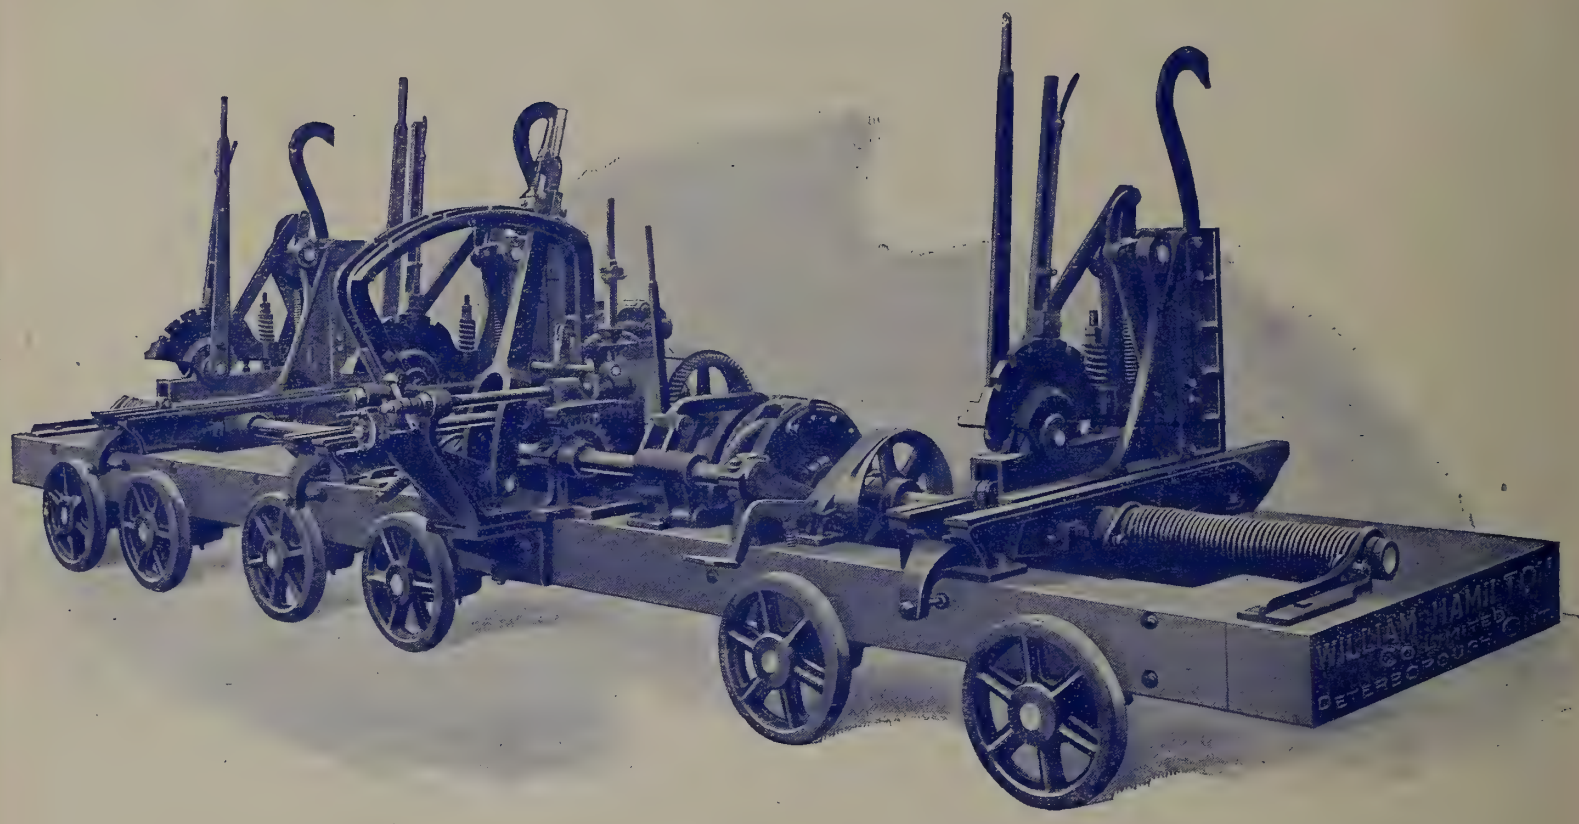
Review of the Canadian Lumber Trade in 1920

"HAMILTON" LOG CARRIAGES



Above cut shows one of our **No. 2 HEAD BLOCK CARRIAGES** with knee opening 40″ from saw line. Note the sturdy compact lines of this carriage, built for heavy but accurate service with weight properly distributed, and the dogs set low on the knees to insure gripping of the smallest logs.

We make these Carriages with pine or oak frames any length—having cast iron, or steel cast head blocks—with knee opening of 33″, 40″, and 54″, and equipped with any number of head blocks of any spacing required. Hand or Steam Set may be used, and carriages are designed for either steam or rope feed. They are built of the best materials obtainable for fast and accurate cutting, are equipped with **NEW DESIGN AXLE RECEDING WORKS** and have carriage wheels 14″, 16″ or 18″ diameter. We have installed hundreds of these carriages in Mills from Coast to Coast, and we guarantee them in material, workmanship, and design to equal any on the market to-day, and to give thorough satisfaction wherever used.

OUR CARRIAGE CATALOGUE IS YOURS UPON REQUEST

Consult us for any of your saw mill needs, and you will have a Plant looking after your interests **that has been in the Sawmill Machinery game for over sixty-five years.**

The Builder--

This is the man you are striving to interest and the only sure method is to offer him lumber of quality at a price that will allow him to buy. He is a mighty good judge of what he is buying and a shrewd purchaser at all times. But if you can please him you have made a customer worth while.

We deal in just the kind of lumber that he wants so why not get in touch with us?

Optimism—

Cannot always be termed a virtue. It is, however, a necessary adjunct to sane business vision in Canada.

WE need OPTIMISM in the lumber business but not ultra-optimism at the present time.

British Columbia's timber wealth is a noble heritage. He who exploits its commercial values is not an optimist.

There is no need for optimism —the fact is legion.

Our Faith in its market demand is established and is well founded.

850 Hastings St. W. VANCOUVER, B. C.

Part of the large stock of spruce sawn by Gloucester Lumber & Trading Co., at Bathurst, N. B. The picture shows the excellent dock and water shipping facilities on the Nepisiguit River.

"From the Heart of the Maritimes"

SOME of the finest timber limits in this great section of the country are controlled by us. The quality of the lumber we produce is therefore unusually high.

Shipping facilities are splendid. From Bathurst, vessels drawing up to twenty feet may be loaded safely and quickly. The photograph above shows a portion of the dock which has a piling capacity of 5,000,000 ft. Shipments are also made by rail.

The products we specialize in are Spruce, Pine and Hardwood Lumber, Lath, Shingles, Railway Ties and Pulpwood.

Orders are filled carefully and promptly.

Every Retail Lumber Merchant Should Read This

Because it is impossible for every one of our customers and prospective customers to personally visit us at our plant, we are taking this opportunity of telling something about ourselves and what we are able to offer. If there is any information not given here that you require we shall deem it a pleasure if you will get in touch with us.

OUR LOCATION Our planing mills, hardwood flooring mills, sash and door factory and general wood-working mill are located at Bromptonville, Que., on the Grand Trunk Railway, Montreal—Portland division.

We are six miles from Sherbrooke and four railroads serving all points East and West.

As you will see our shipping facilities are of the best and we always have ample cars for prompt shipment.

OUR RESOURCES Through our president, who owns personally and controls several large sawmills in Eastern Canada, we have a source of supply equal to none. We can always cater to the largest orders offered without depleting our local stocks too badly.

Our organization is unique since we have our modern planing mill here to manufacture the lumber supplied by these mills.

For the general retail yard trade, we are the only firm able to supply these yards with all the lines which they carry and in MIXED CARLOADS. When you consider that we manufacture sashes, doors, mouldings, clapboards, hardwood flooring, shingles, dressed and rough lumber, in fact everything made of wood, and we can ship cars mixed with these varieties, the retailer will soon wake up to this opportunity.

With our shipping facilities, think of the great advantage it is for a retailer to order his stock just as he wants it.

For the local market, the advantages are still better since we make deliveries by motor trucks and teams.

Very truly yours,

Brompton Lumber and Mfg. Company

Gasoline Loaders and Skidders

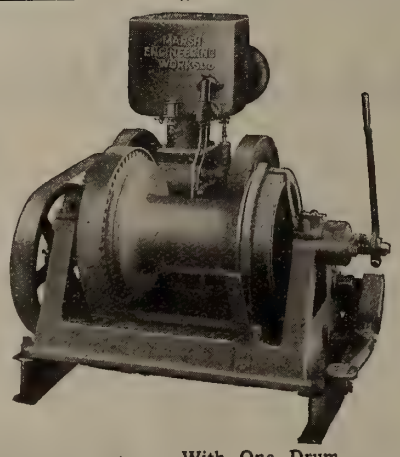
Will move your logs much more quickly and at a lower cost than man power. They have been thoroughly tested in Ontario lumber camps, and have won the enthusiastic endorsement of their users.

They are light enough to be moved easily about on the job, yet are built strong enough to be safely used for a considerable overload if necessary.

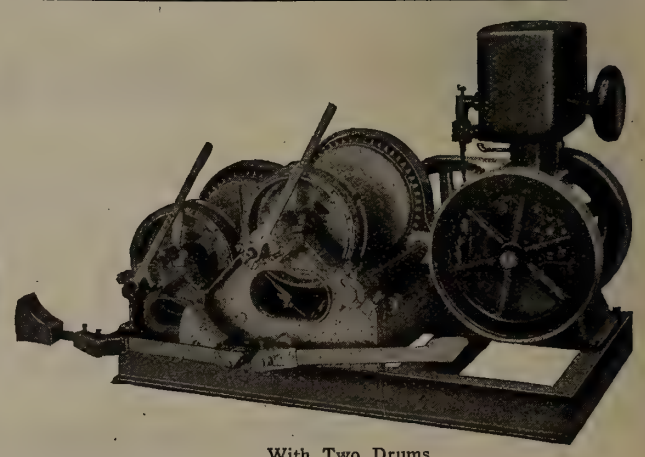
They are simple in construction, and can be operated by any fairly intelligent workman.

They have been tested in the coldest weather, and run all winter every day in Ontario logging camps, even at 20° below zero.

We are now making these machines in two sizes—Six Horse Power, and Ten Horse Power. The Six Horse Power size will move readily any log commonly found in Ontario and East. The Ten Horse Power size will handle two or three logs bunched together, involving a considerable saving of time at a small extra outlay for machinery.



With One Drum



With Two Drums

Gear Driven direct from the Gasoline Engine, and with Motor rigidly mounted on same bed as Hoist.

Marsh Engineering Works, Limited *Established 1846* **Belleville, Ontario**

GOODHUE BELTING For Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power

For the wet places in the mill we have a special waterproof leather belt—"Acme." Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

ORILLIA - ONTARIO

Investigate the Possibilities of Ontario

"THE Banner Province of Canada" as Ontario has been aptly termed, well merits the investigation of those connected with the lumber industry.

In this province are established more than nine hundred woodworking factories, some eight hundred saw mills of all capacities and eleven large pulp and paper plants. Transportation facilities are excellent. Three transcontinental railways with many branch feeders, traverse and timbered areas, while thousands of miles of island waterways provide cheap and easy means of transportation.

Of great importance is the development of the water power of the Province being vigorously pushed by the Hydro Electric Power Commission of Ontario. "Power at Cost" is their slogan.

The outstanding commercial trees include white pine, red pine, hemlock, maple, beech, elm, basswood, spruce and poplar, with white pine holding the premier position.

The approximate value of these woods amounts to $40,500,000 annually.

This amount can easily be doubled!

Felling sturdy white pine in Northern Ontario

If you want to share in this wonderfully rich field get in touch with us. Complete information glady furnished.

ELEVATION WITH FRONT REMOVED

Contractors for **Boiler Settings and Power Plant Brick Work**

We design and construct every description of Furnace Linings, Door Arches and Jambs, and Tongued and Grooved Dutch Oven Blocks. For Furnace Arches of all kinds we supply radial blocks in six different sizes. They make an arch 9 inches thick, and as they are in lengths of 12 and 16 inches, any desired length can be obtained.

Our linings are highly refractory, strongly immune of the destructive influences of sudden thermal changes, and will withstand much compression under high temperatures—three most important qualities.

The Fire Box Blocks are tongued and grooved, and are made in sizes 16 and 18 inches high, and 4½, 8, and 9 inches thick.

All work is under the supervision of Mr. John W. Gates, who has had 35 years 'experience in the designing and installation of Boiler Settings.

Don't Be Fooled About Fire Insurance!

¶ Fire Insurance is one of the most important things you buy, but that is no reason you should pay double price for it.

¶ For the past twelve years we have written fire insurance on most of the large Canadian Saw Mill Plants without an argument at the time of loss adjustment, and we have saved these Lumbermen thousands of dollars in their insurance cost.

¶ We make our own rates, we are licensed in Canada, and we give you a service that will hold your business as long as you have insurance to place.

¶ We confine our business to lumber yards and woodworking plants, where the physical hazard and financial standing will meet with our rules of eligibility.

¶ Perhaps we can only write a part of your insurance, depends upon the size of the plant, but it costs you nothing to take the matter up with us and it may be a big saving in insurance cost to you.

Address all communications to:—Lee Blakemore Inc., 942 McCormick Bldg., Chicago, Ill.

Where Disston Quality Is Born

There is something more than a proper mixture of metal put into the crucible when Disston steel is made.

It is an unseen, intangible ingredient—yet as big and real as the tremendous plant in which Disston Saws and Tools are made. The long experience of men whose fathers were Disston steel workers, whose grandfathers worked out the secrets of fine Disston steel generations ago—this is what has made the present quality of Disston steel.

Under the greatest test of all, hard service over a long period of years, the quality born in Disston steel is revealed. The greatest praise of Disston Saws and Tools comes from men who have used them longest, men who write of these tools with a friendliness, and even affection, seldom given to inanimate objects—and there could be no higher tribute.

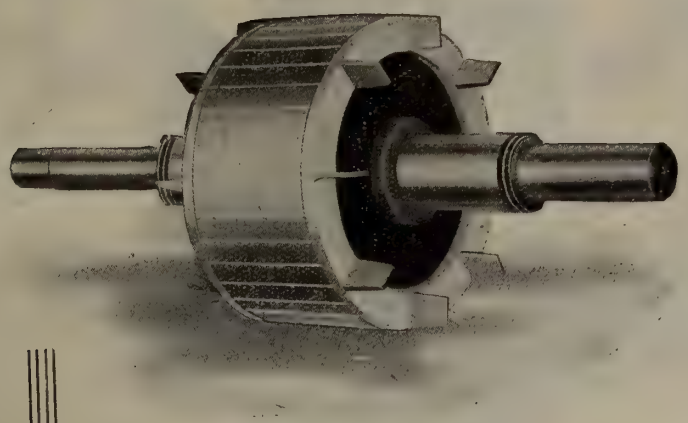
DISSTON

SAWS TOOLS FILES



No Soldered Joints or Bolted Connections in

Canadian Crocker - Wheeler Rotors

The greatest improvement in modern induction motor design—no soldered joints to melt and cause arcing or open circuits and no bolted connections to work loose. The risk of fire as well as the possibility of motor troubles and consequent delay, is thus greatly reduced if not eliminated entirely.

¶ The entire Rotor Winding of small squirrel-cage induction motors is cast of aluminum alloy— in one operation. Thus, the complete winding is one integral structure.

¶ The medium and large size Rotors have liberal section copper bars and the end rings are cast-welded, making perfect contact.

The generous bearing sizes and sturdiness of mechanical construction throughout, further emphasizes the superiority of our motors for woodworking plants.

PACKARD

100,000 Miles—Still in Active Duty

The constant heavy duty that is demanded of a truck in lumberyard service brings out the notable strength and sureness and operating economy of a Packard Truck.

The ability of a Packard to stand up under heavy duty is a direct result of the tested design, selected materials and expert workmanship that enter into Packard manufacture, and of the method by which every Packard Truck is specified to its particular work.

An example of Packard ability and stamina is furnished in the transportation records of the E. K. Wood Lumber Co., San Pedro, Cal. In 278 days their Packard covered 19,807 miles, and it hauled 6,013 tons; altogether it has covered more than 100,000 miles and is still a valued member of their truck fleet.

Every Packard Truck benefits by the countrywide service facilities established to keep the Packard Truck at the highest level of efficiency.

Vol. 41 — Toronto, March 15th, 1921 — No. 6

Confidence, Stability, Optimism and Vision During 1921

The annual Statistical Number of the "Canada Lumberman" has been issued for many years and has always been a welcome and instructive volume. It has been a kind of barometer of trade conditions—an index of the activity of the industry in various parts of the Dominion, particularly the east. The statistics, which are presented, are, of course, not from official sources, and in their compilation, the publishers have to depend upon the goodwill and co-operation of the exponents of the wood products enterprises. This has, in the great majority of cases, been freely given, and the responses to most of the queries presented in a clear and cheerful manner.

Every effort has been made to secure from mills in certain sections the amount of lumber cut during the past season, as compared with that of a year ago. The returns show that the winter of 1919-20 was one of the busiest ever known in the history of the lumber business. Last year loomed up most attractively and it was generally felt that there might be a shortage of stock, while the outlook for overseas consumption and trade with the United States was particularly bright.

There was no cloud on the horizon for the first six months except that an unreal and fictitious atmosphere seemed to permeate every branch of the industry. In many cases prices ran riot; profits were exorbitant. Those who had stocks of forest products on hand, soon disposed of them and went out in search of other stocks, with the result that quotations reached the highest figure ever known in the sphere of lumbering operations. Then a change came over the face of the landscape. Caution and conservatism superceded frenzy and turbulence, and for a while there was serene sailing. Gradually demand eased off almost to the vanishing point, and the closing two months were possibly the dullest and most unsatisfactory in the long history of Canadian lumbering activities.

However, taking the long-range view and averaging up prosperity, tranquility and adversity, 1920 was in its entirety the best year that the trade ever enjoyed. The market, at the close, seemed more sharply defined and outlined in its quietness by reason of the unwonted stir and hum that had characterized proceedings in the spring months. All these points are emphasized in special articles from the different provinces which appear in other parts of the Statistical Number and need no rehearsing.

The output for the coming year will be very much decreased, and in some sections in the east the cut will not be more than 40 or 50 per cent. of what it was a year ago. It is impossible to give accurate data for each district, as much of the past season's logging in different localities depended upon the faith, enterprise and calibre of the man engaged in the business. There are varying types of humanity, all of whom display diverse characteristics in a time of depression or readjustment. Under the stress and excitement of expansion and profit, everybody is more or less like-minded, but when the tide flows the other way, then new phases of human nature are revealed.

On the whole, however, it may be stated that, while no one looks for a boom year in the lumber business, there is a quiet, persistent feeling which expresses itself in thought and act—not idle talk—that, on the whole, the closing months of 1921 will witness a considerable revival in activity and demand, and that everything is tending toward stabilization in values and equalization in production and consumption.

The views of representative lumber men in various quarters, which are presented elsewhere in this issue, will be read with timely interest and instruction, and it will be observed that there are few, if any, pessimists in the lumbering arena to-day. The attitude of the leaders in the lumber trade, the men who guide opinion, and shape operations, during any stormy period, is well summed up in the words of a leading financial authority, who says, "Sentiment is contagious. Talk panic and you foster panic; talk optimism and you inspire optimism. Keep your head and you stand a good chance of keeping your business; lose your head and you are in danger of losing your business. The beginning of 1920 saw us soaring farther and farther away from economic sanity. 1921 sees us moving steadily nearer and nearer economic sanity. The wise business man and manufacturer looks not only to the conditions of the moment, but tries to foresee those of the morrow. Strong men pull ahead in times like these.

"The short-sighted are the most pessimistic to-day, the far-sighted the most optimistic. The business man, be he manufacturer, wholesaler or retailer, who faces the coming year with characteristic courage, faith and vision, with a cool head, a clear eye, a stout heart, erect shoulders and a firm step, will be the one who is going to do more to rehabilitate conditions and to impart permanency and strength to sound operation and management than any other force or factor in the unsettled commercial world."

One Hundred Terse Opinions of the Trade Outlook and Log Output

Leading Operators Express Their Views to the Editor of the "Canada Lumberman."

VANCOUVER, B. C.

The outlook for trade in 1921 is fundamentally sound and should start to move in April. Logging operations have not been very brisk during the past winter. The camps are now all closed out. There is little or no market at present although actual requirements are abnormal. Buyers are evidentaly waiting for someone to start the ball rolling. They are fearful to place big orders, thinking prices may further recede. Confidence is gradually spreading, however, and purchasers are curtailing extensively. The outlook is bright and basic conditions firm.

Another Vancouver firm says: Regarding the prospects of the lumber industry for the coming year, it is rather a difficult matter, to predict just what market there will be, as at the present time practically no business is being placed, and what little is being received is at prices very much under production cost.

NEW WESTMINSTER, B. C.

The first six months of 1921 will witness a weak market and the second six months good. The log output will be the same.

FORT MOODY, B. C.

The year opened with a demand, prices at feverish levels. This activity had spent itself by April, and since then it has been a struggle to liquidate stocks on a declining market. We believe prices are now on a reasonably stable basis for spring business. We sawed about 2,000,000 feet more during 1920 than the year previous, and we found the volume of trade greater and also profits. The first six months of the year were extraordinarily active and the last six months slow.

GENOA BAY, B. C.

Trade is quiet at the present time and is likely to continue so for six months. Then it will, no doubt, be very good. The export demand during 1920 was good.

BAYNES LAKE, B. C

As far as the prospects of 1921 are concerned, we would characterize them as unfavorable, and the cut here will be less than half of what it was a year ago. Higher costs and excessive freight rates will prevent any further reductions in price. Present prices only profitable on a further reduction in costs.

PRINCE RUPERT, B. C.

So far as United States markets were concerned, there was a strong demand for upper grades, but in the overseas business, the high rates of exchange curtailed sales. We look for a steady improvement with a tendency to conservative prices for 1921. The early part of 1920 was characterized by very high prices with a rapid slump when credits were constricted. Present prices are below the cost of production with but a minimum of sales. Inquiries would indicate an increasing demand for spruce with a tendency to stiffening of prices, due to the fact that most plants are closed and stocks are low at mills. Inquiries are largely for specials and uppers, principally rough kiln dried clears. Little movement in manufactured (that is finished) stocks.

ENDERBY, B. C.

We are feeling encouraged over the prospects, which looked pretty blue for awhile, as enquiries are coming in rather briskly, and furthermore they seem to be good live ones. The question of price is rather hard to foretell. We must have the demand before we can expect the prices to go up. However, we will say, that we notice that there is not so much cutting of the prevailing prices now as there was a little while back. All of the mills in this district, as far as our knowledge goes, are contemplating running this year with practically no anticipated reduction of output. The majority of the mills hereabouts do their own logging so it is not such a simple matter for them to shut down as it is for the Coast mills.

THE PAS, MAN.

There was a good demand and good prices for all lumber shipped to the United States during the last year. Lath were fairly strong. Our log output this winter will be about 30% ahead of what it was a year ago, and so far as 1921 prospects are concerned, would say that we are looking for a good steady call.

WINNIPEG, MAN.

The prairie yards have held off, and have adopted a policy of watchful waiting this year, as against previous years, in which they discounted their requirements and ordered their spring stocks in November and December. In our opinion a considerable business will develop in the wheat growing areas of the Western prairies, but in the Northern districts, where oats are the principal product, consequent upon the very small return, (which in many cases did not pay for the threshing and harvesting), it is natural to expect a very restricted demand. There is evidence of a considerable building program in cities, particularly Winnipeg, where the shortage of houses is practically as acute as ever.

KEEWATIN, ONT.

The log output will be about 20% more but the trend of trade at the time of writing is not too encouraging. Prices at present are very weak with no demand. Log costs will be, at least, equal to those of a year ago. Profits were slightly better during 1920 but the volume of trade with us was fully 15% less. Our stock is about half a million more than it was twelve months ago.

FORT WILLIAM, ONT.

It is a conundrum what the trade is going to be in 1921. We know there are dwellings required in both Fort William and Port Arthur but cannot encourage people in building. We consider the inefficiency of labor the main cause for little or no building, and next in order comes the cost of plumbing, heating and hardware.

THESSALON, ONT.

We look for a good spring trade. Log output about the same.

SOUTH RIVER, ONT.

Our output will double last year's, so far as logs are concerned. The prospects are bright with reduced prices. We have not yet sold our 1920 cut.

CUTLER, ONT.

The cut here will be considerably less than last winter. Trade outlook is not encouraging just at present.

BISCOTASING, ONT.

We are not operating this winter as we had a large number of logs held up last year which we will saw this spring. These logs were stuck on the drive. We believe that lumber will advance in the spring.

TIMMINS, ONT.

Our operation this year is not as large as the year previous, principally accounted for by the high wages and the high price of food stuff. The efficiency of the men increased during the past month but in the early part of the season it was very hard to get any competent labor. During the season of 1920 we took out slightly more than a million railway ties and we expect this year to take out about five hundred thousand. We are also taking out considerable saw logs. At present the snow is not too deep and lumber operations can be carried on very successfully.

EAGLE LAKE, ONT.

The log output will be 25% less than last winter. The trade outlook is good.

MADAWASKA, ONT.

Trade outlook for 1921 none too good. Log output 40% less than a year ago. So far as prices are concerned, we do not think these will be much lower than they are at the present time.

MAGANATAWAN, ONT.

The log output here will be double; trade outlook for 1921 not good.

FOLEYET, ONT.

Our log output will be increased 200% of what it was a year ago, and in our opinion the trade for 1921 will be fair. Our mill will cut 12,000,000 feet this year, of which 7,500,000 feet will be sawn ties, the balance being for our northern construction requirements. We are also taking out 250,000 axe-made ties this season.

HAILEYBURY, ONT.

The cut around here will be about the same as it was a year ago. The trade outlook is fair.

BYNG INLET, ONT.

Our log cut will be about the same this winter as compared with last. The trade outlook for 1921 is rather unsettled and so far as price changes are concerned, it would be a wise man who could answer the interrogation with any degree of accuracy. We are hopeful for spring, however. Meanwhile it is a good time to "turn off the gas and dig."

BALA, ONT.

The log cut here will be less than half of that of 1920. So for as the trade outlook for 1921 is concerned, only a prophet can tell.

CACHE BAY, ONT.

The log output in this district will be slightly less than last year, and we look for a good demand for lumber in the spring.

JACKSONBORO, ONT.

The log cut here will be one-third less than what it was last winter. Uncertain is the trade outlook but we expect a general improvement as the year progresses. There was a heavy demand for lumber of all kinds last spring and a decided falling off later in the year. Profits and prices were better than a year ago although the volume of trade was less.

FIELD, ONT.

We are optimistic regarding conditions for 1921. The log harvest in this section will only be about 50% of what it was last year. Prices were considerably better in 1920 than in 1919, and profits compared very favorably. The lath market was quiet during the year.

PAKESLEY, ONT.

The log output here is 20% less than a year ago. Trade prospects are fair.

WEST RIVER, ONT.

Our log output will be about the same as in 1919. Profits were a little better in 1920 than in the year previous and prices showed an average advance of 30%. Stocks are much lower. Lath was in good demand the first six months but then became slower. As to 1921, we look for a good year on the whole. Trade will likely be quiet for the first few months and after that there will be a good demand and present prices should be well maintained.

EXETER, ONT.

Woods operations less active than last winter. It is too in 1921. Consumers are waiting for a reduction in prices of pine.

BRACEBRIDGE, ONT.

The log output here this winter will be from 10% to 20% less than last year. The prospects, which did not look very good in January and February, are now much brighter. So far as prices at the present time are concerned, we will say that they are low enough; in fact some lines below their value, but these will adjust themselves as time goes on. Some stocks are selling for less than they can be replaced at, and the cost of operating is not reduced correspondingly with lumber values. Wages are still high as are also certain supplies. Our observations refer more particularly to hemlock than any other wood.

HUNTSVILLE, ONT.

Cutting hereabouts will be about the same as last winter although some predict the falling off will be 20% to 40%. The outlook is very good and each month shows an indication of improvement. So far we have not been able to pick up much definite information, enquiries are coming to hand a little better although sales are very few. We feel, if there are no labor troubles, that the middle of the season should see a distinct revival in business. Lath were in good demand during the early part of the season, and prices were high but fell away in October.

NORTH BAY, ONT.

We expect to get out about the same cut as in 1920. So far as 1920 prices were concerned, hardwoods were about $25.00 higher per M than the previous year and pine $18.00 per M higher. Stocks are 20% larger than a year ago. Trade may be a little slow early in the present season, but we expect that prices will hold firmly. We look for an active business after the building season opens, unless labor troubles should interfere.

NESTERVILLE, ONT.

Cutting about the same as last winter. Labor conditions were much improved over those of 1919 and the wage scale lower.

LATCHFORD, ONT.

The log cut here will be the same as last year. Trade outlook is fair.

MONTEITH, ONT.

The log output here is 25% less than last year. In our opinion the trade outlook is good if prices remain steady. We expect that they will be more or less steady for some months.

MARKSVILLE, ONT.

We think there will be a small reduction in price and a shortage of lumber stock during 1921. Our log operations will not be half as large as they were twelve months ago. Our mill costs for 1920 were the highest we ever experienced and will be less for 1921. Our cut of hardwoods during the past season was only about half of what it was last year.

KEARNEY, ONT.

We expect to have the same output of logs as last year with a little more hardwood. We think that the trade will be alright in 1921. We expect to have to take less for our lum-

ber but we cannot stand too much of a cut as wages and supplies have been very high. Things are a little easier at present and men are more plentiful, although good lumberjacks are still very scarce.

PARRY SOUND, ONT.

The cut will be approximately the same as a year ago, and trade should revive very much by June. Lumber is being shipped out of our yard more rapidly than anticipated, and it looks as though by the opening of navigation the docks will be almost as empty as a year ago when no stocks were left.

Another manufacturer, in reviewing the situation, adds: "We believe that prices will be 10% to 15% lower, but on the other hand, labor will be a little cheaper especially as compared with production."

JARLSBERG, ONT.

We think there will be only a moderate demand for lumber during 1921. Our stock is twice as large as it was a year ago, and our cut in the bush this winter will only be about two-thirds of what it was last winter.

OWEN SOUND, ONT.

The log output will be about the same here as last year. There was a good demand early in 1920 from the United States, which dropped off later. We expect that trade will be quiet for some time, with prices ruling somewhat under last year but with less decline than is generally expected.

POWASSAN, ONT.

We think after June that prices will be good. The log crop here will be 2,000,000 feet less than it was last winter. We are not calling upon the trade at present, and have reduced hemlock and spruce about $10.00 per M.

PENETANGUISHENE, ONT.

Opinions here differ very widely regarding lumber production and prospects. One firm says, "The log output will be only about 60% of what it was the year before, and there is nothing of much account shaping up for the first few months in market condition although it will probably be fair the balance of the year.

Another producer writes: "Our log output will be increased by 10% over what it was a year ago. We look for a little spurt in the spring with a falling off towards the fall. Our cut will be about 10,000,000 feet this year."

Here is another opinion: "The log output will be only half of what it was last year and trade will be down 25% to 30% during 1921. There is likely to be less stock of all kinds taken out. On account of the scarcity of snow and the weather being so mild, many lumbermen have again raised wages to rush out their stocks, as very little has been done owing to the soft weather and the want of frost to freeze up the marshes and lakes.

MIDLAND, ONT.

Trade outlook fair. Log cut about the same as last year although some say that it will be from 35% to 40% less, while another firm estimates the drop at 15%. The volume of trade was greater by 12% than that of 1919. Profits were slightly higher and prices about 10% above the average. Stocks to-day are also about 25% higher than usual.

MARMORA, ONT.

Owing to low water for last year's drive and also on account of the very troublesome labor shortage, our logs were much later than usual in arriving at the mill. Low water also forced us to close down the mill about the middle of September. As a consequence we did not get half our logs sawn and are carrying them over till this season. We are putting in no camps of our own this winter but jobbers will get out about half a million feet for us. The log output in this area will only be about half of what it was a year ago. The trade prospect for 1921 is very poor so far, but we are hopeful for better conditions and are not able to make any predictions.

MARLBANK, ONT,

Prices quoted by buyers were not encouraging owing to ocean rates and exchange. The log output will be about 10% higher if the weather permits. There is a gradual growth of business with prices stiffening and a fair demand for average-priced lumber. High-priced lumber will, doubtless, move off slowly but may fall in line as the demand increases in the late spring or early summer and consequently large stocks of this nature will not have the desired effect. The lumber trade cannot stand alone. Other lines of business must be in harmony. We have gone from the bottom to the top and we believe we have now reached the bottom again, so that in the face of our productiveness and source of supply the people of Canada should long enjoy a period of gradual prosperity, seeing that we are all older and wiser than we were in August 1914.

SARNIA, ONT.

The log output around here will be less this winter. The trade prospects are fair.

CHATHAM, ONT.

Can not say yet how the log output will compare with a year ago, but it will probably be less. We think that the trade outlook for 1921 will be allright. We find the demand for our manufactured lines of woodwork opening up very well. Prices will be a little lower this year if wages are lower in the mills. Lumbering in the woods costs about the same.

UTTERSON, ONT.

Cut here will only be about half of what it was a year ago. The market is dull at present but everything should be much brighter next summer.

WIARTON, ONT.

Wood operations will be about 20% less than a year ago. We look for an improvement in business in the spring. Prices for 1920 were considerably better than those of 1919, but the cost of operations was higher. The prospects for 1921 are a mystery just now. Enquiries have been coming in freely of late. Stocks generally are light and manufacturers holding firm. The expense of production is still high.

PEMBROKE, ONT.

We look for lower prices in 1921. The log output here will be about the same as last winter. Both profits and prices were larger than a year ago and stocks are 10% over those of 1919.

LINDSAY, ONT.

We believe a fair amount of business will be done in 1921. The prospect on the whole is good. We believe that the log output will only be from 60% to 75% of what it was a year ago.

HOLLAND CENTRE, ONT.

The log output will be pretty good here if selling holds out. Stock on hand is about 10% more than a year ago. Profits and prices were both considerably better in 1920 than in 1919. It is impossible for us to say what the trade will be for 1921. We are not receiving many inquiries for hardwood lumber of any description. We had a couple from overseas a few days ago, stating that prices for hardwood lumber would have to come down before they could place any orders.

SNOW ROAD, ONT.

The log output this winter as compared with last winter will be smaller, and the business barometer is very uncertain. The demand from the United States was rather dull with falling prices. Generally there was a good market locally until about November 1st. Stocks are about the same as those of a year ago. The volume of trade in 1920 was larger than that of 1919.

BARRY'S BAY, ONT.

The cut in the bush this winter will be less than last. A fair outlook for 1921.

CAMPBELLVILLE, ONT.

The cut in this district will be about the same. Our orders are pretty well all placed at prices that will compare favorably with last season. The demand, however, is small. We have been held up in our operations on account of no snow for hauling, and trucking adds considerably to the cost. We look for a better demand in spring and summer. The log output will be about the same as last winter.

PETERBORO, ONT.

This winter compared with last the log cut will be somewhat less. We expect local trade in the lumber line to be a little better, although things are yet very indefinite. Stocks are larger than they were a year ago. Prices during 1920 were about 20% higher than they were twelve months previous. Conditions prevailing in the shingle and lath market were poor.

MONTREAL, QUE.

We look for a fairly active trade in 1921 but with no advance in prices. Our log output will be greater this winter than last. Our stock is a little heavier. Trade was good till the middle of the year, then became almost dead. The same observation applies to overseas business in forest products.

Another Montreal firm say, "Our log output will be 40% less than what it was a year ago. The volume of trade was greater, profits less, prices higher and stocks 10% more than a year ago."

MORIN HEIGHTS, QUE.

The cost of production was so high in 1920 that it offset any benefit we might have had from the high prices obtained for the first few months of last summer. Our log output this winter will be a little larger than a year ago. We are expecting a good summer for local trade.

SHAWINIGAN FALLS, QUE.

We have about 1,000,000 feet more of lumber on hand unsold than a year ago, and our increase in cut during 1920 was about a million and a quarter over that of 1919. The log output during the present winter will be a little less than it was a year ago. So far as trade prospects are concerned, they seem a little uncertain but they should be fair. We believe that conditions will improve during the spring months, and look forward to doing a considerable volume of business at reasonable prices during 1921. During the past year there was a big demand in the first half, with a falling off to little or no demand during the closing months.

SHERBROOKE, QUE.

We are not operating in the logging line during the present winter, and cannot afford to sell at present prices, but believe that we will be able to dispose of the balance of our stock at a profit during the coming year. The trade outlook is fair. So far as United States business was concerned, in 1920 there was good trade but it was slightly handicapped by car shortage. Prices in 1920 were from $5.00 to $10.00 higher on lumber and $8.00 to $10.00 higher on lath than in 1919. Stocks on hand are about 20% over last year. We cut nearly twice as much lumber during 1920 as during the previous year.

Another firm say, "We are getting out a very small cut during this winter. Prices during 1920 showed an average of about $10.00 per M over those of the previous year. Our shipments to the United States mostly were of poor grade, and as for the overseas end, there was nothing doing. Now with respect to 1921 prices, the outlook is good. Prices are down and speculators are out of the market. Locally there has been about $10. drop in the price of softwoods. Hardwoods are very poor. We look for a fairly quiet year on big contracts, but the prospects for residential building, etc., are good. The volume of transit dressing shipments to the United States is light and shows no signs of picking up.

FASSETT, QUE.

The log output hereabouts will be less by about 4,000,000 feet than a year ago. As to trade outlook, please tell us—we would like to know.

NEW RICHMOND, QUE.

The cut here in the woods will only be about 50% of what it was in 1919-20. The business outlook is not very bright. There was a great shortage of cars during the year which somewhat hampered shipments.

ST. CASIMIR, QUE.

Up to the first of January 1921, costs in lumbering operations in the woods were 25% higher than last year. Many manufacturers have closed their doors and we think the output will be only a little over half of last season. The log crop itself will only be about one-third of what it was in 1919-20. Trade may be good during 1921 but it is impossible to say. On the whole, prices in 1920 were about $10.00 over those of 1919. We manufacture spruce exclusively and the volume of business in 1920 was about the same as the previous year.

AMOS, QUE.

Our log production will be about the same as last winter with costs 20% higher. The trade outlook does not appear very bright at present.

CHANDLER, QUE.

The output will be about the same, so far as logging is concerned. As to the trade outlook in 1921, we look for a decrease of 25% in prices and stock.

JOLIETTE, QUE.

We are not making any logs this year. Trade is not encouraging at the present time.

PORT DANIEL, QUE.

We consider that trade will pick up as spring approaches, and we will have a fair demand. The cost of producing lumber this season will be as high as last, and any reduction in price will have to be taken from the profits or we must sell below cost. The log output here will be about 75% of what it was a year ago. There should be a fair demand for lumber during 1921.

MATANE, QUE.

Profits and prices were better in 1920 than the year before and stocks are heavier than a year ago. Our log output will only be about 50% of what it was last winter.

MAGOG, QUE,

We expect a revival in trade about May 25th. We are taking out about the same number of logs as last year. Our stock is just about the same as it was a year ago. The volume during 1920 was much higher than the year before.

RESTIGOUCHE, QUE.

We have hopes for a fair demand for 1921. Our output will be about two-thirds of what it was a year ago. In regard to overseas business, there was less demand with falling prices. One handicap in connection with the United States business was the lack of cars.

QUEBEC, QUE.

Our cut last year at our various mills was over 73,000,000 feet, or about a million and a half less than the previous year. The volume of trade was less in 1920 than in 1919. Prices were higher and stocks greater. The situation relating to overseas business was quiet. Our log output this winter will only be half of what it was a year ago, and as far as the prospects for 1921 are concerned, while the market may be slow, we are looking for a steady improvement.

CHAMPLAIN, QUE.

Values should be lower than last year in lumber products during 1921. The cut will be about the same.

ST. PACOME, QUE.

Trade in 1921 should improve as the season advances. The log output will be about 60% of what it was in 1919. Stocks are somewhat heavier than a year ago and prices were

higher in 1920 than in 1919 although profits were about the same. The market in all kinds of wood is very quiet at the present time.

BATHURST, N. B.

Cut will be considerably smaller than a year ago. The prospects for 1921 are fair but it is impossible to state what will happen. These are times when one cannot read the future with any degree of accuracy, so many predictions have gone wrong. Operating costs are still stiff.

CAMPBELLTON, N. B.

The outlook for 1921 is not favorable at the present time. We would assume that the log output this winter will be about 40% less than last. Trade appears only fair. There is no stability and uniformity in prices, and we saw recently quotations differing as much as $15.00 per M on Canadian spruce. Business is very quiet now and we look for an improvement in the early summer. In our opinion the large stocks in New Brunswick owned by the British Government, will be placed on the market at smaller prices than new stocks can be purchased for, which will, of course, curtail the buying of new stocks until the old are about exhausted. We look for the cleaning up of about all the old stocks during the present year.

CHATHAM, N. B.

With regard to what is being done the present year, we have had a meeting of the two large boom companies within the last ten days when returns were given for logs that will probably come into these booms. The South West Boom Co., that had over 90 millions last year, will have something like 40 to 42 millions this year, and the North West Boom Co., that had 43 millions last year will have about 17 millions this year. The above amounts coming into these booms are contingent on the logs being driven. Some of the firms reported that they were undecided whether they would run their mills or not. They are unable yet to say whether they would put the logs off the landings and drive them in. It looks as if business in the lumber line will be very slow in this direction; the quantity being taken out is very small. A great many mills reported they would not operate at all.

Around here there will be 50% less timber taken out than a year ago. The trade outlook for 1921 is not very promising.

SOUTH NELSON, N. B.

Operations in the woods are now practically completed, and the cut will probably not exceed 50% of that of the previous year. In the early part of the season heavy falls of snow and unsettled and inefficient character of labor seriously interfered with skidding, and for these reasons many operators failed to reach their expected cut. Since the first of the year however the weather has been all that could be wished for hauling to the brows. The continued high cost of everything entering logging operations as well as the high rate of wages together with inefficiency of labor will make our logs cost even more than last year. As far as shipments are concerned everything is at a standstill. The greater portion of our lumber is manufactured for and goes to the British market, and although very heavy stocks are held over, our port being closed during the winter months, shipments are shut off during that time. During the years of the war a larger proportion of our stock than usual found its way by rail to United States and Canada, but owing to the depressed conditions of these markets nothing has been done in these directions for some months, so that as stated things are at a stand-still. Owing to the fact that water shipments have been for the past few years have been comparatively light, our yards are very much congested. A large proportion is held by the syndicate of British brokers to whom it was transferred by the British Admiralty at the close of the war. The outlook at present is far from bright, but we are looking forward to spring and the opening of navigation in the hopes that revival of trade in Britain and the United States and an increased supply of tonnage will bring us the relief we greatly need.

NEWCASTLE, N. B.

There will be a normal amount of logs taken out here. Does not look very bright as yet for business this year.

CULLIGAN, N. B.

The cut here will only be about 75% of what it was last winter. Expect a good demand for lumber in the spring.

DALHOUSIE, N. B.

The trade outlook problematical. Cut about half less than last winter.

BUCTOUCHE, N. B.

The log output in this district will be about the same as last year. The trade is somewhat unsettled.

FREDERICTON, N. B.

We feel sure that trade will improve. Prices are down nearly $10.00 per M from what they were a year ago. The cost of logs is slightly less and we will have to cut wages to quite an extent in order to manufacture at a profit. We will not be operating to nearly as large a capacity during the coming year as in the past.

ST. JOHN, N. B.

Fair trade outlook for 1921. Log output this winter only about half of what is was last year. During 1920 the market in the United States was erratic. Stocks on hand are nearly twice as large as those of a year ago, and prices on the average were, in 1920, about $5.00 higher per M than in 1919.

NEW GLASGOW, N. S.

Very little is being done in logging around this section. The trade outlook is not considered very promising.

LIVERPOOL, N. S.

The output in this section will be about half of what it was last year. Prospects for 1921 are doubtful. We had double the stock on hand at the end of 1920 that we had in 1919. The market was high for the first eight months. During the last four months there was practically no demand at all.

BEAR RIVER, N. S.

Our cut of hardwoods this winter will be greater than last but in spruce the cut will be less. The outlook for 1921 is not very rosy; production costs and lessened demand will doubtless, result in lower prices. If the building trade revives, demand should improve. We look for a moderate, steady business during the coming year.

NEWVILLE, N. S.

The log output around here will be 50% less than it was last winter. It is hard to forecast what the trade outlook is going to be, and it is anybody's guess.

STEWIACKE, N. S.

For 1920, our cut was between nine and ten million feet and for 1919, six and a half million feet. The percentage of hardwood was very small. We found the volume of trade greater than in 1919. Profits, due to heavy operating expenses, etc., were much less per thousand than in the previous year. Prices, at the beginning of 1920, were the highest on record, and at the end of 1920, almost back to pre-war figures, a very heavy tumble. Shipments went forward all through the year, but not as fast as the manufacturers would have wished, as the railways were very much hampered not having sufficient rolling stock to handle what was offered. This has particular reference to shipments to the American market. Stocks in Nova Scotia are smaller, we think, than a year ago, and the log output this winter will not be over 25% of an average cut and, should any demand at all spring up, present stocks will not last long. What has been said about the lumber market refers as well to the lath market, with the exception perhaps that there are little or no laths in Nova Scotia at the present time. Regarding the trade outlook for 1921, we would say that we are quite optimistic. The different markets are already showing signs of reviving and Nova Scotia, as well as other parts of the world, is going to build, which will give us a good local market and by next

fall we expect to see the sawn lumber in Nova Scotia pretty well cleaned up, which will augur well for 1922. Looking at the market from all angles, we see no reason for pessimism.

SHULEE, N. S.

We believe that things are getting back to a normal basis. Stocks are heavy and buying is slow. Probably the cost will decrease considerably during the next year so that the present stocks undisposed of will have to compete with future stocks at lower costs. On the whole, lumber is bound to become dear as the supply becomes exhausted and the public is in for a rude awakening in that regard before long. The volume of trade was about the same in 1920 as in 1919. Profits were a little better and prices were about $10.00 higher per M. There were plenty of buyers for lath in the early part of the year, then a slump came on and everything went flat.

SYDNEY, N. S.

The log output around here will not be nearly as large as last year. We expect to see prices a little lower than they were in 1920. The volume of trade and profits during the past twelve months were about the same as a year ago. Prices were a little higher, about 10%, and stocks to-day are about 5% less than at the corresponding period last year.

Have Days of Cheap Lumber Gone Forever?

"There can be no cheap lumber in the future," declared Mr. R. W. Hibberson, of Victoria, B.C., in addressing the Associated Boards of Trade in Vancouver recently. Mr. Hibberson gave warning that a timber famine was inevitable in British Columbia as well as in other less fortunately situated countries, unless adequate measures for conservation were adopted. He held that to meet the requirements of the situation the provincial forest branch should be reorganized.

"To the average man in the street," said Mr. Hibberson, "British Columbia is all timbered. He travels by train, through the interior of British Columbia, or by steamer up the coast, and everywhere looks green; therefore it must be timbered. If you told him there is every danger of timber famine in British Columbia within fifteen years, you would be ridiculed. But there is a very decided danger of a timber famine, and before many years lapse we will all begin to feel it.

"Ten years ago the centre of the logging industry was within a radius of fifty miles of Vancouver. To-day it is from one hundred and fifty to two hundred miles from Vancouver, and in some cases operators are towing logs as far as six hundred miles to their mills, and an average tow of two hundred miles is quite common. Ten years ago the average cost of logging was $5 per thousand feet; to-day it is nearly $20 per thousand feet, and in some of cedar camps last year the cost was over this figure. Ten years ago most of our logging was done within a mile of the salt water; to-day we are hauling by railroad ten to twenty, and in some cases more, miles by railroad, to salt water, before we commence to tow logs to the mill.

Timber Supplies are Receding

"The interior of British Columbia has the same conditions. Where formerly sawmills were built in the heart of the timber, to-day logs are brought distances up to seventy miles by water and by rail. This means heavy expense, and conditions are getting worse every day. The general public is clamoring for cheap lumber. There can be no cheap lumber in the future if the logger and millman are to make a fair profit on their investment. Lumber will steadily rise in price as the timber recedes farther and farther away from centres of population, and the cost of getting the logs to the mill increases year by year.

"Formerly a logger with a capital or five or six thousand dollars could open up a camp and produce logs. To-day his machinery will cost him approximately one hundred thousand before he can commence to operate.

"The price of logs governs the price of lumber, and with the consumer demanding cheap lumber the millman naturally is demanding cheap logs. The logger, in order to get his logs as cheaply as possible, is devastating our forests, cutting only the timber that can be cheaply handled, smashing down all the smaller timber in the process of logging, and leaving in the woods, to rot or to be burnt, some thirty to forty per cent. of the volume of the timber on the ground. He cannot afford to attempt to log much of the timber on the high elevations or on the rough ground. Broken timber is left, and on most operations on rough ground fully half of the timber stand never reaches the mill, it being broken up and left on the ground.

"The virgin growth of timber in British Columbia is steadily decaying and should be cut and marketed, but the young second growth, on which we depend for our future supply of lumber, should be jeaously preserved. At present we are recklessly cutting it for tie timber, poles and mining timber, destroying fully thirty per cent. of it during the operation. It is common practice to leave twenty to forty feet of good, sound butt logs in the woods, because they are too large to hew into ties. The same condition applies to operations where mining timber is being logged. This should be checked, and without waste of time. Depletion of our forests in British Columbia within twenty years with a resultant slump in all enterprise that depends wholly or in part on forest products, can only be averted if action is taken without further delay.

"The action we would propose is that private timber land owners adopt logging methods that will protect and preserve young growth, and leave logged-off lands in condition for forest renewal; then the young trees of to-day will be of merchantable size when needed. This is dependent on keeping fires out of the forests, so that young trees will have an opportunity to grow.

A Thing of Slow Growth

"It has been shown on examination that unless logging slash is burnt over the reproduction is very poor, the heavy slash shading the young seedlings. It is necessary for a fire to follow logging operations in order to prepare the ground for seeding. This should be undertaken by the Government, which can take every precaution to avoid disastrous fires.

"It takes approximately 80 years to produce trees of commercial size that will make ties and piling for the Coast or saw logs for interior mills. Eventually our Coast mills will have to adapt their cutting machinery for small logs, for the virgin timber, once gone, can never be replaced. It takes from 200 to 400 years to produce our large fir timber, and double that to produce our big cedar. The fortunate owner of a tract of virgin cedar and fir will, if only he can afford to hold it for a few years, reap a rich reward.

"The reforestation will have to be undertaken, in the main, by the Government. It is not practicable to enforce the practice of forestry on private timber lands, for the growing of timber of saw log size is an operation too long in time and offering too low a rate of return to attract private capital, always excepting pulp and paper companies, who can use timber long before it becomes saw log size. In this connection, Pennsylvania planted nine million trees in 1919; fifty million trees since 1900, began in 1728.

"Very shortly we shall see a large increase in the number of these plants, and it is to be hoped that Canadian and Empire capital will be behind them.

"In conclusion let me say that it is vitally necessary that newspaper publishers within the Empire should get together and acquire supplies of timber against the time when they will be worrying, not about the price of timber, but about the fact that they cannot get supplies at any price."

Northern Ontario and Georgian Bay Output

Large Increase in Amount of Lumber Sawn Last Year—Lath and Shingle Production Reveal Considerable Improvement—Record Output for Most Plants

The study of statistics is always interesting as when presented from year to year the figures afford some indication of the relative activity and expansion of any great industry.

The returns from leading mills in the Northern Ontario and Georgian Bay Districts indicate that the lumber cut during 1920 was the largest that has taken place in several years. During the period of the war, there was an annually decreasing output of lumber, lath and shingles, but in 1919 for the first time in several years, the returns showed a gain in production of several million feet.

The story of expansion is again told in the figures for 1920. They show that the total cut in the Georgian Bay and Northern Ontario District amounted to 576,074,743 feet b.m. as compared with 492,201,478 feet b.m., in 1919, a gain of 83,873,265 feet b.m. The 1919 cut showed a gain of some 6,000,000 feet over that of 1918. The increase, therefore, during the past year over that of 1919 has been a large one in which nearly all the mills participated.

There were many favorable factors during the past twelve months. A good strong demand existed in the early part of 1920, labor was abundant in most sections, shipping facilities were good, competition in purchasing was keen and a good deal of industrial and residential building was in progress. Toward the autumn demand fell off and structural operations subsided, and the heavy advance in freight rates proved to be a handicap which even diminishing prices could not overcome.

In lath, the output in 1920 in the Georgian Bay and Northern Ontario District was 162, 555,063 pieces as compared with 124,066,403 pieces in 1919, being an increase of 35,508,256 pieces. This gain was caused no doubt owning to the scarcity of and high price for lath which prevailed a year ago. As a result many mills put their former idle lath departments in operation while a number of men in the country went into the business as a side line. Although there was a greatly augmented production, the price of lath held up very well during the whole year and the long thin pieces of white uine and spruce were in pretty fair demand.

The shingle industry also revealed a healthy growth, there being an output of 15,505,000 pieces in 1920 as against 4,803,750 pieces in 1919, an increase of 10,702,250 pieces over last year.

In the shingle line, the largest producing districts in 1921 were Owen Sound, Bracebridge, Kearney, Snow Road, Lindsay, Penetang, Marmora and the North Bay section.

The following are the statistics in detail, for the various areas. They are as accurate and complete as it has been possible to gather, and the "Canada Lumberman" desires to express its gratitude to the many manufacturers who have co-operated with it in securing the returns. In cases where no figures have been received an estimate of the production of 1920 based upon that of 1919, has been given.

Georgian Bay and Northern Ontario Production

Lumber

	Feet 1920	Feet 1919
Bala	2,750,000	3,000,000
Biscotasing	1,300,000	2,250,000
Bracebridge	7,200,000	5,850,000

Totals	162,555,063	127,046,807
Increase for 1920 over 1919		35,508,256 pieces

Ottawa Valley Lumber Exports Grow

An increase in lumber alone amounting to 22,780,000 feet over 1919 netted exporters of the Ottawa Valley during 1920, an increase of $1,709,431. This is reflected by the issuance of figures by the American Consulate at Ottawa, covering the Ottawa Consular District, for the year 1920.

The chief factor which contributed to the total increase in American exports amounting in all to $1,476,537 was brought about by the exportation of rough lumber, which jumped from eighty-one odd million feet in 1919 to over one hundred and eight and a half million feet in 1920.

The gain brought about by lumber, however, was materially cut down in value by the decrease in the exportation of lath, pickets and shingles, and pulpwood.

On the total value there was a gain of $1,476,537, though there was a total decrease of over forty-eight million feet, cords, and pieces as compared with 1919. The total value of exported lumber products to the United States was $7,031,356 as compared with $5,554,719 in the preceding year. In 1920 there were 160,756,574 feet, pieces, and cords exported as against 208,816,183 in 1919.

The exportation of dressed lumber declined by almost four million feet, but increased in value. Tongue and groove showed an increase in feet, and also in value. Lath dropped away off, pickets gained, and shingles followed lath. Pulpwood dropped in both cords and value.

The exports were as follows:

Exports from Ottawa Consular District, 1920, to United States

Lumber

	1920 feet	Value	1919 feet	Value
Dressed lumber	18,456,599	$ 997,977	22,644,448	$ 928,606
Tongue and Groove	406,855	23,228	389,425	16,531
Rough lumber	108,667,976	5,319,522	81,717,108	3,686,159
Total	127,531,430	$6,340,727	104,750,981	$4,631,296
Increase in feet over 1919				22,780,449
Increase in value over 1919				$1,709,431

Ottawa Valley Lumber Cut Drops Ten per Cent.

Returns for 1920 Show Decline of Twenty-six Million Feet—Large Increase in Output of Lath—Past Year More Active Than Generally Thought

By Everett Andrew, Ottawa, Ont.

Lumber production in the Ottawa Valley mills in 1920, with all companies reporting, showed a decline of 26,030,350 feet as compared with the season of 1919, when 301.700.350 feet were cut.

Latest returns furnished the "Canada Lumberman," through the co-operation of mills and their officers, show that the 1920 output of the plants, amounted to only 275,670,000 feet—the smallest cut that has been made during the last four seasons, counting this season's operations out.

Instead of being 297,950,350 feet for 1919 (as previouslsy stated in the last Statistical Edition of the "Canada Lumberman") later figures have shown that the cut reached 301,700,000 for that year. As compared with 1917 the decrease in production amounts to 152,-660,987 feet in lumber alone.

On a percentage basis the cut of 1920 is roughly ten per cent. lower than last year, and as compared with 1917, on the same basis, is approximately only nine-fourteenths of the 1917 output.

Lath production increased nearly three million. Shingles fell behind the 1919 figures by nearly a million and a quarter. United States exports gained, even over 1919, by almost one and one-half million dollars.

The furnishing of figures of the actual 1920 output, may come as a general surprise to the industry, as it has, for the past six or seven months been predicted in trade circles, that the Ottawa Valley would show a heavy decrease. It did not happen to the extent expected, and whatever this season's operations bring forth, the criers of depression have been, by the statistics furnished, figuratively "howled down."

Even a two hundred and seventy-five million cut in lumber can, even to a layman, show that the lumber trade is on its feet, and is battling to come back strong. The daily press, or the present day costs of lumber may not say so, or report the occurrence. But usually, what is planned by the heads of the companies, and takes place in the bush, becomes an actuality in the public mind one or two years later.

The outlook for the coming year, which at the date of writing, is problematical, is indicative, with present stocks, of being good for the lumber business. Peak prices may not stay where they are. The chances in the Ottawa market are that they will drop away before July 1st, but, by then some of the green cut will have arrived, which this year should not cost as much to manufacture.

This year's wood programme, as originally mapped out, is doubtful, and the chances of an increased cut are not too bright.

Speculation as to what may or may not happen within the next six months in the Ottawa Valley could go on indefinitely, but to put the whole "price and dry stock question" on the "bone dry" list, it is well to reflect on the purchases made by the late Sir James Ball, British Timber Controller, in 1919, the total stocks of which are not all out of Canada yet.

A divergence of opinion exists at Ottawa, as to whether stocks should go lower. Some members of the trade thought they would, while others were of different opinion.

Taken on the whole, it is a debatable question whether the volume of trade in the Ottawa Valley done by the manufacturers was greater or less than in the preceding year. Reports from some companies indicate that it was larger, while other organizations report that it was less by as much as thirty per cent. Still other concerns placed it at being about the same. Profits with some of the mills were reported as being better than in 1919, but this view is not expressed by all the companies in the Ottawa Valley.

Prices were higher by from ten to twenty per cent., the reports showing that on the average they ranged about 15 per cent., or from five to seven dollars per M over 1919. Stocks also are doubtful, with some companies they are larger than in 1920, and with others less. "All sold," was the reply of one company and "double amount on hand" said another.

Conditions for the sale of shingle and lath were good during the early part of 1920, but in the latter part of the year fell away off and there was little trading. This was largely caused by the curtailment of building operations and heavy purchases made early in the year by American yards.

Trade with the United States was chiefly characterized by the advance in freight rates, which had considerable to do during the latter part of the year with the decline in business. The exchange situation was another factor, but many alterations, which arose from this have been in the main adjusted, by the simple expedient of specifying at the time of sale whether the payment was to be made in Canadian or American funds.

Exports of lumber from the Ottawa Valley companies to European countries fell off from twenty-five to thirty per cent. during the year. For the first six months business was fairly good, but, in the last six months the bottom seemed to drop out of the European market, as it did in the American market. The decline in the English exchange rate badly upset the situation. At the opening of the year the pound sterling stood at around four dollars and at the end of the year it had strengthened by about ten cents per pound.

The production figures are as follows:—

Ottawa Valley Lumber Production

	1920 Feet	1919 Feet
W. C. Edwards & Co., Ottawa, Ont.	60,000,000	60,000,000
John R. Booth, Ottawa, Ont.	43,000,000	40,000,000
Pembroke Lumber Co., Pembroke, Ont.	22,000,000	22,000,000
McLachlin Bros., Arnprior, Ont.	18,000,000	27,000,000
Gilmour and Hughson, Hull, Que.	18,000,000	20,000,000
Colonial Lumber Company, Pembroke, Ont.	17,500,000	20,000,000
Fassett Lumber Co., Fassett, Que.	14,100,000	18,400,000
James MacLaren, Buckingham, Que.	14,000,000	20,000,000
Hawkesbury Lumber Co., Hawkesbury, Ont.	13,000,000	15,000,000
Gillies Bros., Braeside, Ont.	8,600,000	12,000,000
Dennis Canadian Co., Whitney, Ont.	7,000,000	5,000,000
James Davidsons Sons, Ottawa, Ont.	7,000,000	6,000,000
Shepard and Morse, Ottawa, Ont.	7,000,000	8,000,000
Riordon Pulp and Paper Co., Calumet, Que.	6,750,000	6,000,350
R. and T. Ritchie, Aylmer, Que.	4,000,000	3,000,000

Montreal Market Was Good One on the Whole

First Nine Months of 1920 Characterized by Record Business—Question of Supplies Was Uppermost With Price a Second Matter—The Aftermath and How it Has Been Met—Export Trade Was Fair With Plenty of Liner Space Available—Pulp Plants Enjoyed Large Measure of Prosperity—Many New Concerns Entered the Canadian Field—The Outlook For 1921.

The past year was one of marked contrasts so far as Montreal was concerned. It is pretty safe to say that few if any in the lumber trade anticipated the almost sudden transformation of a good market into one in which there was for a time absolute stagnation and a very substantial fall in values.

The first nine months were characterized by good business and almost continuous rises in prices, particularly in the hardwood section, where they went out of sight. Orders were excellent in practically every department and the fact that lumber was not very abundant helped to keep the market very strong. Price was sometimes of little consideration to the buyer—he wanted the goods and was prepared to pay very high prices for them.

The position was such that quite early in the year there were reports from Ottawa that the Government was being urged to restrict export of our lumber to the United States—of course nothing came of the move, but it was significant as showing the keenness of the Canadian demand. American buyers came freely into the market, and in the spring there was a very decided shortage of cars.

During the summer, business as usual slackened off, but it was still satisfactory. Then came the slump. There have been various theories as to the cause of the fall in commodities—but it is felt, now that the event has occurred, that a general decline was merely a matter of time. Lumber shared in the general relapse and will return with the coming of better trade. There are already signs of distinct improvement. Large consumers and the yards were affected by the wave of price cutting started in the United States, and refused to buy in the belief that the bottom had not been reached. The result was that the demand practically ceased. Taking 1920 as a whole, the Montreal market was a good one, and wholesalers admit that it produced profitable business.

The Building Situation Reviewed in Montreal

Every section of the market was affected by the rise and the decline in demand and values. B. C. produces were at one time ordered very freely, but when the demand for the United States fell away, the goods were offered in Eastern Canada at a big reduction. The orders for spruce and pine for across the border constituted a satisfactory volume on the whole; when building fell off, the demand was nil. Hardwoods generally reached what is now regarded as ridiculous values, but during the boom—for boom it was—it was a question of getting supplies and not of price.

As far as the local situation in Montreal was concerned, the amount of construction work, as shown by the building permits, was the best since the war. These were $4,033,708 better than in 1919, which in turn was higher by $5,150,228 than 1918. Prospects for the current year are regarded as bright. There are several large projects proposed, and both contractors and supply men anticipated a very active building season. Many materials used in building are now on a lower level, and this should stimulate construction. The local yards at the end of the year had little stock on hand, and bought only such lines as they required for immediate use. The sash and door and other woodworking plants were well employed during nearly all the year, having secured some very good contracts outside the city.

Heaviest Export in Eight Years

Taking into consideration, the lumber situation in the U. K., th export firms shipping from the port of Montreal had a fair season. The total was 109,355,497 feet, a decrease of 35,020,285, as compared with 1919.

The following table gives the figures since 1903:

	Ft. B. M.		Ft. B. M.		Ft. B. M.
1903	231,225,695	1909	117,946,895	1915	106,515,024
1904	153,689,912	1910	117,806,706	1916	104,698,013
1905	157,013,256	1911	103,473,220	1917	39,429,497
1906	146,765,423	1912	109,370,764	1918	58,939,091
1907	117,429,175	1913	105,819,167	1919	144,375,182
1908	107,934,057	1914	71,401,401	1920	109,355,497

The steamship companies put on a large number of vessels, and in addition there was an unusual amount of tramp tonnage available. Rates at the opening were around 300 s. per standard, but as the season progressed several exporters objected to the rates as too high and chartered tramps at about 200s. The liners, after some hesitation, were compelled to follow suit, as they found that business was falling off. General freights were not abundant, and the liners were naturally anxious to get as much traffic as possible.

At the opening of navigation lumber exports were slow, but they gradually increased, both to the United Kingdom and South America.

The outstanding feature of the year was the purchase by the Associated Importers, a combination of British firms, of the stocks purchased by the British Government during the war in the Maritime Provinces. Only a comparatively small portion of the stocks was shipped during the season, for sale in Great Britain. The entire stocks were sold as they stood, but subjected to survey as to quantity. The goods are now being surveyed on behalf of the Government.

Cox, Long & Co., also purchased the stocks of lumber in the Maritime Provinces belonging to the French Government—about 40,000,000 feet. Part of this has been disposed of to Canadian buyers and part to other exporters.

The past season's shipments have been governed to a certain extent by the exchange situation and partly by the position in the U. K. Stocks in Great Britain are very extensive, and these heavy stocks and the fall in price have tended to restrict shipments. Until these stocks are moved into consumption at a more rapid rate, the prospect is that exports will not increase, and that those mills, who manufacture for the overseas trade, will be compelled either to make less lumber or to find an outlet for it in Canada or the United States.

Judging by the sailing lists, there will be plenty of liner space available for next season. The C.P.O.S. have 75 sailings out of Montreal, and 17 out of Quebec, which is an increase of liners running into Montreal and a decrease of those into Quebec.

Due to a scarcity of wood and a firm demand, prices of pulpwood increased considerably. The comparatively small quantity of wood available was going to a poor market in the summer of 1919, and a consequent disinclination to cut wood and also to finance operations. The demand from the Canadian mills was exceptionally strong, the unfavorable weather conditions precluding many Canadian companies from cutting wood from their own limits.

Pulpwood Rose Rapidly in Price

The price of peeled wood advanced from $23 to $39 per cord delivered, at Watertown. Part of the rise, say, from $3 to $4 was due to the higher railway rates, so that the real advance was from $23 to $35. At some points the price increased 100 per cent.

The prosperity of the pulp and paper companies was emphasized during the past twelve months. The exports were the highest on record, in fact the demand was better than the supply in some directions, and with this fact may be coupled that of every substantial advance in prices, although the best quotations were not maintained.

The mechanical pulp department experienced an active demand, with a slackening off towards the end of the year, counteracted in part by smaller production at some of the mills. As regards chemical pulp the mills were unable to meet all requirements, with a consequent strong market at exceptionally high prices, which, however, reacted somewhat during the latter months. The exports nearly doubled in value. The outlook for the current year is stated to be bright, as owing to the anticipated heavy tonnage in newsprint there is likely to be a good demand for chemical pulp. The Canadian newsprint mills produced the largest tonnage on record, which represented a gain of about 15% over 1919. All the plants were operated to capacity and prices for spot lots reached exceptionally high figures. Canadian manufacturers have sold practically their entire tonnage for 1921 on a contract basis.

Under these satisfactory conditions it is not surprising that a number of new concerns entered the field in 1920. that others are planned, and that the established companies spent large sums in extensions extended from Coast to Coast, being particularly marked in the Province of Quebec, where American interests continued to embark capital. The industry is attaining larger proportions each year, and as the demand for wood products is likely to be still heavier as time goes on, Canada with her good supply of raw material, stands in the happy position of possessing an industry of enormous possibilities. The companies have continued to take great interest in reforestation, and two or three are spending considerable sums in aviation work with a view to promote this end and that of forest protection.

Quebec Lumber Operations Now on Sane Basis

Shipments of Lumber and Timber Show Falling Off—Exporters Optimistic and Feel Confident There is no Real Cause for Worry—Some Statistics

The lumber trade, as far as it refers to the district of Quebec, is to say the least in statu quo, and the Quebec exporting firms are adverse to expressing their opinion as to the near future of the export business to the United Kingdom for the summer of 1921. The reports being received from their European agents are not very encouraging; nevertheless the feeling is not pessimistic. The whole difficulty that seems to cloud the situation is due to the enormous quantity of wood purchased by the Imperial Government during the war, and the quantity still stored along the south shore of the St. Lawrence as far as Campbellton, N.B. This lumber, which was bought from the Imperial Government by a syndicate of British importers, must be shipped to the other side and disappear before the Canadian export trade commences to boom again. This phase of the situation is acknowledged by Quebec manufacturers and exporters to the United Kingdom, and one of them, in giving his opinion to the "Canada Lumberman's." correspondent, said: "The present situation is mystifying, and until the wood bought by the Imperial Government during the war and sold to a syndicate of British importers is shipped from Canada and distributed in the United Kingdom for consumption, the present backward condition is likely to prevail.

"Another drawback is the very limited construction going on in the United Kingdom, due to labor unrest, and the reluctance of capital to invest in construction, owing to the apathy of the working classes to produce by their labor, and likewise the crushing effects of taxation due to the war."

In the meantime, local conditions are beginning to brighten and there is every reason to believe that the month of April will initiate a new era in construction work. People appear to be only commencing to forget the war and its aftermath in the high cost of living that caused capital in this section of Canada to dread investments, especially in building. This hesitancy is, however, gradually lessening, and judging by inquiries, it is evident that the public is gaining a new confidence. In Quebec city alone there is a shortage of 2000 dwellings to accommodate the growing population, and by the decline in the value of building material and price of labor, it is expected that a beneficial reaction will set in with the coming spring.

Pulpwood Demand Bound to Return

The pulpwood situation is on a par with lumber and the Quebec dealers have no idea in their vision as to when a change for the better will come this way. The price of pulpwood dropped considerably during the months of January and February and in some instances when the banks were demanding a return of their advances, the wood sold as low as $10 per cord. This price, however, was only confined to a few owners of the wood, as all those who can afford to wait are holding on to their goods and biding their time for a rise in the prices that must surely come with a renewed demand in the near future. In the meantime, there are signs that a demand is not far distant, as witnessed by inquiries from American mills, who are offering $27 per cord for pulpwood for which they paid as high as $36 last fall, delivered to the mills. The Quebec dealers are offering to sell for $32 delivered, but their offers are being refused with the information that the American mills are obtaining their supplies from the State of Maine and from the Adironacks for $25 per cord at the mills.

Reviewing the present in comparison with the past five years, the lumber trade in so far as it reflects on the district of Quebec leaves very little cause for complaint. Prior to the war, business was stable and the demands from the United Kingdom markets were sound on a conservative basis that permitted the Quebec manufacturers and exporters to gauge their operations in the woods and their mills without worry. The advent of the war at the beginning did not alter the demand to any remarkable extent, especially in reference to the United States markets, and not until it was realized that the war would extend into years, was a halt caused. In the meantime the Imperial Government became a larger purchasing power that had the effect of big Canadian sales and of advances in prices. The close of European hostilities found a tremendous quantity of wood cut, manufactured and stored in Canada for the Imperial Government—this naturally had a deterring effect. However, the Quebec lumber interests kept on cutting and manufacturing without much anxiety notwithstanding the cost of labor and other essentials, as the prices of lumber kept pace until the early part of 1920, when a reaction set in that brought down the figure. This phase of the business game inoculated a spirit of caution, with the outcome that the cut on Crown Lands was reduced this winter by 30 per cent., and the same applies to privately-owned lands. The cut of spruce was reduced 40 per cent. with the result that this species of wood is now holding its own in the market, having found its bottom in price and is likely in the near future, on account of the reduction in cut, to advance in value.

European Call for Canadian Goods

A retrospective view of the trade in all its branches, as far as the district of Quebec is concerned, leaves very little to complain of. The question at issue in the present causing some anxiety is the uncertainty of the United Kingdom market is the dark cloud that still continues to overhang the European political situation, retarding the world's economic construction, and the spirit of unrest and nervousness that permeates the people. Nevertheless, the Quebec exporter is optimistic, and, as one of the members of a leading firm in this city said to the "Canada Lumberman's" correspondent, "we will be able to analyze the situation before the end of March, as we have experts at work on the other side, and though the reports, so far, are not very encouraging, we feel confident that there is no real cause for worry. Our goods are needed for reconstruction and regular lines of construction, and we will not in the Canadian trade, be called upon to make any sacrifices.

Crown Lands Wood—Port Shipments

According to the latest returns of the Quebec Department of Lands and Forests, the cuts of wood for the year 1920 on 69,963 square miles of Crown Lands, were as follows: 1,850,679 pieces of white pine, oak and walnut for billets and booms giving a B.M. feet of 138,237,957. Red pine, white cedar, maple and tamarac for billets and booms 1,258,883 pieces, giving 64,019,004 feet B.M. In spruce, satin grey pine, birch, poplar, etc., 27,860,362 pieces were cut, giving 900,585,395 feet B.M., and it is calculated by the Department that a similar quantity was cut on privately-owned lands, also that the cut for 1921 will be 30 per cent. less than in 1920.

In a comparative statement furnished by the Quebec Harbor Commission, there were shipped from Quebec from 1915 to 1920 inclusive the following quantities of wood to the United Kingdom. This does not, however, include the various small ports east of Quebec on the north shore of Chicoutimi and further east, or the south shore ports and mill centres east to Gaspe.

1915—27,963 standard of deals cut, 9,199 feet square timber.

1916—33,236 standard deals, 1,438 loads of timber, 1,743 standards spool wood; 19,192 cords pulpwood.

1917—4,653 standard deals, 6,213 square feet of timber and 683 standard spool wood.

1918—125,720 cubic feet timber, 2,918,431 feet B.M. timber; 109,134 feet B.M. birch; 11,513,393 feet B.M. lumber sawn; 2,618,867 bundles spool wood; 818,882 feet B.M. spool wood.

1919—61,852,743 feet B.M. sawn lumber; 15,253,189 feet B.M. timber; 3,965,753 feet B.M. spoolwood; 1,574 tons pulp; 3,754 cords pulpwood.

1920—36,795,010 feet B.M. sawn lumber; 13,170,490 feet B.M. timber; 468,746 feet B.M. spool wood; 391,994 bundles spool wood; 67 cars dry pulp; 97 cars wet pulp.

Export to United States From Quebec

The following is a comparative statement of wood, etc., exported to the United States during 1917-20, from U.S. Consular district of Quebec.

Budget of Breezy News From the East

One of the largest timber land deals recorded in the East in many years was consummated recently when 85,000 acres of the vast expanse of forests along the headwaters of the St. John River, Big Machias and Allagash rivers in Northeastern Maine, and valued at $42,000,000, became the property of the Allagash Land Company, of Bangor. It was purchased from H. F. Eaton, of Calais. This transaction gives the company title to all but one township of the former Eaton holdings, 262,000 acres of which are on the St. Croix River.

Statistics recently compiled show how many feet of spruce, pine and cedar logs carried over from one season to another in the South Bay booms, operated by the firm of James Holly & Sons, St. John, N.B. The vast majority of the logs were spruce and the remainder consisting of pine and cedar:—

1916 & 1917	1917 & 1918	1918 & 1919	1919 & 1920	1920 & 1921
20,500,000 ft.	13,000,000 ft.	20,000,000 ft.	15,000,000 ft.	24,000,000 ft.

These figures show that more logs were carried over during this season than any since 1916.

Air patrols for the protection of the forests of New Brunswick will be used this summer by the provincial government. Premier Foster recently announced that allowance for the expenditure is being made in the estimates for the year. The Canadian Air Board will furnish the machines, but it is up to the province to provide the pilots, observers and mechanicians. What success will result from this new step towards combatting the dread menace "fire" will not be known until time rolls on, as this is merely an experiment. If it proves successful there is no doubt it will be a permanent weapon for use in protecting the forests of this province. Two or three machines will be used this year and if success attains their efforts more will be added in the future. There are many parts of the forest where it is impossible to observe from the ground and in the dry season a fire once started would make alarming headway before detected. The fire menace has always been considered a serious one and the present government is doing everything possible to prevent the destruction of valuable timber lands. It is considered better to conserve, rather than be compelled to reforest. It is expected that the saving effected by a system of aerial watchmen will more than pay for the expense incurred.

R. W. McLellan, of Fredericton, president of the Canadian Realty Co., who recently returned from New York, expressed an opinion that the American lumber market will soon pick up and afford a profitable outlet for the surplus lumber this province may have to offer. His report regarding pulp wood is not so bright as the mills are so heavily overstocked.

James P. McAllister, a well-known resident of St. John, N.B., died recently. He was formerly one of the best-known men at the headwaters of the St. John River, where he was employed as a lumber operating foreman for the Temiscouata Lumber Company for nearly a quarter of a century. He is survived by his wife, one son and two daughters, one sister and four brothers.

A controversy regarding building operations, the cost, etc., was recently conducted through the press in St. John. One letter published lately contained data, which was refuted by C. S. Christie, managing director of the Christie Woodworking Co., Ltd., St. John. He maintains that the man who is considering building will find prices much more encouraging this spring than last. He quotes retail prices as follows:—

	Feb. 14, 1920	1921
Lath	$ 16.00 per M.	$ 8.00
Merchantable spruce boards	49.00 per M.	44.00
Fir flooring	100.00 per M.	85.00
Spruce scantling	50.00 per M.	42.00
Hemlock boards	50.00 per M.	45.00

Birch flooring sold at $150. It went to $200, and is now $185. He said that with reductions in shingles, fir doors, and a big drop in glass; with linseed oil down $1 per gallon, turpentine down $1.20 a gallon, and reductions on lots of other items that figure in the cost of building, there is no cause that we can see for Builder to get pessimistic.

Lumber Shipments from Nova Scotia Increase

Shippers and Manufacturers Feel that Bottom of Market has Been Reached—Inquiries are Becoming Numerous and Confidence Prevails Generally

By "Onlooker"

The statement published in this issue of the "Canada Lumberman," showing the exports of lumber from Nova Scotia for the fiscal years 1917 to 1921, will furnish some idea of the value of this important industry to the province and the extent of the foreign markets which are open to our shippers. As this does not include the lumber consumed in the province itself or what has been shipped to Upper Canadian points, the value of the total output of the province is very much greater than these figures indicate.

The period covered embraces the last three years of the war and the two years that have elapsed since the war ended.

A careful survey of these figures discloses some interesting facts and information that may be useful to those engaged in the lumber business. It may be noted to what a low ebb our exports were reduced, especially to Europe just before the close of the war, when the submarine menace had assumed such serious proportions.

In 1917 exports to the United Kingdom were much less in volume than the average of previous years, and from 1917 to 1920 sustained a very rapid decline, due in large measure to the increasing scarcity of tonnage and the diversion of available tonnage to other purposes. Up until March, 1920, all shipping owned by English companies was under the direct control of the British Government, and during this time it was practically impossible for private exporters to secure liner space, while freight and insurance rates were so high as to render shipping by sailers prohibitive.

Big Demand From United States

In 1917 and 1918 the United States used large quantities of our stock, owing to the demand created by the enormous orders for war material placed in that country by the Allies.

After the close of hostilities in Europe this market fell off for a time, but in the spring of 1920 it returned again, and in actual value the shipments to the United States for the fiscal year 1921 exceeded those of any of the previous years. By far the greater part of this stock was shipped by rail, and had our transportation systems been equal to the demand made upon them the quantity of lumber sent forward would have been very much greater.

A few years ago France was one of our best customers. In fact so well established was business with this country that some of the larger mills manufactured each year a certain portion of their cut into what was known as "French deals." The French market called for certain sizes and these were marked in the French system of measurement. In 1917 and 1918 the French Government drew quite heavily on the stocks they had purchased in this country, but after the war was over they sold out the balance of the stocks they had over lying in Nova Scotia and New Brunswick to an English company, and since then there has not been a shipment of deals made to France from this province.

Probably the strongest factor in bringing about this unfortunate condition was the serious discount on French exchange, but this is gradually recovering, and as soon as surplus stocks that were accumulated in France during the war for military purposes have been absorbed, in all probability shipments will be resumed on the old basis.

Current Conditions in the Trade

Notwithstanding the fact that the demand for lumber has shown little improvement since the beginning of the year, the general feeling is one of confidence in the not distant future. Shippers and manufacturers feel that the bottom of the market was reached some weeks ago, and that as soon as the stocks that were forced on the market at sacrifice prices are absorbed they will be able to sell at satisfactory prices. That this feeling is not induced by the natural desire to see matters improve, but that it is justified by actual conditions is borne out by the fact that enquiries from outside buyers are becoming more numerous, and although the ideas of buyers and sellers may not yet altogether coincide, quotations are not being treated with the scant courtesy they received a short time ago, and some of the more fortunate or more aggressive dealers already report a fair volume of business.

The output of new lumber this winter is going to be very light, in spite of ideal conditions in the wood for carrying on lumbering operations. None of the mills will have an average cut. The Davison Lumber Company of Bridgewater, whose plant is the largest in the province, is reported to have closed down indefinitely, and many of the small portable-mill operators stopped work early in the season, owing to the uncertainty of the market.

In view of this, some dealers look for an acute shortage of suitable building sizes by mid-summer, and predict that the demand for manufacturing and crating purposes will absorb what old deals and scantling remain in the country.

Local yards have not yet shown much disposition to stock up for the coming season, which is not surprising at this time of year. However, owing to the shortage of houses, particularly in Halifax, and the building that has been deferred in other of the larger towns, the demand for local consumption is expected to be well up to that of previous years, and will be felt as soon as weather conditions allow the commencement of building operations.

British Market Not Up to the Mark

The British market is still very unsatisfactory, in spite of the fact that shipments have been practically suspended for the past three or four months. Reports have been received of sales in Liverpool and Manchester at prices that would scarcely pay the cost of manufacture in this country. While such reports are probably greatly exaggerated, and such sales, if they actually do occur, are rare and possible only through some unusual circumstance, they disclose the unhealthy condition of the market, which calls for some remedy before the resumption of satisfactory business will be possible.

One of the most promising features of the present situation is the rise in the rate of Sterling exchange, and another is the conciliatory attitude adopted by the steamship companies. Liner rates were reduced about the beginning of the year to 135 s., and as this did not result in the expected booking of space, it is confidently expected that a further decrease will be offered in the near future.

Owners of sailing vessels which were last year and the year before engaged in the deal trade between Nova Scotia and the United Kingdom, are viewing the situation with no little anxiety. It is true that wages and the cost of supplies are considerably lower but the "overhead," such as insurance and port charges, are still very high, and if, as is predicted, the rate for sailers falls below 100s., the chances are they will have to retire from the field, and the business will in all probability revert to Norwegian and other Scandinavian carriers as in former days.

Exports From Nova Scotia to Other Countries

The following table shows the exports of lumber from the province of Nova Scotia to various countries during the fiscal years ending March 31st, 1917, to 1920, and for the first nine months ended January 1st, 1921. The first figures in each column represent the number of million feet, and the second row the value of the product:

Summary:

	1917		1918		1919		1920		First nine months 1921	
	M. ft.	Value	M. ft.	Value	M. ft.	Value	M. ft.	Value	M. ft.	Value
Great Britain	125,845	1,743,997	27,971	574,890	11,322	244,110	121,201	33,880,248	68,469	2,452,975
United States	46,215	760,438	41,615	792,283	21,888	553,119	13,508	419,967	20,808	763,503

Other countries	9,796	216,637	7,841	220,079	8,830	350,274	6,216	282,103	6,305	293,108
Total	233,374	3,692,466	107,220	2,216,049	56,832	1,707,367	154,980	5,142,795	115,570	4,465,374

St. John Shipments Show Considerable Drop

Outlook For Present Year is Brighter Than For Some Time—Figures Showing Cargoes That Have Gone Forth Each Month—Cut is Smaller

Lumber shipments through the port of St. John, N.B., during 1920 were considerably lower than in the preceding year. This was due to prevailing conditions of the lumber market all over the country. Regarding the market at the present time, there is said to be no betterment in sight and the prospects for the near future are only fair. The outlook for shipments is, however, brighter.

One of the leading lumber shipping firms in New Brunswick, Geo. McKean & Co., Ltd., recently compiled figures showing the amount they shipped from St. John. It will be seen by the statement furnished that for eight months during 1920 their shipments were good, but the last four months registered nil. A comparative statement with 1919 follows:—

	1919	1920
January	1,146,573	3,043,872
February	.....	2,720,996
March	1,083,861	3,787,771
April	1,778,456	2,149,377
May	1,616,568	1,134,779
June	2,080,851	4,413,764
July	375,659	417,059
August	13,065,262	3,287,669
September	5,150,545	.....
October	4,788,235	.....
November	2,723,144	.....
December	7,875,377	.....
Totals	41,684,531	20,955,287

This statement shows that the past year was more than holding its own until the slump in September. The shipments since the first of the year, by this firm, have been encouraging. Large quantities have been arranged for and steamers and sailing vessels are expected regularly to carry the product overseas.

In addition to shipping from the port of St. John this firm also ships extensively from Halifax, N.S., Pictou, Miramichi and West Bay. Their figures are not as yet available.

In January one vessel loaded by this firm took away over 2,000,000 feet to England; the large freighter Lord Strathcona has completed loading for them, and is taking to an English port over 4,000,000 feet. Another vessel in port has been chartered to take 1,600,000 feet overseas, and another is due about March 1 to take about the same quantity. Thus it will be seen that the outlook for this year is brighter from a shipping standpoint.

Foreign Shipments Decrease

Foreign shipments from the port of St. John by the firm of Stetson, Cutler & Company also show a falling off during the last four months of 1920. Their monthly shipments were as follows:—

1920	Sup. Ft.
January	5,704,549
February	8,010,391
March	2,196,852
April	8,273,972
May	823,991
June	4,273,890
July	886,564
August	3,216,022
September	590,921
October	37,559
November	14,083
December	515,434
	34,544,228

This shows a falling off of approximately 24,000,000 feet in comparison with 1919. The figures include 1,725,000 feet which was shipped to the United States by rail. The balance was shipped out of this port to English, Irish and South American ports. Shipments to date have been most encouraging and from all indications this year will see a marked improvement.

Imports and Exports of Canadian Lumber to U.S.

The annual imports of lumber and timber into Canada from the United States and similar exports from the Dominion to Uncle Sam's domain are always interesting.

Following is a concise statement from W. A. Warne, Chief of the External Trade Division, Ottawa, on the imports of lumber and timber into Canada from the United States, according to the Canadian import trade classification, for the calendar year 1920, and the exports of Canadian lumber and timber from Canada to the United States, according to the Canadian export trade classification, for the same period:

Imports of Lumber and Timber Into Canada From United States
(Year Ended December 31, 1920)

	Unit of Quantity	Calendar Year, 1920 Quantity	Value
Lumber and timber, hewn or sawn—			
Lumber and timber, planks and boards, when not otherwise manufactured than rough sawn or split or creosoted, vulcanized, or treated by any other preserving process:—			
African teak, amaranth, black heart, ebony, boxwood, cocoboral, dogwood, lignum vitae, persimmon, red cedar and satin wood			58,412
Cherry, chestnut and hickory	M ft.	12,631	1,346,141
Gumwood	M ft.	13,071	1,130,161
Mahogany	Feet	2,448,302	615,793
Oak	M ft.	43,044	5,206,238
Pitch pine	M ft.	33,318	1,660,432
Redwood	Feet	258,883	19,169
Rosewood	Feet	9,055	3,747
Sandal wood	Feet		
Spanish cedar	Feet	66,047	14,327
Sycamore	Feet	75,658	7,434
Walnut	Feet	2,138,364	370,188
White ash	Feet	647,555	121,801
White wood or yellow poplar	M ft.	5,095	622,933
Lumber and timber, n.o.p.:—			
Laths	M.	8,355	80,258
Lumber, rough sawn, or dressed on one side only, n.o.p.	M ft.	52,546	3,336,595
Pickets			2,755
Pine and spruce clapboards	M ft.		
Sawn boards, planks, deals planed or dressed on one or both sides, when the edges thereof are jointed or tongued and grooved	M ft.	2,288	191,398
Shingles	M.	8,325	30,552
Timber, hewn or sawn, squared or sided or creosoted, etc.			150,435
Total lumber and timber			14,968,769

Imports of Canadian Lumber and Timber From Canada to United States
(Year Ended December 31, 1920)

	Unit of Quantity	Calendar Year, 1920 Quantity	Value
Lumber and Timber:—			
Laths	M.	431,993	$3,982,740
Pickets	M.	45,616	514,322
Planks and Boards:—			
Pine	M ft.	425,067	19,247,426
Spruce	M ft.	601,184	23,219,804
Other	M ft.	280,255	12,252,000
Shingles	M.	1,936,505	11,249,942
Shooks	.....	.....	177,051
Staves and other bolts	....	.....	.....
Staves and headings	....	.....	127,036
Timber, square:—			
Douglas fir	M ft.	2,551	72,106
Hardwood	M ft.	422	23,253
White pine	M ft.	67	3,301
Other, n.o.p.	M ft.	1,591	48,679
All other lumber, n.o.p.	....	.....	72,315
Total lumber and timber			70,990,975

How Lumber Sales Rose and Fell in Ontario

Record Prices and Feverish Demand Marked Opening Period in 1920—Then the Requisitions Subsided, Prices Fell and Conditions Became Stagnant—Production Costs Still High With Logging Operations Considerably Curtailed—Confidence in Future and Stabilization of Values are Primal Requisites in Readjustment of Great Canadian Industryat the Present Jnncture.

Anniversaries have their place in the scheme of things, and this edition marks another annual Statistical Number of the "Canada Lumberman." Anniversaries not only mark each passing milestone but cause observers to stop and take cognizance of conditions as they exist to-day, survey the future and indulge in reflections of the past. It has been stated by those, who give close attention to affairs, that nothing is ever gained by reverting to the days that are gone, but from the experience, insight and contact with the problems affecting any industry, its history and development, we may learn and profit much.

There is nothing like seizing the present and looking with assurance and confidence to the future. Man's mental attitude and vision has much to do with his physical well-being and attitude. If he is an optimist by nature, cheerful in disposition, buoyant in hope, elastic in step and agreeable in association, he will find pretty nearly all the rest of creation atune with his moods. In other words, we reap largely what we sow and get in return largely what we give. The individual, institution or industry that disseminates gloom, melancholia and pessimism, will never rise much above the source of these things and will possess a painful inability to gauge accurately conditions as they are. Prejudice and jeremiads should have no place in the scheme of things to-day when every factor should be brought into effect in order to restore business confidence, rehabilitate industry, stabilize production and normalize prices. The process of readjustment may be slow, but it is bound to work out alright in the end.

The Ups and Downs of Past Year

The year 1920 was in many respects a peculiar one in the lumber industry. It started off with a rush, in fact a speculative market. Nearly every lumber concern had increased its logging operations, and in many cases held tenaciously on to what stock it had in hand, knowing that fabulous prices could be obtained for it. The advances in many woods was phenomenal. It was as easy to sell any grade or width or available quantity of lumber as it was to breathe or partake of a tempting repast. If an industry, a contractor or private person required wood for any particular purpose, the main thing was to obtain a supply and let the price go hang. Not a few wholesalers would buy stock and by wire make a sale within the next hour at a profit of several dollars per M. Values knew no restriction; it was a runaway market. Everything continued to go ahead by leaps and bounds. This condition continued throughout the first six months of the year and then there was a gradual slowing up.

No one was heard to complain of prices. Manufacturers' costs were high, labor was exacting in its demand, transportation rates were increasing and more capital than ever was required for the lumber business. In some instances lumber shot up 100 per cent. to 150 per cent. more than the schedule of prices that prevailed in 1918. An artificial state of affairs was created, which the knowing ones realized could not last. The highest prices were paid for cuts of white pine, hemlock, spruce, birch, maple and other woods ever known in the history of the trade.

These facts are all well known to those engaged in the lumber line. It was a case of where money counted and no one cared to predict how high rates would aviate. It was realized that there must be a limit somewhere and that demand would slacken, but in the meantime little thought was given to what seemed only distantly problematical. During the strenuous months the members of the trade predicted now and then that "the peak" had been reached, but each time it was thought the quotation flag had been placed on the top-most pinnacle, it would be picked up by some ambitious or speculative individual and carried excelsior.

Midsummer Saw Slackening Up

Of course, much of the artificial and fictitious condition which existed was due to shortage in forest products. Every industry was booming, there was plenty of work, labor was insistent in its demands, the export situation appeared promising and little or no cloud loomed on the horizon. About the end of June, however, matters began to settle down. Those, who had been plunging and wild-catting and scalping in the lumber arena, seemed to become possessed of an idea that "the cream was off the milk," and it would do very well to go slow.

However, demand and turn-over did not cease in a day. Things moved along with fairly good results until the latter part of October when the 40 per cent. increase was added in the matter of freight rates. This proved to be the straw that broke the lumber camel's back for the said camel was already carrying all the load that it could bear, and as soon as from $3.00 to $6.00 and $8.00 per M was added on to lumber prices,—already regarded as too high,—buying ceased and a mark-time period ensued. It was only in January that some slight revival was shown. February also has resulted in a large number of inquiries, and it begins to look now as if 1921 would be a fair year in the lumber arena.

The 1921 log cut, as will be seen from the various reports from the different provinces and in interviews with representative lumbermen, has materially decreased. The export situation is uncertain, and while many predictions are made with respect to building undertakings, still it will not be definitely known for three or four weeks yet just how far many of the projects proposed will be undertaken. There is a disposition at this juncture to go slow and to use every effort to bring about conditions that will be stabilized, not only in the matter of prices but in so far as production and consumption are concerned. There is some indication that the recent drops in prices have stimulated buying, but just whether the bottom has been reached in the matter of quotations, remains to be seen.

The Long Range End of Lumbering

It would seem that there may be some slight decrease in wages in the mills and yards during the coming summer, but the cost of manufacture is still high for the simple reason that when any decreases go into effect in the way of provisions, labor, transportation, etc., it is a long time before the lumberman reaps any practical resultant benefit. He has to plan far ahead and look to many months into the future in the matter of getting out the timber, or in other words, between the inception and completion of his project, there is so long a period that a great deal may happen within that time.

Lumber is not an article of production of a few days or weeks. It is a matter of months—one might say years—and the sooner that those, who are talking about further readjustments in prices, realize some of the difficulties which the manufacturer is up against, the more it will help to clear the atmosphere. It will perhaps cause some of those constantly clamoring against the producers (as if they were the ones ever waxing wealthy at the expense of the retailer and the consumer) to pause and reflect that the lumber cycle is one in which all branches, manufacturing, wholesale, retail, consuming and distributing, are equally concerned. What affects one affects all, and in uncertain periods like the present, there is nothing like the spirit of co-operation and service and a little condescension and good-will and the evidence of "a long pull, a strong pull, and a pull altogether."

Production Costs and Logging Operations

Regarding production costs it will not be definitely known how this year's cut compares with that of last year until the mills get in operation. The general opinion is that in Ontario and Quebec production costs will be equally as high as 1921 as they were in 1920. It is also affirmed that current market prices on some woods are from ten to twenty per cent. below the basis of replacement costs. Stocks of dry lumber on hand are limited and, should a sudden abnormal demand develop, there would be an inevitable ascension in values. What representative manufacturers in various centres think of the market for 1921 will be found on another page of the "Canada Lumberman."

Speaking of operating conditions, one of the leading lumbermen of the North said: "Most firms got through hauling this year several weeks before the usual time. This has been brought about owing to the decreased cut and increased efficiency on the part of the men. There has been far less 'jumping' in the camps, and men have realized that they had to buckle down to hold their jobs.

"There have been many rumors in circulation about the alleged decrease in wages. Any reduction applied to only a comparatively few men engaged after Christmas. Those, who went in the bush early providing they worked faithfully, received the same rate of

wages right through the season, which ranged all the way from $65 to $80 per month.

"Now there are two things that are worthy of attention in connection with the skidding and driving of logs to the water's edge. Where the hauling has been high and dry, loggers have got along splendidly, as there has been very little snow to remove and the ice-roads have been good on the higher levels. On the other hand, where the drives have been over low land, along the bed of the river, over marshes and streams, log conveyance has been a costly business; in fact it has been very tedious owing to the exceptionally mild weather. In many cases teams would break through the ice and loads had to be considerably lighter than usual, so when it comes to sizing up the expense in logging operations, one may say that a great deal of what this year's logs are going to cost will depend upon location of the camp, the condition of the surrounding country, how far the timber had to be drawn, and the fall of snow. Generally speaking, however, the past winter has not been an unfavorable one for operations in the bush."

Decreased Cut and Probable Prices

One leading lumberman stated recently that it was difficult to size up conditions, but he predicted that in Northern Ontario the cut of white pine would be reduced 15 per cent. from last year, red pine 30 per cent., spruce 35 per cent., and hemlock 20 per cent. He also made the prophecy that white pine would hold its own in price as compared with the latter half of 1920, with the exception of mill culls and dead culls, which would be very low. Red pine would also show some decline in value as well as spruce, of which there was a considerable quantity in the market at the present time, especially in the East. Hemlock may go up or down two or three dollars from its present price. The great essential factor to increased activity in the market is confidence in the stability of prices and how soon that confidence will prevail is something which all would like to learn.

New Mechanics' Lien Act Drafted

Measure Affords Large Measure of Protection to Retail Lumbermen—Holding Owner Responsible

A new bill respecting liens of mechanics and wage-earners, supply men and others has been introduced in the Ontario Legislature by Mr. W. E. N. Sinclair, M.P.P., of Oshawa.

Some of the principal clauses in the proposed legislation, which are of direct interest to retail lumber dealers and others, are:—

(1) The original contractor shall, whenever any payment of money shall become due from the owner, part owner, or lessee or whenever he desires to draw any money from the owner, part owner or lessee under such contract, or upon the written demand of any mortgagee, make out and give to the owner, part owner, lessee or mortgagee, or his agent, a statement under oath, Form 1, showing the name of every mechanic or laborer in his employ who has not been paid in full and also showing the name of every sub-contractor in his employ, and of every person furnishing machinery or material, and giving the amount, if any, which is due or to become due to them, or any of them, for work done, or machinery or material furnished to him, which statement shall be accompanied by a certificate, Form 2, signed by every person furnishing machinery or material to him.

(2) The original contractor shall also deliver to such owner, part owner, lessee, or mortgagee, similar statement under oath from each sub-contractor, accompanied by like certificates from every person furnishing machinery or material to such sub-contractor.

Amount to be Retained

(3) The owner, part owner or lessee, or his agent, shall retain out of any money then due, or to become due to the principal contractor, an amount sufficient to pay all demands that are due or to become due to such sub-contractors, mechanics, laborers and material men, and shown by the contractor's and sub-contractors' statement and the certificates of material men for work done or machinery, material or fuel furnished, and shall pay said money to them according to their respective rights.

(4a) All payments so made shall, as between such owner, part owner, lessee, mortgagee, and such contractor, sub-contractors and persons performing labor or furnishing machinery, material or fuel, be considered the same as if paid to such original contractor, and such owner, part owner, lessee or mortgagee shall thereupon be released of any further liability to the extent of such payment so made.

The Right of Action

(4b) Until the statements provided for in this section are made and furnished in the manner and form as herein provided, the contractor shall have no right of action or lien against the owner, part owner, or lessee on account of such contract, and the sub-contractor shall have no right of action or lien against the owner, part owner, lessee or contractor, until he shall have furnished such statements, and any payments made by the owner, part owner, or lessee, before such statements are made, or without retaining sufficient money, if that amount be due, or it is to become due, to pay the sub-contractor, mechanics, laborers, or material men as shown by the said statements and certificates shall be considered illegal, and made in violation of the rights of the persons intended to be benefited by this Act, and the rights of such sub-contractors, laborers and material men to a lien, shall not be affected thereby.

(5) When the sixty days within which any liens can be filed, have expired, and no liens on account of such improvement exist, then the failure of the contractor to furnish such affidavit as herein provided shall not act as a bar or defence in any suit or cause of action to collect any claim or claims by law as other claims are collected.

(6) If neither such owner, part owner or lessee, nor his agent can be found within the county, then it shall not be necessary for the contractor or sub-contractor to make and deliver such statements and certificates as a prerequisite to a lien or to the institution of proceedings under this Act or other suit or proceedings.

Protection of Owners' Interest

(7) In order that the owner, part owner, lessee, mortgagee or contractor may be protected, he or his agent may at any time during the progress of the work demand in writing of the contractor or sub-contractor, any or all statements herein provided for, which shall be made by the contractor or sub-contractor, and given to the owner, part owner, lessee, mortgagee, contractor or his agent, and if such contractor or sub-contractor fails to furnish such statements within ten days after demand is made, he shall be liable to such owner, part owner, lessee, mortgagee or contractor, making such demand each time he so refuses or neglects to comply with such demand, in the sum of one hundred dollars and also for all actual damages occasioned by such neglect or refusal.

(5) The owner, part owner, or lessee who makes payments or distribution according to respective rights shall not be liable to the sub-contractor, material men or laborers for any greater amount than he contracted to pay the original contractor, but shall not be entitled to set off any damages which he may sustain by reason of any failure or omission in the performance of such contract; the risk of all payments made to the original contractor after the owner, part owner, lessee or his authorized agent shall have received the notice above mentioned, or before the contractor shall have furnished him with the statement under oath as hereinbefore provided, shall be upon the owner, part owner or lessee, until the expiration of sixty days within which claims for liens may be filed, as hereinafter provided, and no payments made to any contractor before the expiration of said sixty days shall defeat any lien, or any sub-contractor, material man or laborer, unless such payment has been distributed among the sub-contractors, material men or laborers, or if distributed in part only, then to the extent of such distribution; but where the original contractor shall have furnished the statements and certificates as herein provided, the owner, part owner, or lessee, may pay to such contractor out of the sum lawfully due and payable to him under his contract at the time said statements and certificates are furnished, any amount lawfully in excess of the claims and demands due from said original contractor to sub-contractors, material men and laborers, as shown on said statements and certificates, or as shown by notices served on such owner, part owner, or lessee, by sub-contractors, material men and laborers as provided herein.

(6) In making such payments, the owner, part owner or lessee may assume the names and amounts set forth in said certificates and statements to be true and correct and such owner shall not be liable for errors or omissions of said names and amounts in such statements and certificates, unless a notice has been served as herein provided.

New Brunswick Cut Sharply Declines

Estimates received by the Department of Lands and Mines in Fredericton, N.B., from scalers, indicate a cut of approximately 200,000,000 feet of lumber upon the crown lands of New Brunswick this year. Last year the cut on crown lands was approximately 360,000,000 feet and this shows a curtailment of nearly fifty per cent. Hon. C. W. Robinson, Minister of Lands and Mines for New Brunswick, estimates that the revenue from the Crown lands stumpage rates will be less than $1,000,000 this year as compared with $1,200,000 last year. The increased rate on stumpage became affective last August and the $5 a thousand rate is being paid on this winter's lumber operations on the Crown lands for the first time.

Great Increase in Value of B.C. Wood Products

Reached Enormous Sum of $92,000,000—Big Gain in Timber Revenue—Most Satisfactory Feature Was Heavy Overseas Shipment—Brighter Conditions

By George S. Perry, Vancouver, B. C.

Measured in monetary values, the forest production of the province of British Columbia for 1920, exceeded that of the previous year by over $22,000,000, according to figures submitted to the provincial legislature at Victoria by Hon. T. Dufferin Pattullo, Minister of Lands. Needless to say this large total also very much exceeds that of any other year in the records of the timber industry of British Columbia. The total, made up of values of record or estimated, for all sorts of products, including that of the wood-cutting industry, for the past four years is given by the Minister as follows.

1917	$48,399,469
1918	54,162,523
1919	70,285,094
1920	92,628,807

This is not revenue, but gross value of all timber taken from forest lands, and sold or disposed of. The figures of revenue returns received by the Provincial Government from stumpage, royalties, sales of timber and other dues on timber, show an equally healthy expansion. For the first time since forest records have been kept in British Columbia, the revenue realized by the government from this chief industry of the province, has exceeded three million dollars. True, the government a year ago placed in its estimates a probable revenue of over four million dollars from forest returns. That was perhaps rather an optimistic estimate. But that it was not so far out has been shown by the actual returns—making due allowance for the very abnormal conditions which disturbed the timber industry for most part of the year. For the past seven years revenue returns from forest products have netted the government anywhere from two million dollars per annum, upward, with the exception of 1915, when the returns fell slightly below that figure. The figures from 1914 onward, are summarized as follows:—

1914	$2,342,679.95
1915	1,922,558.40
1916	2,005,940.76
1917	2,338,333.52
1918	2,860,972.53
1919	2,875,809.98
1920	3,322,358.77

There is another phase of government activity in timber which indicates conditions fairly well, though not coming into the revenue column at the immediate moment. That is in the sales of timber from the public domain. In 1920, the total sales came within a few thousand dollars of trebling the record of 1919, and far exceeded the total of any preceding year for several years past. In 1920, sales of timber, including saw timber, poles, piles, posts and props, shingles, bolts, cordwood and railway ties covered values from which the computed revenue will be $1,799,039. In 1919 government sales reached a total of but $654,372; 1918, $380,408; 1917, $483,281; 1916, $259,769. The total acreage of timber lands involved in the 1920 sales was 121,690, which almost doubled that of 1919, when the acreage was 61,809.

An Increase in Timber Scaled

As the forest revenue of the provincial government largely comes direct from stumpage and royalty on timber cut, the figures officially supplied, covering the timber scaling in each section naturally show an expansion very closely in line with that of the monetary returns from timber. Rather contrary to expectations, and to what might have been reasonably predicted, the last three months of 1920 marked an increase in timber scaled, though there was a sharp decline in the lumber market in that period, which reflected back in a general slowing up of production and that in turn had the effect of checking operations in the woods—to such an extent in fact, that every logging camp on the coast, with scarcely an exception, closed before Christmas, while many of them were down two months prior to the end of the year. The mills in the Mountain, or Interior districts, were closed down early, and the logging operations, usually most active in the winter season in that part of the province, were much curtailed.

From the official records the forest operations, as shown by the official log scale for the year 1920, resulted in a cut of 2,146,233,527 feet. The 1919 cut was 1,758,329,995, and the 1918 returns show a cut of 1,761,184,406 feet. The record for 1920 is far above any previous year in the B. C. lumber industry. The division of this total between Coast and Interior, as it is made by the Forest Branch, would give approximately 1,706,064,727 feet as the total cut on the Coast and 440,167,908 feet as the total for the Interior.

It may be noted in passing that the Interior as figured by the department includes the northern interior as well as the southern portions usually referred to as the "Mountain" district. The reason the latter term is restricted to the southern interior is that the Mountain Lumber Manufacturers' Association covers the southern interior and does not include the northern interior, which has quite recently joined with the northern coast district in forming a timbermen's association of its own.

In looking over the above totals, in comparison with any figures which may be made as to lumber sawn, it is well to make note of the fact that the official log scale, from which the above figures are compiled, includes all classes of timber, such as poles, piling, shingle bolts, ties, timber cut for pulpwood, and all other timber products.

Regarding the return of lumber cut in the province in the past year, figures covering the entire output are not accessible. The Mountain Association, covering the mills of the Kootenay, Okanagan, Nicola, and the Columbia valleys, has issued a summary showing production, 324,000,000 feet; shipments, 247,000,000; stocks at end of year, 247,000,000 feet. The latter item corresponds very closely with the total at the end of 1919. The total cut in the Coast and Vancouver Island district will very closely approximate that of the previous year, while the figures for the northern coast and interior are difficult to estimate. The stocks of lumber on hand at the close of the year—and which will not show any very material change yet—will be quite as large as at the end of 1919, when the total reported in the Coast and Vancouver Island district was 152,320,000 feet.

Export Shipments Broke All Records

Possibly the most satisfactory feature of the 1920 lumber trade is that recorded in export shipments. Many of the coast mills were engaged very steadily all year cutting on orders for overseas deliveries. That trade reached a total far in excess of any former season, and nearly 40,000,000 feet greater than 1919. The figures for the waterborne shipments of lumber from British Columbia mills, as given by the Pacific Lumber Inspection Bureau, whose inspectors check every shipment, are given below, in comparison with 1919:

Overseas Shipments

	1919	1920
Australia	8,515,600	32,218,155
New Zealand	.....	4,159,099
South America	1,551,574	5,523,102
China	17,183,430	14,911,232
Japan	4,675,730	5,990,266
U. K. and Continent	65,384,100	61,217,805
South Africa	5,044,672	7,330,531
India	.....	5,385,268
United States	5,259,346	4,162,845
Philippine Islands	785,726	2,996,123
Straits Settlements	475,088	234,479
Mexico	.....	1,015,414
Cuba and West Indies	.....	1,479,950
	108,872,266	146,624,269

It will be noted from scanning these figures that there was a slight decrease in shipments to the United Kingdom and Europe. There was also a decrease in shipments to China. The big increases were in the exports to the British Dominions, Australia, New Zealand and South Africa and to India. Smaller figures show gains in shipments to Mexico, Cuba and West Indies. It is to be noted also that several export customers had not received any lumber from British Columbia in 1919. India is in fact in the guise of a new customer.

There is a future as yet unrealized by the man in the street in British Columbia, in the development of the pulp and paper industry. In addition to the several mills which have been established and producing for some years now, there have been a number of announcements of companies formed to exploit pulpwood areas in widely separated sections of the province. At least three of these are likely to become active in the present year. That the world markets are

wide open for pulp and paper products and that there is an unlimited supply of wood suitable for pulp-making in the Pacific provinces, are the two dominating facts which are leading pulp men and financiers to look into the opening that exists. Since the first pulp mill was built on the Canadian Pacific Coast, there have been many changes in the situation.

Expansion in Pulp and Paper Line

The first mill had a long and uphill struggle, and the first men to enter the field have been left behind in the opening up of the pulp industry. The large plants now established are owned and controlled very largely by the same interests which own and control the pulp and paper industry in the Pacific Coast states. The expansion of the market year by year can be gauged by the totals for the past two years, taken from official sources. These show production as follows:—

Pulp	1919	1920
Sulphite	80,047 tons	92,299 tons
Sulphate	9,473 tons	16,380 tons
Ground Wood	99,769 tons	108,665 tons
Total	189,289 tons	217,344 tons
Paper	1919	1920
Newsprint	123,607 tons	136,832 tons
Wrapping	7,202 tons	9,792 tons
Total	130,809 tons	146,624 tons

All of the ground wood pulp, 38,886 tons of sulphite and 7,450 tons of sulphate were manufactured into paper within the province.

The foregoing review of the leading features of the timber industry in British Columbia for the year 1920, giving in many cases the merest outline of the course of activity in various branches of the business, is remarkable in that it shows an unbroken front of expansion in the face of many adverse and some very trying situations. The most unsettling happening in lumber circles in the year must unhesitatingly be pointed out as the premium prices paid for lumber in the early months of the year.

There was an unexpected and unusual demand from the United States market—so insistent that buyers from leading centres across the line not only visited British Columbia but stayed right on the ground for weeks at a time, and their anxiety to get lumber orders firmly accepted was so evident that it impressed the entire trade. The impression was heightened by the prices offered and paid—for there is no question that the lumber shipped to the U. S. market in the first three months of 1920 went in every instance at a very high price. Shingle shipments shared in the general advance, and this runaway market created a momentary boom in lumber-selling circles. There were few, if any, who did not succumb to the temptations of that speculative condition.

The Inevitable Reaction Came Suddenly

That the reaction was bound to come was inevitable. It came quickly, and it came with a reverse force quite as strong as that which had caused the upheaval of prices. The high prices had affected the regular trade with all parts of Canada and of the U. S., where regular customers had to pay the premium figures or go without the lumber which speculators were bidding for. On the rebound, the falling prices upset the regular trade with equal force. The trade did not know when the bottom of the market would be reached, and so it waited. To add to the dullness which followed the reaction, the lumber industry entered the period of general slow trade, which it is sharing in common with other industries, in an unprepared condition. The winter months are usually the slack season in the lumber line in British Columbia. The winter of 1920-21 has been unusually slow, and it followed a fall trade which had never been so low for years. Prices which were battered down to a point below where there was any profit, have not yet shown any indication of an advance, and at the moment do not seem likely to.

Into the midst of the lumber trade, already disrupted as above described, there was projected in September of last year the now famous freight tariff increase of 35-40 per cent. What it did to British Columbia's lumber trade with Eastern Canada is well known to the eastern readers of "Canada Lumberman." That is a subject which has yet to be threshed out by all trade interests in Canada. Possibly the lumber manufacturers of British Columbia think their grievance in the matter of freight rates is greater than that of other enterprises in manufacturing and commerce. There is no division of opinion in the trade in B. C. as to the unwise policy of such a sweeping increase in freight rates. The direct result has been to kill off the greater part of the prospective trade with Eastern Canada, and equally so with the middle and eastern states. In both those fields, Southern pine has the master hand, and is now reaping the immense advantages of short haul and comparatively slight increase in freight rates. The long haul from the coast is only possible now on certain specifications, notably squares and long dimensions, of the class only to be obtained in British Columbia.

Active Year in Quebec Lumber and Pulpwood

Amount of Timber Cut on Private Lands Now Almost Equals That Taken Off Crown Domain—Great Improvement in Operations—Good Use of Seaplanes

G. C. Piche, Quebec, P. Q.

Mr. G. C. Piche, Chief of the Forest Branch of the Quebec Provincial Department of Lands and Forests, in a special report to Hon. Mr. Mercier, Minister of Lands and Forests, gives an interesting general survey of the Quebec forest service, of which the following is a summary:—

In general, owing to the excellent prices paid last winter for lumber and pulpwood, there was great activity in our forests, and this, notwithstanding the heavy increases in the salaries of the men and the prices of supplies and forage. There was a remarkable increase in the volume of the timber cut during the season 1919-20 in the province.

We must mention the fact that the cut of timber on private lands is now almost as great as that on Crown lands. In the first case, the department does not get any revenue, but has to spend every year more than $100,000 to have the regulations observed on settlers' lots, and especially to prevent timber thieves to clear up the lots at the prejudice of the good settlers.

The legend that the lumbermen have ruined the lots, before they were sold to settlers received a death blow from the following facts: during the year 1919, there were 985,961,335 ft. B.M. cut on the private lands, whereas all the cut on the lands under license amounted to 1,055,358,173 ft. B. M.

Following the drop in the selling prices of lumber which has started to manifest itself in August, 1920, in Canada, as well as in the United States and Europe, the lumbermen have decided to reduce their present operations by about one-third. Fortunately, there was until the end of 1920 a greater demand for pulpwood but, since the beginning of the present year, the pulpwood operators have also diminished their cuttings and many camps have been shut down. Therefore, the volume of the cut of 1920-21 will be about equal to that of last season. On the other hand, the prices paid for pulpwood cut on private lands has reached such a height during the autumn that we must expect there will be great abuses made on private lands, and many timber owners will strip their lands of its spruce without any care for the future. It means that our control will have to be more vigilant.

The revenue for the fiscal year ending June 30th, 1921, will certainly reach the three million and half dollars' mark, whereas, those of the following year will be higher by, at least, one million dollars, owing to the increase of the stumpage dues decided last summer by the government. This advance will take effect for all timber cut after the first of September, 1920.

We must mention a great improvement which is taking place this winter in the lumbering operations: the companies are giving much closer attention in following the departmental regulations, and employ a larger number of men to inspect their logging operations. These inspectors co-operate with our own staff of engineers and rang-

ers, and the results obtained thereby are noticeable. Furthermore, the radical measures taken by the government in charging severe fines for the infractions to the Lands and Forests regulations have certainly helped to get this improvement.

The numerous studies made by the Forest-engineers to decide if it was needed, in certain sections, to make exception to the cutting regulations have allowed us to know better the forest conditions of the stands which were to be lumbered, and to authorize without exposing ourselves to compromise the future of the forest.

Better Regulations in Logging

We are thus coming rapidly towards a better regulation of the lumbering operations, as we must aim that the logging operations will improve rather than impoverish the cutover areas.

In other words, we wish to arrive, in the shortest delay possible, to determine in advance what will be the maximum volume of the cut which we can allow to be made per square mile on a given area, so that we will not allow to be removed, every year, more timber than the forest really produces.

The inspection of the settlers' lots still gives us a considerable amount of work, as we are compelled to study, every year, at least 25,000 cases of cutting operations made upon private lands, and we must collect the stumpage dues imposed either as a guarantee of good faith or, as a fine, if abuses have been made. Last year, we have thus collected $15,651.00 in fines and $99,235 in guarantee; besides these amounts, after examination of the improvements made on the lots, we have abandoned claims of the timber cut during the process of clearing which would have amounted to $177,000. This policy gives excellent results, as the owners of the location tickets, in order to get their money back, are compelled to make the improvements which many of them otherwise would have been tempted to neglect.

We have encouraged the exploitation of maple orchards on the Crown lands, and we expect that this section will take fairly good extent in the near future.

On the townships forest reserves, the permit holders cut last winter 2,603,350 ft. B.M. which have given us a revenue of $4,600.82.

The classification of the domain has been followed as quickly as our personal could allow. Fifteen townships have been classified in full, as well as one or several ranges in eighteen other townships. The whole represents a total of 6,300 lots classified.

Wider Recognition of Reforestation

The Berthierville nursery continues to give excellent results and the demands for forest trees are always numerous, and we will be compelled to enlarge the nursery by purchasing one or two adjoining properties, as we certainly lack space. We are convinced that reforestation is going to be more and more recognized as a necessity for the establishment of a permanent supply of timber and this more so, now that the problem of fire protection is being dealt with greater attention.

During the year 1920, the forest fires have devastated an area of about 290,000 acres. We must congratulate ourselves that the damages were not more considerable, because the temperature, during the months of May, June and July, was very unfavorable. We must not forget that quite a number of these fires have gone over lands which had been lumbered or burned recently, so that the immediate damages are not as extensive as if all the lots had been fully wooded. Nevertheless, we must not neglect a single acre of forest land, and take all the means to prevent and combat this plague and also see to repair efficiently the damages within the shortest delay possible.

The use of seaplanes in the region of Lake St. John has given very good results and we may hope, thanks to this additional weapon, to exercise a more active patrol upon the remote Crown lands so as to discover the fires at their very origin, and, in case of need, transport the necessary men, right close to the fires. The hydroplanes will also render us great services during the reconnaissances to be made of the unexplored territory of the province, where the means of transportation lack entirely.

Plans are progressing rapidly for the 29th annual meeting of the National Wholesale Lumber Dealers' Association to be held at the Drake Hotel, Chicago, Tuesday and Wednesday, March 29th and 30th. Secretary W. W. Schupner states that the response from members indicates that the selection of Chicago as the convention city was wise and that reports show that a representative attendance from all sections of the country.

Readjustment Proceeds Slowly on Prairies

As Soon as Conditions are Settled and Price of Commodities Stabilized Building Will be Resumed on Large Scale—General Outlook is Fair

It is always interesting to study the attitude of the West and, with each recurring spring, the mind of many in the East turns instinctively to the opportunities and potentialities of trade in the Prairie provinces. The purchasing power of the people of the plains means much to manufacturing and supply concerns in both the eastern portions and the extreme west of the Dominion. The marketing of a large or limited supply of commodities applies not only to the ordinary requirements of life but to a great degree in constructional undertakings. Will there be much building in Manitoba, Saskatchewan and Alberta? How will the demand for lumber and other structural requisites shape up? It is a little too early yet to make any definite predictions, but the following review of conditions presented by the Winnipeg correspondent of the "Canada Lumberman" will be read with interest and appreciation. He says that there has been little change in the lumber business at prairie points during the past two months. The demand is still light, and although retailers have every confidence in the future, the present situation is one which might truly be called stagnant. It was, however, surprising and gratifying to note the cheerful spirit pervading the big representative gathering of lumbermen at the recent Winnipeg convention. Nobody was downcast, and the optimistic Western spirit was never seen to better advantage than in the words and actions of the prairie lumbermen at the event referred to above.

The general outlook is problematical and the consumer of lumber is no doubt putting off his purchases until the last moment in keeping with the accepted principle that it is poor policy to buy on a falling market. Naturally, it will take some time for anything like a normal demand to again prevail.

Retailers are anxiously waiting the result of widespread campaigns urging the public to "build now" and to "buy now." It does not seem probable that the public will be greatly affected by these exhortions until they are satisfied that prices of all building materials have reached "rock bottom."

In the larger centres of population there is no doubt that a good deal of lumber will be in demand as soon as weather conditions permit of outside work, but from reports in the rural districts there is no certain evidence of activity in the erection of buildings. Speaking generally, in the good-crop districts, business is expected to be 65 per cent. to 70 per cent. normal, from present indications. In the mixed farming and oat-growing territory business of every nature is poor and prospects are too uncertain at this time to forecast the future.

Price Recessions to Stimulate Trade

In the past two or three weeks retailers have made further reductions in price in the hope of stimulating trade. There seems to be good reason to believe that any further reductions are impossible, and the consumer certainly cannot accuse lumbermen of profiteering to-day. Lumber prices are from 25 per cent. to 40 per cent. below the peak, and it remains for the other trades to "get in line" and give an inducement to the prospective house-builder to lay out his money to good advantage. Without going over old ground, it is worth while to point out once more that the cost of lumber in an average house is from 30 per cent. to 35 per cent. of the whole, and the person who postpones building on account of the cost of lumber has in reality a poor argument, for the truth is that the other items entering into a building not only represent a much larger proportion of the whole, but also have, up to the present, shown little tendency to come down in price compared with lumber.

Reports indicate that practically all yards are carrying abnormally low stocks. This would seem to be a natural result of the light demand, the advice of many manufacturers to buy for immediate requirements, and the weakening of prices in the past months. A good deal has been said and printed about the danger of the retailer reducing stocks to wait for business to improve before replenishing his piles very heavily. As to the chances of a sudden revival of business and its effect on the low condition of yard stock, the men interested are content to take a chance on getting what they want when the demand makes itself felt.

There is much room for improvements in collections. It is hard to get money, and persistent hammering is the only recourse for the country retailer. It has been widely circulated that "the farmer will not sell his grain" and no doubt there is a considerable percentage of farmer debtors who are deliberately evading their responsibilities in this way, but we believe the vast majority of these gentry could, if they would, meet at least a part of their obligations. It does not seem hardly fair to the merchant, who granted credit in good faith a year ago, to ask him to wait for a settlement until wheat passes the two-dollar mark. However, head offices in Winnipeg report collections "slightly improved," "better in the last 30 days," and so on.

None but the very best of risks, and few of those, are being considered by lumbermen to-day. As a matter of fact, few of the farming population are asking for further credits, and the general wave of economy, close buying and careful spending has had its effect on all classes of the community. Expenses on the farm last summer were high and returns certainly not up to expectations, so that it is to be expected that an all-round tightening up of credits and a pushing for collections will be the general rule.

Referring once more to the outlook for building in 1921, we believe it is yet early for anything but a guess at the future. Conditions are not by any means settled, but if they were, and if one could say that prices of commodities were stabilized, we believe the first signs of activity and resumption of normal life would appear in the erection of homes for the many thousands who are but waiting for a chance to "Own Their Own."

Speaking of the future, a leading wholesale lumberman of Winnipeg recently remarked: "I am of the opinion that during the next five years in Western Canada, we will experience an activity in the lumber business not heretofore equalled."

How Uncle Sam's Timber Supply is Going

In response to a resolution of the United States Senate, the Forest Service has restudied the forest situation of the country. It was found that recent high prices of lumber, newsprint, turpentine, and other forest products have seriously affected many industries and in various ways have imposed formidable burdens on the public.

House building has been checked, farm development and upkeep hampered, and the cost of furniture, vehicles, tool handles, agricultural implements, and other articles heavily increased. Lumber prices have risen out of proportion to increased costs of production and distribution. The pulpwood and paper industry is in straits for raw material from the forests .

Depletion of the timber supplies in the eastern part of the United States has reached the point at which eastern and even southern markets are being invaded by west coast lumber, hitherto barred by the high cost of transportation. The timber of the country as a whole is being used and destroyed four times as fast as new timber is growing, and the saw timber, the most valuable and most needed part of the stand, is being cut five and one-half times as fast as it is produced. More than 80,000,000 acres of land that should be growing timber is unproductive waste, much more is only partially productive, and fires are steadily causing further deterioration.

The new study of the situation made by the Forest Service contains many facts never before brought out, regarding both individual industries and conditions in individual states and regions. It discusses also the relation between forest depletion and the lumber prices, depletion and exports, and concentration in timber ownership, manufacture, and marketing. Fresh light is thrown on the question of timber monopoly.

Finally a programme is outlined for bringing about a fundamental and permanent change in the situation. Timber in large quantities will always be an economic necessity and we must prepare to grow it, says a leading Washington authority.

National Wholesalers Will Meet in Chicago

The annual convention of the National Wholesale Lumber Dealers' Association will be held at the New Drake Hotel, Chicago, March 29th and 30th. It is expected there will be a large and representative attendance and a number will be present from Canada. During the week of the convention there will be several other important lumber gatherings in Chicago, including the Third American Lumber Congress on March 31st, and conferences of lumber manufacturers, wholesalers and retailers from all over the United States will be going on at the same time. W. W. Schupner, secretary of the National Wholesale Lumber Dealers' Association, points out that the twenty-ninth annual meeting of the association offers an unusual opportunity for the discussion of timely subjects by prominent men in the lumber business. It looks as if the number of delegates will beat all records.

Statistical Survey of the Great Lumber Industry of Canada

The Dominion Bureau of Statistics, Ottawa, has just completed a report on the Lumber Industry in Canada for the calendar year 1919, covering the operations of 3,410 plants, located by provinces as follows:

Alberta	34	Quebec	1,419
New Brunswick	249	Yukon	1
Prince Edward Island	63	Manitoba	38
British Columbia	258	Ontario	852
Novia Scotia	486	Saskatchewan	10

Capital Investment

The amount of capital invested in the industry is presented in the accompanying table by items for each province and the Dominion:

Provinces	Land, buildings, machinery, tools and other equipment. In Logging & & Timber camps.	In Saw Mills	Materials on hand, stocks in process, finished products, etc.	Cash, trading & operating accts. & bills receivable	Total Capital
Alberta	$ 98,682	$ 281,175	$ 182,903	$ 86,304	$ 649,064
British Columbia	18,951,933	17,873,015	9,696,305	12,819,787	59,341,040
Manitoba	538,982	742,604	688,314	888,394	2,858,294
New Brunswick	6,382,025	7,934,688	10,854,331	6,645,081	31,816,125
Nova Scotia	2,099,708	1,626,334	1,870,607	775,472	6,372,121
Ontario	8,114,416	11,208,994	22,907,291	16,969,185	59,199,886
Prince Edward Island	16,000	111,500	20,910	20,462	168,872
Quebec	8,402,134	24,674,746	20,227,147	15,973,767	69,277,794
Saskatchewan	94,509	144,608	378,228	876,408	1,493,753
Yukon		3,882	18,998	3,418	26,298
Canada—Totals	44,698,389	64,601,546	66,845,034	55,058,278	231,203,247

Employees, Salaries and Wages

The number of persons employed in the industry by sex and classes of employment together with the amounts paid to each class in salaries and wages is shown in the following table:

Classes of Employment	No. of Employees Male	Female	Salaries & Wages
Officers, superintendents, managers	2,606	53	4,449,852
Clerks, stenographers and other salaried employees	2,085	316	2,526,980
Wage earners in the woods	34,359		25,505,355
Wage earners in the mills	34,061		28,516,833
Totals	73,111	369	$60,999,020

Misccellaneous Expenses

The total cost of all miscellaneous items of expense connected with the industry for the calendar year 1919 was $31,280,905. The various items of expense are detailed below.

Rent of mill, factory or works	$ 376,775
Rent of power	357,992
Insurance premiums	2,183,844
Taxes, (municipal, provincial, federal)	1,980,690
Supplies for board of men and keep of horses	7,724,468
Rent of offices and buildings, not included above, and miscellaneous expenses	10,801,654
Contract work (not included before)	7,855,482

Raw and Partly Manufactured Materials

The quantity and the cost value of all materials including freight, duty, and other charges is shown by principal items for each of the provinces and the Dominion in the following table:

Provinces	Logs for Lumber Quan.	Logs for Lumber Value	Bolts for Shingles Value	Rough Lumber Purchased as such Value	Rough Lumber Purchased as such Quan.	Rough Lumber Purchased as such Val. only	All other material
	M. ft. B.M.	$	Cords	$	M. ft.	$	$
Alberta	24,856	361,536	70	700			
British Columbia	1,432,068	17,472,316	171,460	2,061,234	22,957	585,814	870,626
Manitoba	18,844	406,087	298	2,998	85	2,515	3,500
New Brunswick	573,892	10,473,706	5,114	70,153	2,923	44,747	55,587
Nova Scotia	212,012	2,930,055	12,674	81,413	2,254	37,705	86,429
Ontario	983,217	16,180,382	33,740	329,747	12,739	419,733	618,701
Prince Edward Island	16,046	91,385	125	970	435	5,950	5,220
Quebec	835,410	16,285,248	108,735	933,728	41,584	948,124	685,078
Saskatchewan	30,385	597,105			38	1,013	3,300
Yukon	253	2,532					
Canada Totals	4,126,983	64,800,352	332,216	3,480,943	83,015	2,081,601	2,328,411

Forestry Statistics by Provinces

Statistics of all forest products comprising mill and woods production are presented in the following summary table:

Provinces	Establishments	Capital	Employees, Sal. & Wages No.	Wages Payments	Cost of materials.	Value of Products
Canada	3,410	231,203,247	73,480	60,999,020	72,691,337	222,648,790
Alberta	34	649,064	438	454,732	362,236	1,393,183
British Columbia	258	59,341,040	17,462	20,268,591	20,989,990	60,440,773
Manitoba	38	2,858,294	866	516,560	415,100	1,497,486
New Brunswick	249	31,816,125	8,624	5,520,163	10,644,195	26,713,403
Nova Scotia	486	6,372,121	3,422	1,389,024	3,135,602	8,331,824
Ontario	852	59,199,886	23,154	18,717,426	17,548,563	60,565,554
P. E. Island	63	168,872	87	37,234	103,525	286,121
Quebec	1,419	69,277,794	18,678	13,362,368	18,888,178	61,493,919

Yukon	1	26,298	3	5,405	2,532	12,680

The Kinds of Lumber Sawn

The production of sawn lumber, shingles and lath by quantity and value of cut for each species of wood is shown in the accompanying table for the Dominion:

Kinds of Wood	Sawn Lumber Quantity M. ft. B.M.	Selling Value at Mill
Softwoods—		
Spruce	1,335,044	43,941,766
Douglas Fir	817,844	22,407,922
White pine	479,937	19,872,271
Hemlock	234,785	6,899,719
Balsam Fir	140,834	4,310,152
Cedar	98,808	3,148,810
Red pine	89,198	3,404,029
Jack pine	45,016	1,359,245
Western yellow (Bull pine)	37,776	1,081,287
Tamarack	16,490	438,333
Larch	15,763	400,995
Yellow Cypress	10	400
Other kinds, not spec.	14,883	434,817
Custom sawn lumber	308,377	7,468,937
Hardwoods—		
Birch	69,077	2,671,508
Maple	44,755	1,626,368
Basswood	25,247	945,002
Elm	15,709	564,690
Poplar	13,584	435,165
Beech	10,581	388,236
Ash	7,035	245,162
Cherry	3,714	123,802
Oak	2,829	133,591
Chestnut	901	25,848
Butternut	374	13,592
All other, not spec.	2,260	68,101
Total, all woods	3,830,831	$122,359,748
All other sawmill products		6,681,940
Total value		$129,041,688

Shingles and Lath Production

	Shingles Quantity	Shingles value	Lath Quantity	Lath value
Cedar	2,780,645	12,932,387	49,321	246,962
Spruce	46,623	183,297	219,842	948,017
White pine	42,966	207,048	111,942	466,287
Hemlock	10,430	51,199	16,687	59,122
Balsam fir	13,956	48,916	19,380	53,901
Jack pine	2,303	12,261	13,966	55,796
Poplar	844	3,647	39	157
Douglas fir	311	1,729	19,703	85,360
Other kinds	17,071	83,861	69,323	242,156
Totals	2,915,149	13,534,345	520,203	2,157,758

Forest Production

The following table shows the production of logs, timber, pulp wood, etc., arising from operations in the woods during the calendar year 1919, by quantities and values:

Kind	Unit of Measure	Quantity	Value
Logs cut in year	M ft.	3,026,928	$56,922,748
Timber squared	M. ft.	29,789	614,641
Pulpwood	Cords	1,029,879	14,085,370
Shingle and stave bolts	Cords	112,742	1,331,450
Poles, all kinds	No.	201,212	167,797
Ties, hewn	No.	5,173,818	3,587,135
Posts	No.	1,663,358	220,041
Piling			69,591
Firewood	Cords	70,304	322,878
All other products			603,348
Total value			$77,924,999

Many Ships are Awaiting Lumber Cargoes

Out of This Condition It Should be Possible to Develop Combination That Will Benefit All Parties—Labor Unions are Obstacles to Readjustment

By Elihu Woodworth, Parrsboro, N. S.

Readjustment, even in small matters and in a limited field, is likely to present some difficult problems. It is much easier to continue in a rut than to quit it abruptly, and the deeper the rut has become the more difficult it is to adopt a new course. The world to-day is confronted with the biggest readjustment job in its history. Much work in this line has been done in other years, for the course of civilization has been deranged many times, but there has never been anything to equal the present situation. Great wars and long wars have been waged in other times with disastrous effects in some portions of the world, but the effects of the "world's war" have been felt with varying degrees of intensity in every part of the globe. One of the curious things in connection with readjustment is that it has been so long delayed. The armistice was signed two and a half years ago and the treaty of Versailles followed within a year. In many cases a return to conditions approaching the normal might reasonably have been expected to follow at an early date but all expectations of that kind were doomed to disappointment.

The fact is that many people who had got into war time ruts had no desire to get out of them. Sticking to the ruts meant for them the line of the least resistance—and the most profits. It was different when prices were going up. The man who had anything to sell, no matter what, had no hesitation in accepting large and sudden advances in price, but when the tide turned he was, as a rule, very reluctant to take less than he had been getting. Consequently the close of the war failed to make an end of the high cost of living. The abnormally high war-time prices showed no indication of declining with the advent of peace. On the contrary, the prices of many indispensable commodities, such as flour, sugar, meats, eggs, and butter continued to advance steadily, and the price of labor soared accordingly. Indeed the demands of labor were usually more than in accord with the advance in the cost of living, and, when granted, furnished plausible excuse for a further advance in other prices. Slight reductions in the price of various articles were occasionally reported from the larger centres of population, but dwellers in small towns and in the country as a general rule experienced little or no relief from the H.C.L. until the beginning of the present year.

War-time conditions and conditions since the war have had, in Nova Scotia, marked effect upon the ship-building industry, and have left an unsolved problem for the owners of shipping property. The war undoubtedly was responsible for the revival of the wooden shipbuilding industry in many places. Post war conditions have given this industry its death blow in most places. Wooden vessels in limited numbers and under certain conditions will continue to be built, but in the greater number of the shipyards lately in operation the business is dead beyond the hope of revival of resurrection. At present only one shipyard is open on the shores of Minas Basin, or for that matter in the whole of Northern and Eastern Nova Scotia. So far as is known at present, that solitary yard will be closed as soon as the sea-going tug now under construction is successfully launched.

Money Put in Vessels Only Fair Investment

An authority on Parrsboro shipping writes: "Parrsboro has twenty-six three and four masted schooners on her registry books, all built since the war and of a total value of one million eight hundred thousand dollars. Nineteen of these are owned in Parrsboro and vicinity and represent a value of one million two-hundred thousand dollars." He says that "the closing of the yards was due to the slacking off of freights and the high cost of construction and operating, but after business readjusts itself and gets down to a solid basis it is expected some of the yards will open up again to build a smaller class of vessels for the coasting trade." Further on he says: "Parrsboro shipping men are in a good position to stand a few hard knocks, and I think I am safe in saying that fifty thousand dollars would cover the liabilities of her fleet of nineteen vessels with assets of over a million dollars. In this way they have a great advantage over the vessel men who went into the business and borrowed the money, expecting to pay it back out of their profits. Besides a number of our vessels have been off a couple of years and paid back their owners in some cases forty and fifty per cent."

Part of the above quotation is misleading. The new vessels of the Parrsboro fleet do not represent the value therein stated. No doubt they cost the amount mentioned, but unfortunately in this case cost and value are not synonymous terms. The vessels cost too much and the value is not in them. If the vessels in question had to be sold, it is extremely doubtful whether fifty per cent. of what they cost could be realized. No doubt the Parrsboro ship owners, considering the relatively small amount of their liabilities, will have a great advantage over the vessel men who went into the business and borrowed the money, but with some of their vessels laid up abroad and others on their way home to lay up, the money put into them can scarcely be regarded as a gilt-edged investment.

Cost of Operating is Too Heavy

When building deal-carriers during the war it became the custom in most yards to make each new vessel larger than the one that immediately preceded it. The reason for this was obvious. A vessel of say six-hundred tons register, would carry more than double the quantity of lumber that would be carried by a vessel of half her tonnage, while the cost of operating the vessel would be but a trifle more than the cost of running one of half the size. There would also be a saving in the proportionate cost of construction in favor of the larger craft. But when profitable deal freights could no longer be obtained, the big schooners became unprofitable. They were far too large for the coasting trade, and it became practically impossible to get paying off-shore freights for them. No doubt the time will soon come when they will be able to get employment that will be moderately profitable, but to make that possible the cost of operating will have to be reduced. Seamen's wages will have to come down. They kept up long after freights had fallen, and last summer and fall they maintained the elevation they reached when U-boats infested the seas. It is improbable that seamen's wages will ever drop as low as they were twenty or thirty years ago, but when things are finally readjusted and brought down to a live and let live basis, there will be a marked decline in the prices that were current last summer.

Securing a Winner for Fishermen's Race

Until it ceases to be profitable for men to go down to the sea in schooners to catch codfish or any other fish, there will always be some shipbuilding on the south-western coast of Nova Scotia. Some renewals have to be made yearly in the splendid fleet of fishing vessels owned along these shores, for in their arduous employment the vessels must be kept up to a high standard. In their strenuous occupation some of their staunchest are practically sure to come to grief every season and it is fairly certain that the fishing fleet will require new vessels every year. At present there is an added inducement to have a new craft built, for there is always the hope of securing a winner for the Fishermen's Race. In any case the vessels that are thought to be no longer fit for fishing are still in excellent condition for other service, for instance, in the coasting trade. There is no doubt that a few vessels suitable for the coasting trade are needed at this port and along this shore, but it is not very probable that any of our shipyards will open up to build them. Discarded vessels of the fishing fleet make good coasters and can usually be bought for a small part of the money it would cost to open or re-open a shipyard and build a vessel of the same tonnage, even after things have got "down to a solid basis." Even in coasting the cost of the vessel makes a difference. Time was when it seemed to matter very little, so long as you had the vessel. This winter lumber has come to New York from the Pacific Coast at a lower freight rate than was paid Parrsboro coasters a year or two ago on lumber cargoes from Parrsboro to New York. In the face of competition like that the coaster cannot afford to pay fancy prices.

Large Lot of Vessels Left on Hand

The cut of lumber in this vicinity, this season, will be the smallest for many years. It is difficult to estimate how much the output will decline, for some of the smaller operators will probably cut as much as they ever did, but others, including many of the largest operators, will cut less than half of their usual output. However, if the hoped for demand for lumber materializes, there will be an abundant stock on hand for shipment, for considerable quantities have been left over

every year for several seasons. This includes the greater part of a large lot of deals purchased by the French Government some time before the close of the war. Probably in due time when the Government "gets good and ready," steamers will be sent for this lot, but the other left-overs added to this season's cut, will make many cargoes for the Parrsboro schooners. In other parts of the province conditions are much the same as here and the output of deals and other long lumber will be much curtailed. In some sections a big business is done in pulpwood, and these places are little affected by the state of the general lumber market, for there is always a demand for pulp. The big pulp mills have insatiable appetites, and it is quite possible that the lack of a market for other lumber may cause an exceptionally large output of pulpwood.

Another variety of lumber for which there is always a demand and always will be so long as coal continues to be mined, is known as "pit timber." These props, on which mining operations depend, must not be less than five inches in diameter, of certain stated lengths and probably of spruce, although some other kinds of wood will be accepted. Vast numbers of these props are used every year, and the prices must be fairly remunerative or the demand will not be supplied. The market for pit props is usually a local market, that is the demand can usually be supplied from near the mine requiring the timber. But after a few years, even the mines surrounded by forests have to go farther afield. This winter many cars of pit timber are being shipped from Parrsboro to Springhill Mines, twenty-eight miles distant. The shipments from Parrsboro are only a small part of the number required by the mines at Springhill, to say nothing of the other mines in this country or in the province, but the demand for pit timber is undoubtedly growing and will continue to grow. The mines must have the timber and must pay enough for it to make procurring of it fairly remunerative. A few years ago all the props required could be got very near the mouth of the pit, now the bulk of the supply must be brought from a considerable distance. The same holds true of railway ties, and wherever a railway is operated the demand is likely to increase rather than diminish.

Taken altogether, the outlook in sections depending largely upon lumbering and shipping is not very encouraging. It is believed, however, that there will be sufficient demand for lumber to permit of the disposal of the stocks on hand and furnish fairly remunerative employment to local shipping. Such a culmination should not be impossible, or even very difficult. Much lumber is needed, much transportation is required. Much lumber awaits a purchaser, many ships are idle. Out of these conditions it should be possible to develop a combination that would benefit all parties.

At the present time the labor unions appear to be the greatest obstacles to readjustment. During the past two or three years millions of laboring men have had more money than they ever had at one time before. Many of them made good use of it, but to the majority, it was "easy come, easy go," and many engaged in an orgie of reckless spending which surely helped to keep up prices. They wanted prices to go down, but they demanded higher wages. Thousands of new houses are greatly needed in Canada, but it costs too much to build them. At this time of all times, the labor unions of the building trades fix a scale of absolutely prohibitory prices. This, no doubt, will result in unemployment for many of them, while a reasonable reduction of wages would have given them plenty of work, and made a market for vast quantities of building material. And the labor unions are usually controlled by men who aim to get a good living without work.

New Company Will Specialize in Hardwoods

The new organization known as the Anderson-Miller Lumber Co. Limited, who are successors to the hardwood department of the C. G. Anderson Lumber Co., Toronto, have an authorized capital of $50,000 and will deal in hardwoods exclusively in the wholesale line. The company have taken over the sorting in transit yard of the C. G. Anderson Lumber Co. This yard will be managed by J. A. Cadenhead who recently came to Toronto from Chicago where he was actively engaged in yard inspection for a number of years.

John J. Miller, who is well-known through having been connected for a long period with the National Hardwood Lumber Dealers' Association as inspector in Ontario,, and latterly as hardwood buyer with the C. G. Anderson Lumber Co., is the general manager and vice-president of the new company. The other officers will retain their connection with the C. G. Anderson Co. as well as with the Anderson-Miller Lumber Co.

"The Facts About Lumber Prices"

The retail lumberman in his advertising should endeavor to correct some of the wrong impressions which have prevailed regarding the price of lumber which, for many months, has been "the goat" in all the charges and criticism concerning the high cost of building. Anyone, even remotely connected with the industry, is now on a reasonable basis compared with the cost of production; in fact a number of large operators say that they cannot turn out the ordinary lines at the figure received to-day and make a profit. Production expenses have not been reduced to any extent as yet as 1920-21 logs will in all likelihood cost the operator as much as the cut of 1919-20, which year, in converting the raw product into the finished article, was a top-notcher. Other building materials will have to come down along with lumber and this is no idle prediction.

It is interesting to note what one firm in Washington, Ind., is doing to educate the public in the matter of lumber prices. This organization, known as W. M. Simpson Lumber Co., recently took a space two columns wide by six inches deep in the press to give the public "The Facts About Lumber Prices." This was the caption of the announcement. The publicity was frankly worded and could not fail to carry conviction. Here is the advertisement which is well worthy of perusal—in fact, it might be copied by a number of Canadian dealers who wish to give the trade something timely, instructive and important.

> There has been so much said about Lumber Prices, and so many misleading statements made, that we feel we owe it to the people to tell you the whole truth about the subject. You will recall that we have not been inclined to do much prophesying about prices, but we are now in position to tell you definitey what Lumber Prices have been doing, and what the market is NOW.
>
> The Highest Price that Lumber reached was in February, 1920. Not long after that time the wholesale market began to decline, very slowly at first, a little more rapidly later on, and has continued on the down-grade, until now it appears to most experienced lumbermen that the bottom has about been reached.
>
> While we have not advertised price reductions, we began early to cut our prices to conform to the falling wholesale market. At least three or four times since then we have made definite price revisions as rapidly as justified by our costs. Our last reduction, made early this month, brings our prices down to a point approximately one-third less than the highest point of last winter.
>
> We are perfectly frank to say that lumber is not selling at "Pre-War" prices, notwithstanding some statements that have been made to the contrary. No one who has made the most superficial study of the subject expects lumber to go as low as it once was. There are several reasons for this: 1st, Freight is a considerable factor in the cost of lumber, and freight rates are approximately double what they were before the war. 2nd, Labor and production costs, while they will be reduced, are not likely to reach pre-war levels. 3rd, the supply of lumber grows less each year, while the demand increases.
>
> At no time have we been in sympathy with the efforts that are being made in some quarters to hold retail prices up to the High Price Level long after wholesale prices have been reduced. When the market was advancing retailers made considerable "velvet" on the stock they had bought on a lower market. Now that things have gone the other way there's no reason why we shouldn't all take our medicine like men. Come on in, folks,, the water's FINE.

Building Costs Are Considerably Lower

Estimates vary as to the amounts which can be saved in building a house to-day as compared with the peak prices of some months ago. "From $500 to $800 on an $8,000 house," said a well-known Toronto builder, "and I am saving $1,100 on one corner house I am erecting. I find I can get loans up to 40 per cent. at 7½ per cent. interest."

City Architect Price, of Toronto, made a lower estimate. "I would think $400 a good saving on an $8,000 house," he said. "Lumber is down in price. A builder gets more bricks laid in the same number of hours than he did a year ago, but there are not so many costs that are down."

Enters Action Over Timber Cutting

The action by the Attorney-General of Ontario against J. R. Booth, of Ottawa, will be tried at Ottawa, according to an order made by J. A. C. Cameron, Master in Chambers, at Osgoode Hall, Toronto.

The Attorney-General alleges that the Booth employees cut timber estimated at two million feet, board measure, on the Bonchere River limits of the Golden Lake Lumber Co. Damages to the extent of $40,000 are sought.

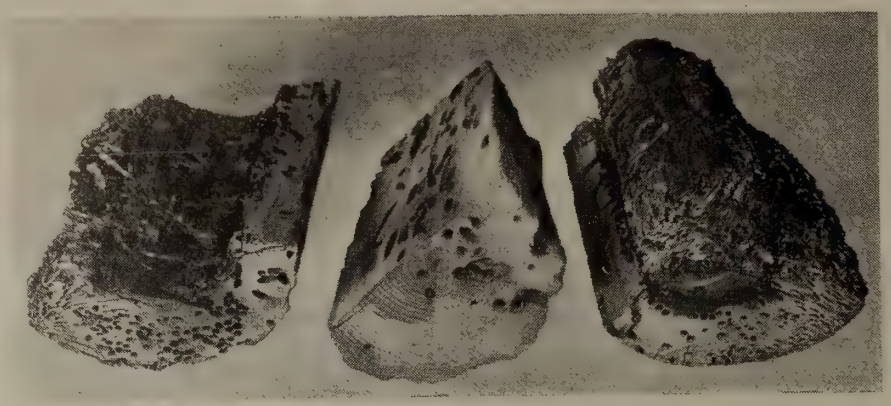
The defence is that the rights to cut this timber were regularly acquired, and that in any event the action is barred by the statute of limitations. The cutting is alleged to have taken place in the years between 1911 and 1915.

Application of Wood Preservation to Canadian Timber Products

By J. A. Coderre, B.A., F.E., Forest Products Laboratories, Montreal

Wood preservation has been defined as the art of protecting structural timber from deterioration by destructive agents. This definition clearly indicates that the term "Wood Preservation" applies only to the protection of timber products and is absolutely different from forest protection or the art of protecting standing timber in the forest.

The principal destructive agents against which it is necessary to protect timber both from an economic and national point of view are: decay, insects, marine borers, mechanical abrasion, fire and other destructive agencies.



Sections of piling destroyed by marine borers.

Decay is undoubtedly the most important destructive agent and is responsible for enormous quantities of wood going to waste annually. The causes of decay in timber are low forms of plants called fungi and bacteria which grow on wood.

The next destructive agent of importance is the insects. So far as may be ascertained at present they cause no appreciable damage to timber products in Canada although the damage done to standing timber is of very considerable importance. Careful research work along this line will have to be undertaken at some later time and may disclose important information. In some of the tropical countries where the white ant is active the problem of protecting timber against its attacks is of major importance. In U.S. the annual loss due to deterioration of timber through insect attack has been estimated at $100,000,000.

Marine borers are either mollusks or crustaceans that bore into wood used in salt water. They will destroy piling in a length of time varying between two months and two years depending on the locality and the character of the water. The worst attacks are generally in very salt clear waters that have a temperature of 55° F. or higher. It might be interesting to know that the marine borers do not eat the wood but use it as a shelter.

In connection with the destructive agents mentioned previously it is of interest to know that most of the preservatives that are efficient in protecting wood against decay will also be effective in protecting it against attack from insects and marine borers.

Mechanical Abrasion means the deterioration caused to timber by mechanical agents. The most usual method of protecting the wood is to use metal plates on the parts subjected to wear. Exposed timber subjected to mechanical wear, will, as a rule, have a low resistance due to decay, due to the ease with which the injured parts will absorb moisture, thus causing a very rapid development of fungus growth.

Rendering Wood Practically Fire Proof

Everybody is familiar with the effect of fire on wood, but it is not so widely known that there are several commercial methods of rendering wood practically fire proof that have proved successful. The process consists in impregnating wood with a chemical substance that will prevent ignition and permit only a charring of the parts in immediate contact with the flames. Wood that has been treated in this way will take any desired kind of finish in the same way as untreated timber.

The above briefly covers the whole field of wood preservation in the true sense of the word. However, in a commercial sense wood preservation today is generally understood as being the art of protecting wood by impregnation with a suitable preservative substance.

The industry of wood preservation is rapidly coming to the fore in Canada and will no doubt soon be one of our great industries. New treating plants are being erected and more will undoubtedly follow.

It is a well known fact that wood preservation has passed the experimental stage and has been proved a commercial success. To-day the information that is most needed is not on the probable life of treated timber, but on the determination of the most economical methods of treatment applicable to various products under given circumstances. It is evident that the life that has been secured from treated timber by someone is no indication of what may be expected by another, unless all conditions of treatment and use are identical.

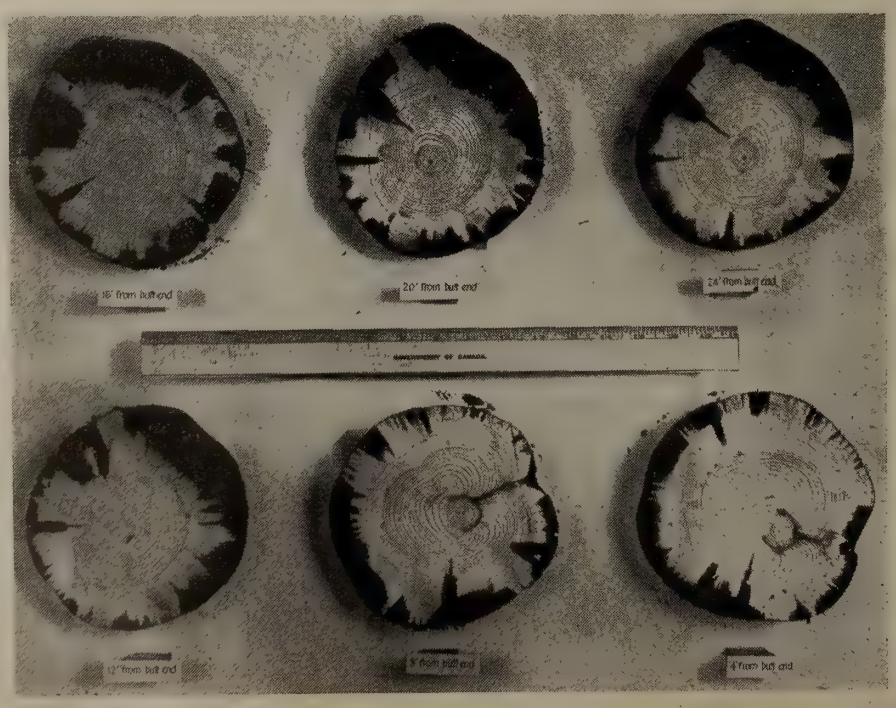
There is an old saying that "a little knowledge is a dangerous thing" and this is specially true in wood preservation. It has been sometimes the case that after reading some general data on the subject, people have decided to go into wood preservation, and in practically every case of this character, a disappointment has followed. The failure invariably can be traced to the disregarding of some point of apparently little importance and in some cases to the neglecting of some of the principles involved in wood preservation.

Preservative Treatment of Timber

Timber products to which preservative treatment may be applied with economy could be divided into eight different classes—crossties, poles, fence posts, piling and boats, paving blocks, shingles, lumber and logs.

Irrespective of the class of products to be treated, there are several factors of treatment affecting the penetration of preservative into wood and it is necessary to take them all into consideration, if success is to be assured.

First, it should be kept in mind that all woods are not equally well adaptable to preservative treatment, for example—it is impossible to treat white spruce successfully by any of the existing commercial methods, while Jack Pine can be treated very easily. Other woods can be successfully treated by special methods only. The reason for the above is the difference in structure of the wood between the various species and a thorough knowledge of the adaptability of the species to be treated to the preservative treatment contemplated is therefore necessary.



Sections of pole showing influence of inner bark on penetration.

After having ascertained that it is possible to successfully impregnate the wood to be used, it is necessary to season the material to a certain percentage of moisture that will ensure an easy access of the preservative to the inner layers of the wood. Green wood could be considered as a recipient full of liquid and this has to be removed before another liquid could be put into it, and unless this is done, it is evident the treatment will be a failure. Moreover, if the wood is treated green or the seasoning is not properly done, the preservative treatment, instead of lengthening, will often shorten the life of the timber due to a slow evaporation of the moisture, and a consequent fast development of the fungus introduced into the wood by checks that will form after treatment, during the seasoning period.

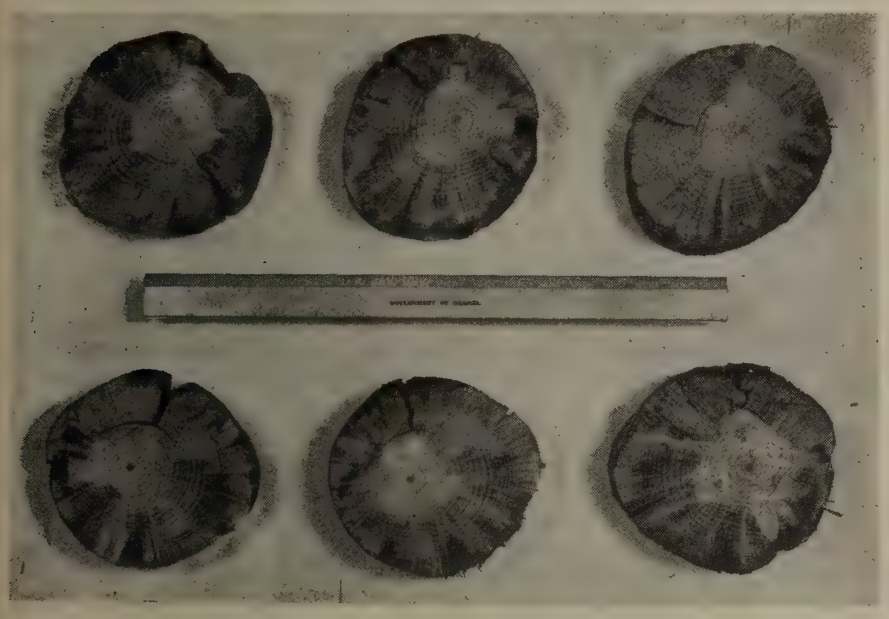
Another very essential point is to remove all bark adhering to the surface of the wood to be treated. The bark, especially the thin layer called inner-bark, is practically impermeable and will prevent the preservative from reaching the wood, thus causing weak spots in the surface, from which fungus will have access to the untreated portion and render the treatment practically useless. A point closely related to this is the manufacturing, before treatment, of all products to be treated so as to be sure that no untreated part will be exposed.

The Heartwood and Sapwood

In a tree there is an inner portion with the pith as a centre in which the cells are generally dead—this is called the heartwood. This portion is surrounded by an outer zone called sapwood, in which the wood cells are alive and perform vital functions. Generally speaking, the sapwood will absorb the preservative much more readily than the heartwood, and consequently the percentage of sapwood present in the timber to be treated will, as a rule, have an appreciable effect on the ease with which it may be impregnated. But there are exceptions to this rule, for example—Hemlock in which there is little difference, if any, between the resistance to penetration offered by sap and heartwood.

The above are the points it is necessary to take into consideration in contemplating preservative treatment on all classes of timber products mentioned previously. Each class also generally presents special features it is necessary to study carefully if the preservative treatment is to be economical. This study will determine the kind of treatment to be applied and the preservative to be used.

In cross-ties two special conditions will influence the selection



Top sections of pole showing decay.

of the preservative and the kind of treatment—they are—the mechanical wear and the climatic conditions under which the ties will be used. For example—in a dry locality where the trouble from leaching of the preservative will not be serious, a treatment with water soluble preservative might be more economical than one using creosote oil, and vice versa, in a wet locality.

If treated ties are used, steps should also be taken to protect them from mechanical wear and in view of this feature a light treatment will be practically valueless and one too heavy will not be economical because the ties will fail mechanically, long before they fail from decay. The ideal treatment in this case is one that will bring the life from decay to the maximum life from mechanical wear and is the one that should be aimed at.

Heavy Impregnation for Poles

In the case of poles a study of the climatic conditions will determine whether the whole pole or only the butt should be treated and which is the most economical preservative to use. A butt treatment will be sufficient in a dry locality where the tops have a long life, but will be practically useless in another where the tops rot very fast and in this case the whole pole should be treated. The fact that the poles are generally round timber, from which the sapwood has not been removed indicates that in most cases a rather heavy impregnation will be necessary on account of the poor resisting qualities of the sapwood to decay in most woods and the consequent need of better protection.

In fence posts the climatic conditions are the special factor to be taken into consideration. In piling and boats we have decay, mechanical wear and marine borers.

Paving blocks present special features and should not be tried if expert advice as to material, treatment and laying is not available, otherwise, a poor pavement, and often a very bad one, will most probably result where the best pavement in existence could be secured.

In the case of shingles, fire risks, odour and appearance should be the determining factors in the selection of a preservative. In lumber and logs one should consider the kind of construction in which it is to be used, the exposure, the kind of finish desired, the odour if objectionable, the fire risks, etc. In this class of products, the most important ones to which preservative treatment should be applied are sills and beams in buildings, floors and columns in porches, silos, trim around the eaves, bench boards and sills in green houses, roofs in mills, etc.

Camp Supplies Come Down in Price

Decreases Arrived too Late to Reduce Materially Logging Expenses During Past Season

The costs of lumber camp supplies which reached their apex in August, 1919, have been gradually subsiding since then, although prices on commodities, which are used largely by the men in the bush, are a long way yet from being as cheap as they were in 1914 before the outbreak of hostilities in Europe.

It has been the practice of the "Canada Lumberman" to publish at intervals comparative prices on leading supplies in order that some idea might be gained of what the outlay is to feed the boys in the shanties. There has been a perceptible drop during the past few months, and whether quotations will go still lower, remains to be seen. Very few lumbermen, however, were able to "cash in" to any large degree on the reduced figures which have prevailed since December last, as the majority of camp requisites were contracted for as far back as June and August last, when values were excessive. It is only on some of the smaller and more mobile quantities that can be used from day to day and easily secured that the logging camp operators have been able to make any appreciable saving.

However, with the present downward trend of foodstuffs, it looks as if operators next year will be able to board the lads of the axe, saw, peevy and pike-pole at a much lower rate than has been the case for the last three or four years, all of which has added materially to the constantly growing disbursement of producing lumber.

Oats are also considerably cheaper than they were a year ago, the Western variety selling at 68 to 70c in bags, delivered, as compared with $1.00 and $1.10 in August last. Ontario oats are about 10c cheaper than the Western variety. Hay on cars delivered at destination is $35.00 to $40.00 per ton in Ontario, which is about the same as six or eight months ago.

The average cost of camp supplies in August, 1914, August, 1919, and March, 1921, as gathered in Toronto, is.—

		August 1914	August 1919	March 1921
Barrelled Pork Reg. Mess		26.00	55.00	36.00
Short Cut Back		28.50	64.00	41.00
Clear Fat Back	85/100	24.00	65.00	38.00
	70/85	25.00	67.00	39.00
	50/70	26.00	69.00	40.00
	40/50	26.50	69.00	41.00
	30/40	26.50	70.00	42.00
Bean Pork		24.00	49.00	32.00
S. P. Rolls		26.00	70.00	52.00
Barrelled Beef		28.00	36.00	36.00
		28.00	32.00	31.00
		18.00	30.00	26.00
Smoked hams	12/18	.18½	.48½	.38
	18/25	.17½	.46	.34
	25/35	.16½	.43½	.30
	35/up	.16	.40½	.28
Bacon	8/10	.18½	.56	.42
	10/12	.18½	.56	.42
	12/14	.18	.55½	.40
	14/20	.16½	.55½	.40

Medium Bulls, 600/900		.12	.16½	.13
Sugar (No. 1) standard granulated)		$4.51	10.50	10.84
Coffee (Rio)		17-80	37-39	.24
Tea (Indian Pekoe Souchong)		19-20	45-47	35-48
Oatmeal (Standard 98 lb. bags)		$2.50-$2.65	$6.00-$6.30	4.90
Beans (Canadian Whites)		$2.10-$2.25	$5.40-$5.70	3.30
Flour (Manitoba White, sec. pats.)		5.10	11.00	10.20
Potatoes (N. B., per bag)		1.75	2.60	1.10
Prunes (60 to 70 to the lb., 50 lb. boxes)		10½-11	.25	.15½
Apples, (Evaporated)		9-10	.22	.13
Rice (Rangoon)		3-4	.13	.7½
Corn Syrup (barrels)		.3½	.8¼	.07

Major Streight Retires From Lumber Trade

Major J. E. L. Streight, Islington, Ont.

Major J. E. L. Streight of Islington, Ont., who recently sold his woodworking factory and lumber yard to the Irvin Lumber Co. of West Toronto, is widely known in the industry. He has had an interesting career in military circles and took part in the South African war, in which country he remained for some years after the close of hostilities. He returned to Canada in 1908 and started in the lumber business at Islington. When the world-war broke out in 1914, he promptly enlisted and commanded the first 250 men to leave Toronto, departing in charge of the contingent on August 11th, 1914. He took part in several engagements and was wounded and taken prisoner at St. Julien on April 24th, 1915. The Major was a prisoner of war for three years when he was exchanged and returned to Canada. He has spoken before a number of representative gatherings, outlining his experiences and describing some of his thrilling attempts to escape, and the hardships and cruelties endured during the time that he was in the hands of the Germans. Arriving in Canada in August 1918, Major Streight re-opened his lumber yard on a new site with railway track facilities and also erected a planing mill, which is well equipped. Major Streight will enjoy a rest for the present. It is interesting to note that he has been prominently mentioned as the Liberal candidate in West York, which constituency became vacant recently through the death of Capt. Tom Wallace of Woodbridge.

Officers of Timber Industries Council

The full list of the officers and council of the Timber Industries' Council of British Columbia has now been completed. They are: Mr. E. W. Hamber, president; Messrs. J. C. Cameron, M. D. Rector, A. K. Leitch, A. D. Anderson, Norman B. Lang, G. G. Johnson, C. D. McNab, Robert McNair and M. S. Logan, directors; M. A. Grainger, managing director. The council members for 1921 are: Messrs. J. O. Cameron, E. J. Palmer, E. W. Hamber, A. Flavelle, B. M. Farris, representing the B. C. Lumber and Shingle Manufacturers' Association; M. D. Rector, G. C. Johnson, P. L. Lyford, F. S. Buck, C. E. Garrett, representing the B. C. Loggers' Association; A. K. Leitch, C. D. McNab, H. H. Ross, J. S. Deschamps, H. C. Meeker, representing the Mountain Lumber Manufacturers' Association; A. D. Anderson, Robert McNair, C. J. Culter, J. Black, J. A. Edgecumbe, representing the Shingle Agencies of British Columbia; Norman R. Lang, A. B. Martin, A. E. McMaster, representing B. C. pulp and paper companies. An association of B. C. timber holders is in course of formation and when completed will be added to the council.

Reducing Timber Losses Through Waste

Each year the question is raised as to whether it would be in the public interest to prohibit the exportation of Christmas trees from Canada to the United States.

In the first place, the great bulk of Christmas trees so exported are cut from privately owned lands, says Clyde Leavitt, chief forester, Commission of Conservation, Ottawa. In many cases, they are cut from pasture lands upon which the the farmers desire to check tree growth in order to maintain the pasture. In other cases, trees are cut from swamp areas or muskegs where the growth is very slow, but where growth in the open is favorable to the symmetrical development of the tree, thus rendering it particularly suitable for Christmas tree purposes. In neither of such cases would the prohibition of the export of Christmas trees have any noticeable effect in increasing the supplies of material suitable for pulpwood or lumber.

It has not been seriously suggested that residents of Canada should be prohibited the use of Christmas trees. These trees are usually available locally. If, however, exportation to the United States were to be prohibited, there would be many farmers or other owners of private lands along the International boundary whose market for Christmas trees would be cut off entirely or greatly reduced. In such cases serious objection would be raised to the action suggested. The selling of Christmas trees affords farmers and others an opportunity for winter work and revenue. The systematic growing of trees for pulpwood or lumber involves a long-time element, which makes this usually a matter for governments or long-lived corporations. In either case, it is a business proposition. There is no reasonable doubt that the farmer can secure a larger revenue from the sale of Christmas trees than would be the case were he required to let the trees grow to sizes suitable for either pulpwood or lumber.

As a matter of fact, the waste in connection with pulpwood and saw timber operations in all our forests outweighs, many thousand times over, any possible loss which can be figured in connection with the Christmas trade. The annual loss from preventable forest fires is in the same category. Before any government can take the matter of the Christmas tree trade so seriously as to contemplate prohibiting exports, it should provide really effective forest fire protection and take steps to eliminate unnecessary waste of merchantable material in connection with logging operations on Crown timber lands.

The agitation for the enforced discontinuance of the Christmas tree trade, in whole or in part, shows a very healthy anxiety for the public welfare. However, this very commendable anxiety would much better be directed toward promoting increased efficiency in forest fire protection and a reduction of the truly staggering losses which take place each year through unnecessary waste of merchantable material in connection with logging operations.

Canadian Doors Must Bear Certificate

The uncompromising attitude of the English building trades labor unions, which has prevented the employment of British ex-service men and considerably hindered the relief of the housing shortage here, is now proving an impediment to the Canadian wood products trade with the United Kingdom. A representative of the Dominion Industries, a Canadian firm established in London, says that building trades operatives are objecting to the use of Canadian-made doors in houses built under the Government's housing scheme, and that they have refused to hang these doors unless certificates were presented showing that the doors had been made by union labor in Canada working under union conditions. A large trade in doors, sashes and other fittings for houses had been expected by Canadian exporters in these lines, but this attitude on the part of British labor has negatived these hopes, as the British Health Ministry has not only notified importers that they must present certificates of the kind mentioned with their imports if these are to be used in Government-built houses, but that on account of the unemployment here it has now been decided to manufacture most of these fittings in Britain.

The huge stocks of timber, more especially spruce, which still remain stored at Canadian and British ports, are proving a great deterrent to the resumption of the normal lumber trade between Canada and Great Britain. Col. R. M. Beckett, of Dobell, Beckett and Company, Quebec, said recently that the members of the British Importers' Association, which has taken over this timber from the British Government, were now discussing methods of disposing of these stocks in such a way that trade would not be disorganized. Thus the same situation exists regarding Canadian lumber as in the case of Canadian flour and canned salmon, the dead hand of British Government control paralyzing the trade.

Says B. C. Woods Will Dominate World

The past year has been a satisfactory one for lumber and shingle manufacturers, the immediate future is not bright, but the time is coming when Pacific Coast timber will dominate the world markets. Such is the gist of an interesting report presented to the Board of Trade of New Westminster by Mr. J. R. Agar, followed by a survey of the conditions on this continent as regards available timber.

The cut of sawmills in and adjacent to New Westminster last year was 200,000,000 feet, and the output of shingles, including the Shull mill on the North Arm, was from 300,000,000 to 325,000,000.

Especially the first half of the year had been very satisfactory, and had offset the depression of the end of the year.

As to the immediate future, Mr. Agar had little to say. At the present time the coast mills are absolutely shut off from the eastern markets by the freight rates, which enable the southern pine interests to ship to Montreal, for instance, at $4 per thousand below the British Columbia mills. In these circumstances, the only hope was to ship by water to ports that could handle quantity shipments, and in this regard it was important that the river be kept open.

Mr. Agar proceeded to quote some interesting statistics as to the available timber supplies. The total stand of Southern pine is estimated at 220 billion feet, and the annual output is 15 billion feet. On the other hand, California alone has 326 billion feet of soft timber and the whole of the Pacific coast 1,674 billion feet. The annual cut is 11,386,000 feet. It is predicted that by 1925, Pacific coast timber will dominate the situation owing to the exhaustion of Southern pine stands.

Upper (softwood) yard of the Brompton Lumber & Mfg. Co. with piling capacity of four million feet.

Progressive Eastern Plant is Well Laid Out

How the Brompton Lumber and Manufacturing Company Obtains Maximum Production by Efficient Operation and Time and Labor-Saving Methods

The plant of the Brompton Lumber & Mfg. Co., Bromptonville, P.Q., is an example of a rejuvenated woodworking factory making sashes and doors, hardwood flooring, mouldings, dressing and sawing lumber. Besides this, a wholesale lumber trade is carried on.

The company was organized in October, 1919, when the plant of the Tobin Manufacturing Company was taken over, after it had been closed for several years. The factories have been completely overhauled and additions made, and a large amount of new equipment installed. The result of this reorganization was a large volume of business; about 14 million feet were dealt with during the last twelve months in one of the most up-to-date and largest woodworking plants in Eastern Canada.

The president of the company is Mr. E. W. Tobin, M.P.; the managing director, Mr. U. E. Germain; secretary-treasurer, Mr. J. O. Asselin; and Messrs. P. Alegre and J. P. Mullins are also directors.

The plant is situated on the St. Francis River, five miles from the city of Sherbrooke, with Grand Trunk Railway sidings alongside the mills and right into the yards, which are divided into two sections, one for hardwoods and the other for softwoods. The plant consists of a planing mill and re-sawing equipment, with a capacity of over a million ft. per month; a hardwood flooring mill, with a capacity of 200,000 ft. per month; a moulding mill; a sash and door and interior trim factory, with a capacity of 200 doors per day and 500 sashes; and a wholesale lumber department. Besides these, there is a sawmill at Stoke, seven miles from Bromptonville, and another sawmill at St. Francois Xavier, also seven miles from Bromptonville in another direction. The company, through Mr. E. W. Tobin, the president, have connections with several large sawmills in Eastern Canada which he controls.

The entire plant is laid out on a systematic plan which has for its purpose the rapid despatch of orders and the maximum of efficiency in all departments and operations. In order to acquaint each department with its duties and the relation of the department to the other departments, the management has devised an "organization chart" which tells at a glance the definite duties of each; also the persons in charge, their position, their assistants, etc. The management is thus relieved of much detail work, and is always in direct touch with the working of the organization, since all heads report to a superintendent who, in his turn, confers with the management.

Hardwood flooring department, showing trimmers and end matchers.

Good Results from Efficiency Department

It is interesting to note that there is a department called the "Efficiency Department" which comes directly under the manager's supervision. Mr. Germain created this department early last spring, and states that he is pleased with the results obtained. As the name implies, this department is for the sole purpose of recording productions of departments and machines, to watch for leakages, wastes, etc., and to apply proper remedies. The head of the department receives his orders from the manager only and he has access to all parts of the plant, stores, offices, etc.

To obtain the maximum of production output from the several machines through the plants, each machine is fitted with a meter showing the number of feet manufactured daily. These figures are recorded every morning in the manager's office on a large chart, together with the total idle time of each machine. The chart shows the minimum alloted the machine, daily and monthly, and if the output is above the minimum at the end of the month, the foreman receives a bonus in cash, but if the output is below the minimum he is called in for a bit of a personal interview with the manager.

When there is a stoppage of a department or a machine for an unusual cause, such as mechanical defects or breakdowns, the production clerk notifies the manager on a special slip called "Signal For Manager" the cause of the unusual stoppage. If the cause is due to poor supervision of the Master Mechanic he is

interviewed and the department affected gets a credit for the lost time, which does not affect the monthly percentage. Mr. Germain states that he has doubled his production in three departments and he has also improved his yard service to a point of great efficiency, as there are now no delays in deliveries of lumber to the machines. Every foreman looks out for his supplies. Many men return at night to inspect their machines and put them in shape to start at the first turn of the engine in the morning. When the production is way above the minimum allotted, the bonus is worked on the extra footage produced, thus encouraging the foremen to do still better every month. Any defective material is charged to the foreman and taken out of his wages so as to prevent any possible slackness or neglect to increase production at the expense of quality.

Hardwood flooring grading racks with compartment for each length.

The yards have a combined capacity of six million feet of lumber, divided in two sections, one for hardwoods for the hardwood flooring department, and one for softwoods for the planing mill department. A third and smaller yard is used for storing lumber used in the woodworking factories such as pine, basswood, clear rough B.C. Fir, etc. An unusual system of stock-keeping is in operation under the supervision of the Cost Accounting Department. Every lumber pile bottom bears a number which is never changed and the stock clerk's book contains a sheet bearing a corresponding number and the details of the stock contained in each pile. The stock clerk daily checks up with the piles in the yards the feet in the piles which have been handled during the previous day, adding or deducting the necessary quantities on the corresponding sheet in his book. In order to avoid errors, the yard foreman puts a signal (a piece of thin board painted in red) on each pile handled during the previous day; this the stock clerk collects and brings back to the yard office. The stock clerk enters in another book, called the "Lumber Book" under the proper species, size, width and length, the changes which have been made during the previous day, so that the Lumber Book is always up-to-date. It is thus, easy to ascertain the total quantity of lumber of a certain thickness, width and length. At the end of the month a stock sheet is made out from this "Lumber Book." Mouldings, hardwood flooring, doors, sashes, etc., are also recorded in the same way but under bin numbers instead of piles.

The shipping department, under the supervision of the head shipper and with seven tallymen, comprises twelve double teams, two five ton motor trucks with semi-trailers, and four single horses for the handling of the lumber buggies in the local yards for the supply of lumber to the mill. When working at capacity, eighty men are engaged in the yards. The lumber receiving department is under the same supervision but is looked after by the yard foreman only, who directs the location of all lumber received and the way it is to be piled. A standard piling arrangement is recorded on a map and no change is allowed to be made unless fully discussed with the management. This means a great saving of labor and space, besides being very convenient for new hands to become familiar with the yards in a short while.

The main mill consists of two storeys, 90 feet wide and two hundred feet long. The offices are situated on the street end of the building, on the ground floor and consist of local sales, mailing department, accountant's and general offices, wholesales sales, efficiency department, stores and the manager's rooms. The treasurer has his office separate from the mill. On the ground floor of the main building are situated the hardwood flooring, mouldings, and breaker up departments.

Testing Lumber Going Into the Kiln

With a view to establishing a good and reliable grade of hardwood flooring every precaution is taken to manufacture a uniform grade of material equal to none as far as finish and dryness is concerned. The kilns comprise a battery of four progressive kilns twenty feet by eighty five feet each, with a combined capacity of 320,000 feet. No lumber is allowed to enter the kilns before ascertaining the degree of humidity contained in the lumber. Tests are made of all material going into the kilns. The first test is made by the scalometer, which determines the percentage of humidity in the material about to be dried. If the humidity is above or below a certain percentage it is directed into a slow drying or fast drying kiln according to the amount of humidity required to be dried out. The importance of properly dried out lumber for manufacturing purposes is recognized and to that end twice every day a record of the temperatures in the kilns is taken from the recording thermometers, the air velocity as recorded by the anemometers, the humidity in each kiln is recorded by the hygrometers, and the outside temperature. When a lot of lumber is due to come out a second test is made. This test is very severe, the lumber tested being subjected to a temperature of 450 deg. F. in an electric oven for that purpose. If the lumber under test shows more than 5.6% of humidity it is not allowed out of the kiln.

The manufacturing is followed throughout in the same strict

Part of the planing mill, showing Yates band resaw and matchers.

manner. When the lumber is released from the kilns, it enters the flooring department on rails, where it is delivered to the rip saws. These rip saws were devised by the millwright of the company and differ from the others in the fact that regardless of the widths of the rough boards, the ripping is all done in one operation. There are two receivers to one feeder, as the wide boards multiply quickly on this rip saw. The receivers then place behind the fast matchers the strips according to their widths. There are two fast P. B. Yates No. 87 hardwood matchers running continually making flooring. The flooring drops on a table alongside the trimmers after which it goes to the two C.M.C. upright end matchers. When the material is end matched, it is fed through an American Machine Co.'s flooring scraper, making it of uniform thickness. In case one of the machines might have changed its settings, an inspector watches for any change in settings or other defects which might pass the operators. When the flooring is released from the scraper it is trucked away to the grading room, adjoining the large flooring shed. The grading room is equipped with a homemade devise which automatically figures out the footage in each bundle without any possibility of error. This device has saved two men in the grading room and besides several hours' work in the accountant's office. Each bundle is stamped as to the grade and footage.

On the ground floor of the main building is situated the moulding department, which comprises four stickers, P. B. Yates and C. M.C. machines. Three machines are for stock pattern mouldings, and one for special work for the factory department. The stock mouldings are made on a requisition from the stock clerk according to the standing of the mouldings in stock in the large moulding shed. As a bin gets low a production order is made out; this goes to the moulding department foreman who arranges his machine to produce mouldings of the desired shape in order to make very few settings during a day. The meters on the stickers answer two purposes—they record the lineal footage of the stock run, and this serves as the record for the stock clerk.

The planing mill is off the main building, and is operated by a separate motor. It comprises one P. B. Yates 341 band resaw, one Montmagny circular saw and carriage for resawing large timbers, one power feed circular table resaw, and two fast feed P. B. Yates No. 91 softwood matchers. The lumber is brought in by lumber buggies and taken away in the same way, when not unloaded from one car and loaded on to another from the railway siding which is situated near the planers.

The woodworking factory is situated on the second floor. At the front end there are the offices of the superintendent, the foreman, the drafting room and the cost accountant's office. This department manufactures pine and B.C. fir doors, cupboards, stairs, sashes, frames and special millwork. It is equipped with the latest machinery in "duplicate battery" for quantity production. The benches are located

Main building of the Brompton Lumber & Mfg. Co., Bromptonville, Que., showing one of a battery of kilns on left.

on both sides of the upper floor, where the light is plentiful. The breaker up department is on the lower floor, where the pine, B.C. fir, etc., is received from a special softwood kiln on trucks. The factory foreman issues a requisition for every order manufactured, one copy going to the breaker-up and the other copy to the cost accountant. The lumber is cut up to the size wanted and sent to the upper floor by an elevator which takes up trucks and lumber, where it is delivered to the marker, who spots the material for the tenoners and mortisers and routes the work throughout the factory. All processes of work done on the order are recorded on the individual time sheet, and when the article is completed the general office has the entire cost with the completed order. This department has a capacity of 200 doors per day and 500 sashes and frames besides other mill work. Adjoining the factory department, above the planing mill is the veneer department, where veneering of all descriptions is done.

In a large building connected to the main building by a viaduct are the painting and glazing departments under the control of the factory foreman. Underneath the paint shop are the carriage shop, blacksmith shop, the machine shop and filing rooms.

The power plant is in a brick building 60 feet long by 35 feet wide. In this building is a 325 h.p. Corliss engine manufactured by the Jenckes Machine Co. of Sherbrooke, and two 125 h.p. boilers fed by Sheldon's refuse collectors. The engine and boiler rooms have been recently rebuilt, and new equipment added. All condensations are collected by an elaborate system of crane traps, which bring the water back to the boilers at a temperature of 210 deg. F. requiring but very little fuel to bring it up to boiling point, thus saving a large quantity of shavings, which are baled and sold as fast as they are available. The heating system throughout the plant is very effective. Besides the steam power there are one 100 h.p. C.G.E. electric motor and one 50 h.p. Crocker-Wheeler electric motor, making a total of

Main yard of the Brompton Lumber & Mfg. Co., Bromptonville, Que., showing piles of pine and clear B. C. fir for factory use.

500 h.p. to operate the plant, besides small motors in the machine shop, grinding rooms, etc.

The company also have a steam creosoting plant, where they treat fence posts and timbers for underground construction.

The machinery used in the woodworking plant includes equipment supplied by the Canada Machinery Corporation, of Galt, Ont.; New Britain Machinery Co. of New Britain, Conn.; Cowan & Co., Galt, Ont; Baxter Whitney & Son, Winchendon, Mass.; Greenlee Bros. & Co., Rockford, Ill.; P. B. Yates Machine Co., Hamilton, Ont.; MacGregor, Gourley & Co., Galt, Ont.; Shimer Cutter Co., Galt, Ont.; H. B. Smith Machine Co., Smithville, N.J.; American Woodworking Machinery Co.; J. A. Fay & Egan Co., Cincinnati, Ohio; Rowley, Hermance & Co., Williamsport, Pa.; L. G. Knight & Sons, Gardner, Mass.; Canadian Fairbanks-Morse Co., Montreal; Exeter Machine Works, Exeter, Mass.; E. C. Atkins & Company, Hamilton, Ont.; and several others.

One very active department is a newly organized advertising department, which has inaugurated a planning section. Advertisements are inserted in local papers notifying prospective builders that

A portion of the busy sash and door plant.

the company supply sketches, floorplans, specifications, bill of material, together with the cost, delivered on the job within fifty miles from the plant, if on roads accessible to motor trucks. We understand that several sales of houses have been made already, and the demand for the service is very encouraging.

The company has three young returned officers training for road work, and they will soon be on the road fully conversant with the lines the company manufactures.

Large Over-run Under the Doyle Rule

It appears that the Ontario Government has been conducting for some time a scale of the logs and mill-cut at some twenty-six mills in the province for the purpose of ascertaining the amount of over-run shown in the actual amount of lumber cut over the Doyle rule of measurement of such logs, the primary object being to determine the amount of over-run lumber firms are legitimately entitled to. In the Ontario Legislature recently Hon. Beniah Bowman, in answer to a question by W. H. Price, K.C., of Parkdale, stated that the average percentage of increase or over-run, in lumber actually cut, was 31.9 per cent. over the measurement revealed by the Doyle Rule measurement of the logs, with a maximum over-run of 69.4 per cent.

In giving his statement to the House, however, the Minister of Lands and Forests stated that his figures showed the over-run of "merchantable" lumber.

Hon. G. Howard Ferguson objected to the question being answered in that way. Mr. Price, he pointed out, had asked for the total over-run. "Merchantable" lumber did not mean marketable lumber, he pointed out. It was a trade name and did not cover cull lumber, box lumber, lath, etc., which was marketable but not "merchantable."

The Minister promised to bring down an amended answer later.

The significance of the answer given is that the legitimate over-run under the Doyle Rule has run as high as 69 per cent. on "merchantable" lumber alone, which indicates that on all marketable lumber turned out, lumber dealers in cases have been entitled to a much larger over-run. The figures given suggest that some of the indignation voiced regarding the large over-run shown by the timber inquiry was not founded upon fact.

Canadian Lumber Looked Upon as Best

A. E. Bryan, Canadian Trade Commissioner in Yokohama, Japan, in a recent letter says. This is said to be the greatest accumulation of Douglas fir ever tied up in this country, and it will undoubtedly be some months before any noticeable demand is felt. Owing to the inactivity in the building trades and in the construction of wooden ships, the quantity consumed during the coming year, will certainly be much smaller than has been the case during the last two or three years, and those in the know state that no new orders will be placed from this side for some two or three months yet.

As regards cedar board, there is also large accumulated stock in the Osaka and Kobe districts, but providing the prices are comparatively low there is some possibility of business being placed in the near future.

Canadian lumber is always looked upon as of better quality than that from the United States, and therefore will command a little better price, but the conditions so far have been that Japanese importers have nearly always been able to land their American lumber cheaper on account of being able to obtain lower freight rates from American ports. Some importers also state that the prices quoted by American exporters have been a little bit lower than what they would have had to pay for a similar Canadian product.

Logging Activities at Eastern Points

A recent report from Salisbury, N.B., is to the effect that various lumber operations in that district are progressing favorably. The operators maintain that it has been an excellent winter in the woods for chopping and yarding lumber. The swamps have been firmly frozen over and conditions generally good. At Monteagle A. D. Lockhart and A. H. Thomas are getting out lumber. At North River, Richard McLeod is still working on a cut of a half million feet of logs; while the Salisbury Lumber Company, which took over the A. L. Wright mills at Coverdale, are getting out their usual cut at Little River.

Prices of Pine Are Holding Good

Writing to the "Canada Lumberman," a leading lumber merchant of New York says: "As far as this side of the line is concerned, prices on white pine, especially those of the higher grades, are holding good, but there has been quite a material lessening in the lower grades caused by the decline in prices of yellow pine. There seems, however, to be a reaction and in certain lines prices are advancing. We firmly believe that the decline has reached bottom, and we are looking for a prosperous year in the lumber business.

Putting Oneself in Place of Another

The art of putting yourself in the place of others and exercising a little forethought often proves a profitable pursuit. Some people call it tact, and salesmen are wont to term it good selling science.

It must be a paying proposition or people in all avenues of business would have discarded the policy long ago. There are many advantages in the put-yourself-in-his-place doctrine.

As a result of considerable thinking on the part of a retail lumberman who is early preparing for the spring season, a promising advertising campaign is about to be engineered by this live-wire merchant in one of the cities of Western Ontario..

First, he places himself in the position of the home furnishings dealer. If he were selling furniture, etc., there would naturally arise within him the desire to see more homes going up and extensive improvements around the city to revive his business. He would also come to the conclusion that, only through this state would his business climb to the higher level he had planned and would naturally be waiting for some move on the part of those in a position to start the wheels of the building trade.

Secondly, he places himself in the position of the average citizen, in his cramped and unsatisfactory surroundings where he is forced to abide through the scarcity of reasonably priced houses.

The Longest Spruce Tree in the East

What is said to be the longest spruce ever cut in the province of New Brunswick for many years was recently yarded by Benjamin Underhill at his camp at the Two Brooks, on the Upsalquitch River. The tree scaled 1,507 feet, made up of five logs as follows: 452, 444, 397, 150, 64. The scaling was done by John Farren of Campbellton and James Colwell of St. John, N.B. Another feature was that it was yarded by one horse, which was considered unusual.

What Wireless Telephony Means to Lumbermen

By Douglas R. P. Coates, Montreal

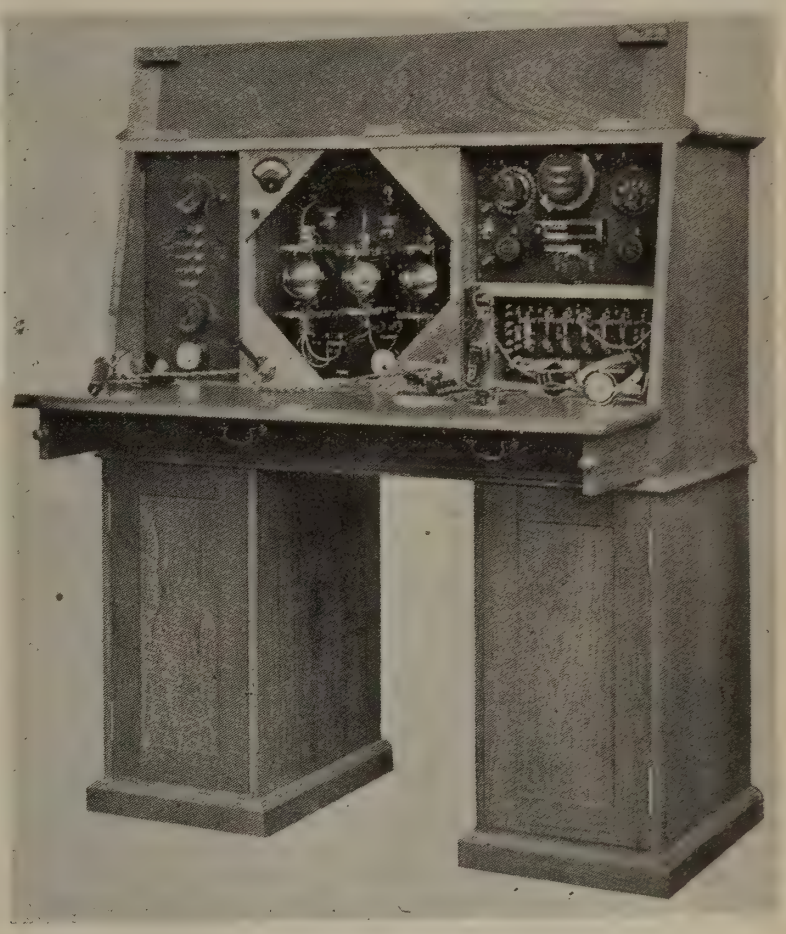
The development of Wireless Telephony means a great deal to Canadian lumbermen—more, indeed, than they, whose acquaintance with that development has been formed exclusively through the medium of newspapers, realize. Accounts of startling stunts, such as long-distance communication with suit-case apparatus, addresses from aeroplanes in flight made audible to crowds of people on Mother Earth—etc.—have reached most of us by way of headlines designed to please a public whose appetite for thrills has been surfeited by a few long years of war. I rather dislike those stories; not that they are always overdrawn or frequently false—some of them may be perfectly true—but they tell only of the spurts, the "high-spots," one might say, of radiotelephony and make records not truly representative of the sure and steady progress of the science. That the resulting attitude of the public is more or less one of disbelief, an inclination to swallow every story of wireless with a generous amount of salt, is not surprising! Canadian lumbermen may be assured that underlying the accounts of almost incredible performance there exists a stratum of actual achievement which has raised the wireless telephone from a scientific toy to a practical instrument in the social and commercial service of man.

That speech and music were received in Newfoundland from England by wireless telephony a few months ago may appear wonderful indeed, promising a not far-distant day of regular public radiotelephone communication across the Atlantic, but Canadian lumbermen will be more interested to read that wireless telephones have been in use for some time in forest patrol work in Western Canada, and have already passed the test of a bush fire and earned the confidence and praise of prominent forestry officials in British Columbia, where a number of launches and look-out stations have been equipped.

The question of skilled operation of wireless telegraph apparatus has troubled many lumber and pulp men who foresaw difficulty in securing trained wireless telegraphists at reasonable wages and who hesitated to purchase equipment which might at short notice become a white elephant. That was a year or two ago—a long time in the history of a growing industry like that of radio manufacture. Following the end of the war, the modification of government restrictions set hundreds of amateur wireless experimenters to work constructing private installations according to modern ideas as disclosed by the latest text-books. The gospel spread among people of both sexes and of ages from fourteen years upward, until to-day wireless fills the place once occupied by almost every hobby, from fretwork to the maintenance of white mice. Thus a field has been created from which may be drawn men who, with a little additional training may be made capable of intelligently handling commercial wireless equipment. Your clerk of the very near future is going to be able to work your wireless set for you, just as he is now able to run your motor boat or car. But quite apart from the solution of the operator difficulty by simple increase in number, the problem has been attacked on another front by the development of radiotelephony, obviating the need of a telegraphist and only necessitating the employment of someone capable of starting or stopping the machine and having some understanding of the general principles of wireless.

The up-to-date radio equipment being used by forestry and commercial concerns to-day is primarily a wireless telephone set, capable of sending clear speech over distances of from one hundred to two hundred miles and of receiving speech over many times those distances, according to the power of the transmitting station. By the simple operation of a switch, the set becomes a wireless telegraph transmitter and as such can radiate continuous waves or grouped waves affecting receiving stations of one type or another at the will of the sending operator. The range is approximately trebled when the installation is employed for wireless telegraphy and, as is true of all wireless stations, the range increases very considerably at night and under particularly favorable conditions.

The illustration shows a Marconi ½ Kilowatt wireless telephone and telegraph cabinet, very adaptable to the requirements of lumbering settlements, mining towns, etc., in Canada's outlying districts, where the cost of erecting land-lines is considerable and the maintenance of miles of wire and poles a serious difficulty. As the illustration suggests, the instrument is by no means a toy. Wireless telegraph and telephone transmitter, tuning and receiving apparatus are assembled in a substantial wooden case which can be locked to prevent wilful or careless interference with the set during the operator's absence. Connected with a pair of 200 foot aerial wires elevated to a height of 100 feet, a set of this type should easily cover a range of 100 miles by radiotelephony, with telegraph and special-condition ranges in proportions as outlined above. Larger or smaller installations are designed,



Wireless telephone and telegraph cabinet.

as required. Thus, for trans-Atlantic communication with the "Victorian" when she brought over the Imperial Press Delegates last year, the Marconi engineers in England installed tremendous. Developments in the apparatus itself will come a powerful station at Chelmsford, while for forestry purposes the Canadian Marconi Company has portable cabinet outfits of rugged workmanship which fulfill the demands of easy transport and hard wear and tear.

Manufacturers of wireless apparatus are developing public interest by radiating regular concerts by radiotelephone. Montreal and Toronto are covering Eastern Canada with phonograph music which penetrates our houses and is yours for the small cost of an instrument wherewith to detect it and make it audible. The lonely lumber camp is throbbing with vibrations which, by the setting up of a receiver, may be translated into the day's news from the big city; the weather forecast or the voice of a favorite singer. Soon, from East to West of this glorious Dominion, from the South to the Northern fringe of civilization, there will be no isolation. Wireless telephony will link the humblest shack with the busy centres of commerce; it will connect forest rangers with headquarters and lumber camps with mills and offices for the benefit of us all.

Sudden Death of Roy Stewart

The late Roy R. Stewart, Hamilton, Ont.

With shocking suddenness death came to Roy R. Stewart of McCormack & Stewart, wholesale lumber dealers, Bank of Toronto Building, Hamilton, Ont. Mr. Stewart was ill less than 48 hours. He was at the office on Wednesday, March 2nd, and on Saturday, March 5th, had joined the silent majority. The exact cause of his death has not yet been determined and the physicians are at a loss to account for the fatal termination, Mr. Stewart having enjoyed his usual good health up to within the last few days when he complained about not being able to sleep. Other than that he gave no indication of anything ailing him. The funeral, which took place from his late residence in Hamilton, on Monday, March 7th, was attended by a large number of members of the lumber industry from Toronto, Brantford, Hamilton and other points.

The late Mr. Stewart, who was 33 years of age, leaves a wife and two small children. For the last 16 years he had been actively identified with the lumber industry. His first position was with the Independent Lumber Co., Moose Jaw, Sask. Later he went to their sawmill in British Columbia, where he remained until 1906, and then returned to the East. He took a position with the Consusmers' Lumber Co. of Hamilton and managed this organization for two years, after which he joined the travelling staff of the Long Lumber Co., Hamilton, covering Western Ontario. He was in their service until the spring of 1916, when he became associated with Muir & Kirkpatrick of Toronto. He sold for them not only in Ontario but in the United States and also bought lumber for them and looked after their stocks in New Brunswick, Quebec and Ontario. A little over a year ago he formed a partnership with James L. McCormack of Brantford, also a well-known lumber traveller, under the title of McCormack & Stewart, and they had worked up a splendid business throughout Western Ontario. Mr. Stewart's passing will be regretted by very many friends.

Getting Busy on New Mechanics' Lien Act

The secretary of the Ontario Retail Lumber Dealers' Association has sent out to the members of that body a summary of the Mechanics' Lien Act prepared by the association. It is stated that on the second heading of the measure in the Ontario House, it will be submitted to a special committee for consideration and discussion. It is understood that the bill is patterned after the Mechanics' Lien Act of Ohio, which has given every satisfaction to the retail lumber dealers in that state, and is looked upon as a model piece of legislation.

Secretary Boultbee will, probably, arrange to have Ralph Lucas, attorney of Columbus, who draughted the Mechanics' Lien Act of Ohio, come before the committee and explain the workings of the measure and its various provisions as they have become operative in Ohio. Mr. Boultbee is also urging upon the various retail lumbermen to interview personally or write a strong letter to the members of the Legislature from their respective counties, urging them to support the bill and also telling the M.P.P.'s of the troubles under the present Mechanics' Lien Act, which is practically no protection at all for the retail lumber dealer and other supply men.

A summary of the salient features of the proposed act is as follows:—

The new Act makes the owner responsible for all accounts due for labor and material. Contractors must furnish affidavits showing amounts earned. The owner will then pay laborers and material men direct. The contractors will not be given money to pay laborers and material men. This will prevent dishonest contractors from using the money on another building and giving a note to the material man.

If a contract is entered into for a price, which the owner knows, or should know, is too low, he will be liable, under the Act, for the amount which the building should reasonably have cost.

The owner will not be allowed to set off, against the material men, damages for non-completion of the work due to negligence on the part of the main contractor.

Liens, whether registered or not, will attach from the moment the material is supplied. No question can arise as to the prior registration of mortgages.

As having a genuine prior mortgage, the land will be deemed to have been improved to the extent of the work done and the materials supplied for the building erected upon it.

There are many other very important points, but these illustrate the improvement our Act will be upon the old one.

The Practice of Returning Surplus Material

The retail lumber business, has several things in connection with it that are peculiarly a part of it, and not attached in the same degree to any other line of merchandising. Every business has its own peculiarities which are inseparable from it and continuous in their operation. The retail lumber dealer has always had to deal with the problem of returned materials, and doubtless always will for there is no dodging it in the selling of building materials. It is fundamentally a part of the busisness. 'Tis true. Merchants in the dry goods line have a similar problem, but it is in a different form from that of the lumber dealer, and moreover largely of their own makings. Of late years the practice has grown with dry goods men in the large cities of giving as a service the permission to customers to have goods sent them from the store with the privilege of returning them if not satisfactory.

Like all such privileges, however, it has been abused to such an extent that measures have been taken by the merchants to materially curtail it, and the service is now being restricted within more reasonable bounds. In the use of building materials, it is difficult to estimate the exact quantity required in the building of a house, and the average contractor is not able to do it. He generally either overestimates or under-estimates it. More or less changes also are often made on the job that effect the quantities required. Even on barns and other plain buildings, there is either a little too much or not enough of some items. The better class of contractors can figure pretty close and though they may have some stuff left over on a job which they are finishing, they take it to their shop to work in on repair jojbs. But it is the small contractor-carpenter and the owners who buy and furnish the materials that give the dealer the most trouble in this regard.

The carpenters who make out the estimates for such owners are not particularly interested in how much is left over or fall short of their semi-guessing of the quantities. They are more apt to figure in more men are needed than otherwise, for if there is a shortage, the owner will think they didn't know how to make out the bill. So it being known that what is left over will go back to the yard, they are interested only in their reputation for getting enough in the estimate. If this class of carpenters figure to furnish for the job, they are more careful, because others are in competition with them for it, and the less material they figure, the lower they can make their bid and depend on "skinning" the job to make up for it. Some carpenters do this purposely, well knowing that the owner will have to eventually pay for the shortage.

When not furnishing for the job, the one item that carpenters like to figure a surplus is finishing lumber so they can pick out the best of it to use. What is left the dealer is expected to take back, though it is of a lower grade, often in poor condition from lying around and trod upon, stained and otherwise damaged. Flooring is another item that gets the same treatment, and often an extra door is sent back for credit that will not do to send out on another bill. Whatever molding goes out you may be sure if there is any left it will not be the best pieces. The dimension left over is generally the stuff used for scaffoldings and full of nails. And so, when the building is finished a hodge podge lot of stuff is left over. Sometimes this will lie around the farmer's place a week or more before it is returned. Warped by the sun and soaked by the rain it is a sorry looking mess. Still, for all this, the dealer is expected to take it back at the same price he sold it. Maybe he has been unwise enough to agree to do this, and also to furnish the extra items at the prices figured in the bill. Some dealers are so anxious to sell a bill they will agree to unreasonable stipulations to beat the other fellow from selling it.

Increase in Commercial Value of Sawdust

Sawdust as a waste product is a thing of the past for it now serves many purposes and has an ever-increasing commercial value, says a recent despatch from Chicago. Mixed with clay it makes good tiles and bricks and combined with concrete a good flooring material is obtained. It also finds a place in the dye industry for coloring purposes. A gas excellent both for lighting and heating purposes, can be made from sawdust. It is believed that, particularly in the neighborhood of sawmills, the gas could be produced so cheaply as to be supplied for a few cents per thousand feet.

Personal Paragraphs of Interest

J. P. Legris, of Kenora, has been appointed Forest Supervisor for Ontario.

John Levie, of W. & J. Sharples, Limited, Quebec, is in Great Britain on a business trip.

W. R. Elliott, representing the Pacific Box Co., Vancouver, was a recent caller on the trade in Toronto.

A. Fenton, assistant sales manager of the Riordon Sales Company, Ltd., Montreal, was a recent visitor to New York.

Aird Flavelle, of Thurston-Flavelle, Limited, Port Moody, B.C., spent a few days recently in Toronto and other points east.

H. Billingsley Poliwka, of the firm of J. Burstall and Co., lumber exporters, Quebec, is a patient at the Royal Victoria Hospital, Montreal.

H. C. Campbell, of the Charles H. Russell Co., Ltd., wholesale lumber, Montreal, has been on a visit to Campbellton and St. John, N.B.

A. G. Wilmot, sales manager of the East Kootenay Lumber Co., Limited, Jaffray, B.C., was in Montreal and Toronto lately calling upon the trade.

Harry Mawson, of Anderson, Shreiner & Mawson, wholesale lumber merchants, Toronto, and Mrs. Mawson, are on an extended trip to the Old Country and France.

B. H. Stewart, wholesale lumber dealer of Cleveland, Ohio, formerly of Toronto and Woodstock, spent a few days recently in Toronto calling on old friends in the trade.

D. B. Jones, of Winnipeg, president and manager of the Community Lumber Yards and of the Moose Mountain Co., dealers in hardware and lumber, passed away recently.

Philip D. Gordon, of Mason, Gordon & Co., Montreal, is on the road to complete recovery after an illness of about a month, during which he was a patient in the Royal Victoria Hospital, Montreal.

R. H. Spencer of Gill & Fortune, lumber merchants, Trenton, Ont., was honored by the Grand Chapter of Royal Arch Masons at the recent annual gathering in London in being elected Second Grand Principal.

A. M. Knox of Knox Bros., wholesale lumber merchants, returned to Vancouver recently from a month's trip to eastern Canada, where his company is largely interested. They operate a re-sawing plant at Levis, P.Q.

Frank Oliver, of the Oliver Lumber Co., Toronto, who entered the General Hospital recently and underwent an operation, is making good progress, although it will be some time before he is able to leave the institution.

E. M. Stewart, of the firm of Robert Stewart, Limited, Guelph, Ont., has returned after a lengthy trip to the Pacific Coast, where he was getting in touch with the lumber situation at first hand among the British Columbia producers.

At the annual banquet of the Board of Trade, Bathurst, N.B., among the speakers was D. Champoux of the Chaleurs Bay Lumber Co., Restigouche, N.B. Mr. Champoux is also a director of the Canadian Lumbermen's Association.

Fire broke out recently in the kitchen of the Sheffield Lunch, corner Yonge and Adelaide Sts., Toronto. The flames communicated with the private office of L. L. Brown, B. C. Lumber Commissioner, doing considerable damage to the premises. Repairs are now being made.

After serving four years as secretary to the British Columbia Shingle Manufacturers' Association, Vancouver, F. L. Nash has resigned. His retirement from the position has created widespread regret among the members of the association as he had proven himself an active official.

Captain W. R. Maxwell, of Hamilton, Ont., has been appointed first pilot of the Laurentide Company's air squadron, Grand Mere, P.Q., in succession to Lieut. Stuart Graham, who has accepted a position with Price Brothers. The Laurentide Company own three seaplanes, for forestry work.

R. F. Logan, who for several years past has been connected with Dunfield & Co., Limited, Halifax, has joined the firm of F. J. Logan & Son, 8 Prince St., Halifax. The members of the firm are his father, Hon. Fulton J. Logan, and a brother. The latter has been devoting his time nearly altogether to manufacturing, having a mill at Musquodoboit Harbor.

Fred H. Lamar, Winnipeg, Secretary of the Western Retail Lumbermen's Association, has resigned to enter the wholesale and commission brokerage business in lumber, in partnership with Chas. Sine, Calgary. Mr. Lamar states that they have the exclusive sale of the Nicola Pine Lumber Company products and also a good connection in shingles and fir products on the coast.

Many friends in Toronto and other cities in Ontario will regret to learn of the death of L. A. Kelsey of the Kelsey Hardwood Lumber Co., North Tonawanda, N.Y., who passed away recently from an attack of apoplexy. Mr. Kelsey led an unusually active life and was busy up to the moment of his death. He was a representative and highly-esteemed manufacturer and wholesaler of hardwood lumber.

James Albert Cole of North Bay, died on March 6th after an illness of several months. Mr. Cole went to North Bay in 1906 and for several years conducted a successful planing mill business. He was foreman for J. R. Eaton & Sons, Orillia, for a quarter of a century and for the past year was superintendent for A. J. Young Lumber Co., North Bay. Mr. Cole leaves a wife and two daughters.

W. R. Elliott, of Windsor, Ont., has returned from an extended trip to the Pacific Coast. While in Vancouver Mr. Elliott was appointed eastern representative for the Apex Lumber Co., Ltd., and has formed a partnership with his brother, James Elliott, who returned with him to handle the agency. Mr. Elliott found conditions in the lumber industry out west on a sound basis, and believes that it will not be long before a decided improvement will be seen.

Edward W. Conners of the James W. Sewall forest engineering office, Old Town, Maine, and Washington, D.C., is in New York and Boston making calls on land owners and operators in the interests of the Sewall organization. Mr. Conners reports that general sentiment is optimistic for the future in both pulpwood and lumber, although present conditions are quiet. Another of Mr. Sewall's men who recently returned from an extended trip through the south reports much the same quiet confidence in a coming well-sustained business.

Wm. Clarke, 39 Beatty Ave., Toronto, passed away recently in New York where he went several months ago to seek special medical treatment. He had been ailing for some time. The late Mr. Clarke was, in his earlier career, in the contracting and building business in Toronto. In later years, in partnership with his brothers, he formed the Gulf Pulp & Paper Co., located at Clarke City near Seven Islands on the Gulf of St. Lawrence. The mill has a capacity of about 150 tons a day of groundwood pulp. The brothers had acquired extensive timber limits in Quebec, and in founding the pulp mill, exercised much foresight and confidence in the future of the industry. Clarke Bros. some time ago sold their holdings to the Northcliffe interests of London, England. The late Mr. Clarke was a life-long resident of Toronto, was highly respected and leaves a wife, four sons and one daughter.

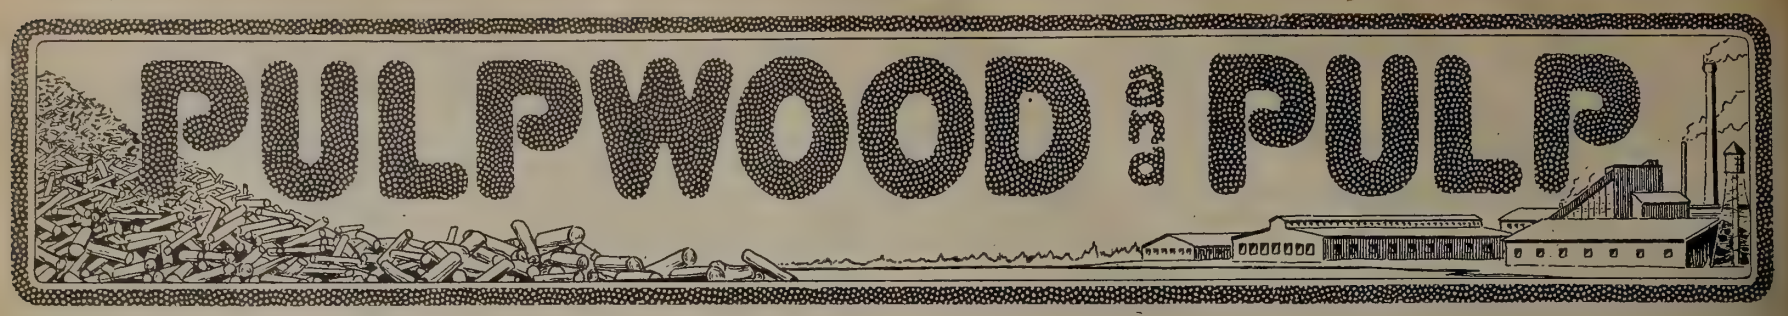
Joins His Brother in Timberland Company

One of the brightest of the many able young men who are devoting their energies and talents to the lumber industry in the west, Mr. A. T. Robson, has changed his field of activity somewhat and is now to be found as sales manager of the Timberland Lumber Company, Ltd., at the old Royal City on the banks of the Fraser River, New Westminster, B.C. Mr. Robson had possibly an extra incentive to make the change because of the fact that he has been on the board of directors of the company since its formation and the building of its mill on the south bank of the Fraser. Also, his brother, Mr. J. G. Robson, is president and general manager,—and in fact the whole works, so A. T. avers — of the Timberland Company, which makes for a pleasant association as well as close harmony in conducting the business.

Mr. A. T. Robson until the end of 1920, was manager of the Associated Mills, Ltd., of Metropolitan Building, Vancouver, B.C., the selling organization representing the combined output of seven of the leading mills of the mainland coast. That position he filled from the inception of the Associated Mills, and much of the success which has met the efforts of that organization has been due to his capable handling of the selling campaign the company carried on. Mr. Robson severed his connection with the best of relations still existing and his successor is now in charge in the person of Mr. A. J. Bannerman, who had been for some time his assistant. Mr. Bannerman is well known to the lumber trade in the Mountain districts, where he spent a number of years before coming to Vancouver.

Re-opening of many logging camps which have been closed since November 30, relieving Vancouver of a large proportion of its unemployment problems, has been announced. It is said that 4,000 men will be given work.

The Laurentide Company, of Grand Mere, Que., have purchased 404 square miles of timber limits in Saguenay County, 145 miles below Quebec city. These contain about 1,500,000 available cords of pulpwood, and this season 10,000 cords will be cut. The pulpwood will be shipped first on barges to St. Augustin, twenty miles from Quebec, then shipped by National Transcontinental to the Black River, and thence by water down to the Laurentide mills.



Systematic Cutting of Quebec Timber

The Chicoutimi Pulp Company of Chicoutimi, Que., has made a request to the Hon. Honore Mercier, Minister of Lands and Forests, asking him to inaugurate with the co-operation of his department an inventory of the province's forests, so as to organize its wood-cutting. With this system, the engineers of the department and those of the company will prepare a programme of lumber cutting for a number of years, showing the location and the quantity of timber to be cut down each year. This cutting will be done according to what is thought best to preserve the forest and leave it with an increased value, instead of destroying it.

By this system the company will only be able to exploit each year wood equal to the new production of the forest; in other words, only the interest on the whole forest can be consumed.

The Laurentide and several other companies are to apply for the same co-operation by the department.

* * *

New Pulp Plant for Prince Rupert

Application was made recently to the city council of Prince Rupert by E. F. Duby on behalf of the Prince Rupert Pulp and Paper Co., Limited, for a free supply of water and a fixed rate of taxation for fifteen years as an inducement to that concern to establish a pulp mill at Seal Cove within the city limits.

This is the company recently incorporated to take over the Emerson mill together with a large block of timber limits with the purpose of establishing a pulp and paper plant in or near Prince Rupert, the understanding being that if no privileges are granted by the city the plant will have to be established outside.

The lumber mill was established at Prince Rupert three years ago by the late J. S. Emerson, but for some time past has been under the direct charge of his son, John Emerson, of Vancouver, with Mr. Duby as manager. The new concern is capitalized for four million dollars. The sulphite mill proposed will have a capacity of fifty tons a day, and will be the first unit of a larger concern to include a big paper mill.

* * *

Would Regulate Cutting in Quebec

Hon. Honore Mercier, Minister of Lands and Forests for Quebec, has received a request from the Chicoutimi Pulp Co. of Chicoutimi, asking him to inaugurate with the co-operation of his department, an inventory of the province's forests so as to organize its wood-cutting. With this system the engineers of the department and those of the Chicoutimi Company would prepare a programme of lumber-cutting for a number of years, showing the location and the quantity of timber to be cut down each year. The cutting will be done according to what is thought best to preserve the forest and leave it with an increased value instead of destroying it.

It is interesting to note that by this system the company will only be able to exploit each year wood equal to the new production of the forests or, in other words, only the interest on the whole forest can be consumed. The Laurentide and several other companies are also applying for the same co-operation of the Department of Lands and Forests for Quebec.

Pulpwood Production May Be Curtailed

Speaking of the pulpwood situation, the present market conditions, prices and outlook for the coming year, it may be said that the pulpwood production in Canada in 1920 was in much larger volume than usual, owing to the high prices prevailing. In the fall there developed a general industrial depression, which naturally made itself felt sooner or later in the paper and allied industries. The mills in New York and other states greatly curtailed production and the demand for pulpwood was suddenly eliminated. As a result stocks accumulated in large quantities in the producing territories, including what was already at the sidings when the requisitions ceased. Considerable wood has been hauled to the sidings during the present winter and is there waiting shipment.

"The lack of orders on the part of the mills at the present time and the financial pressure on the producers to realize on their pulpwood stocks has naturally brought about serious adverse effects in pulpwood values for the time being," says a well-known traffic manager of a leading pulpwood company.

"Obviously such values at the production end will continue to be so affected until such time as the surplus stocks have diminished, and the demand for paper has increased (coincident with the liquidation of warehouse and mill stocks on hand) to the extent of equalizing or exceeding the available supply. How long this liquidation process will consume is, of course, problematic.

"The fact remains, however, that, as a result of natural economic forces, the pulpwood producers, who have invested in a large cut for shipment this season, must sacrifice an appreciable percentage of their value. This applies particularly, of course, to the smaller producers. The larger producers, who have already contracted for a substantial proportion of their production at covering prices, and who are able to finance the balance until such time as the demand is increased are, of course, better able to protect the intrinsic value of their production, considered from the standpoint of operating cost.

"In our opinion, the result of the present slump in values, as affecting the small producers, will be largely to curtail this next season's production. Consequently, there will be a substantial shortage available for shipment next year in the fact of an increased demand, brought about by the undoubted improvement in the general industrial situation which will have taken place by that time, thereby causing another period of high prices."

* * *

Much Canadian Pulpwood Consumed

Writing to the "Canada Lumberman," George B. Oberton of Canton, N.Y., says the local prices for pulpwood in this locality are $20.00 per cord for hand-peeled spruce at the bank of river. The wood is cut 16 feet long, hand-peeled and mixed runs 80 per cent. spruce and the rest, hemlock and balsam, which sells at $1.00 or $2.00 less.

"In regard to the supplies we get from Canada, we will say that taking the group of mills on the Black River from Carthage to Dexter, N.Y., inclusive, it is quite safe to say that 75 per cent. of the wood that is used in these plants comes from Canada."

The outlook for newsprint is good. There is no doubt that pulpwood in the years to come will be more expensive and paper will follow pulpwood prces.

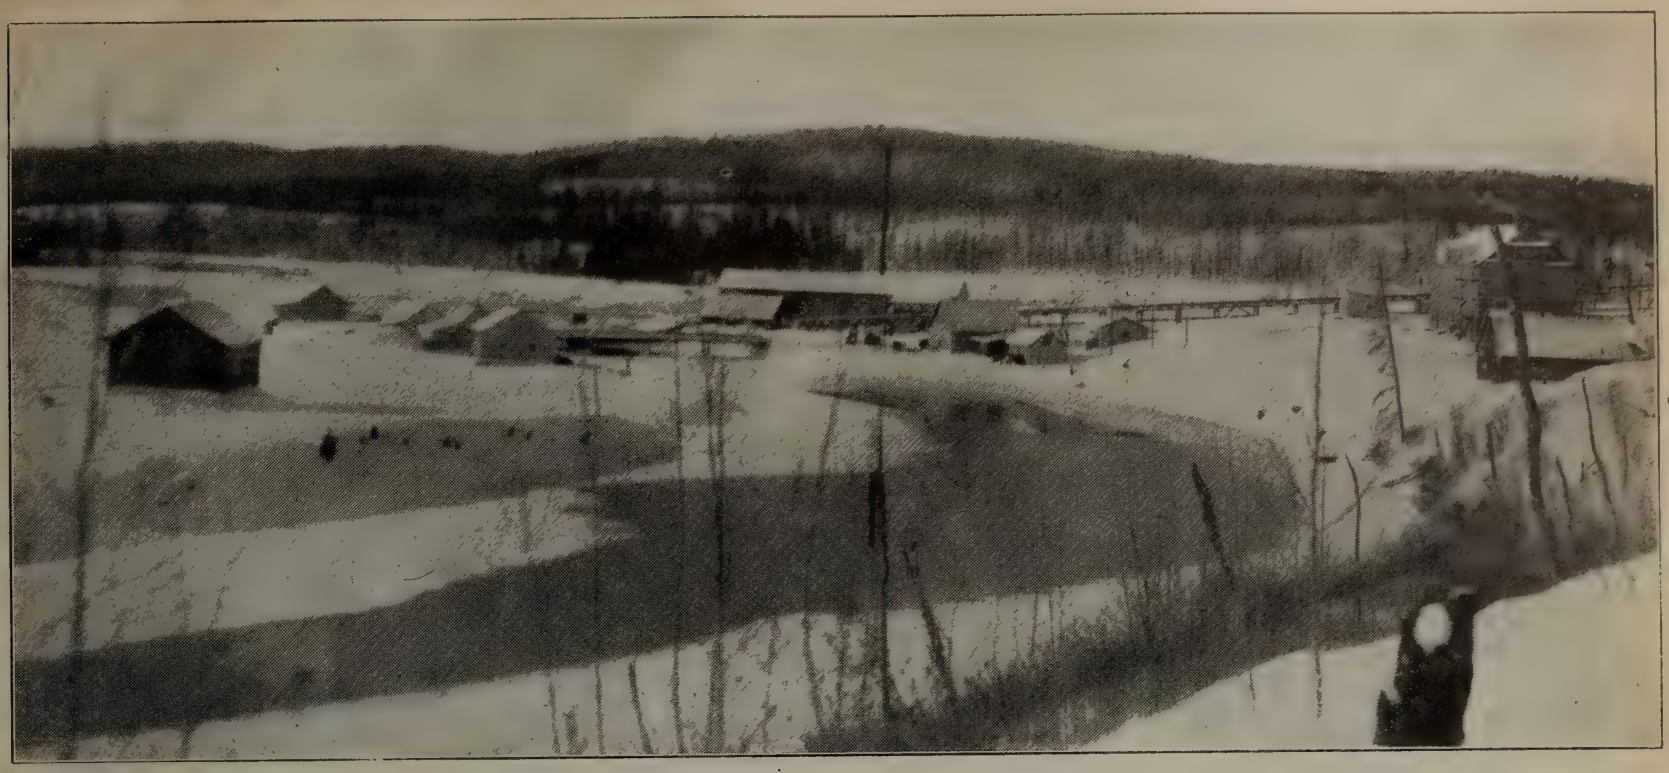
* * *

Too Much Pulpwood Exported

In Quebec political circles it is said that the Quebec Government is alarmed at the enormous quantity of pulpwood exported from the province to the paper mills in the United States, and that Premier Taschereau has under consideration a government bill to be brought down during the present session of the legislature, dealing with this question. It is said that it is the intention of the Quebec Government to place an embargo on pulpwood from the province of Quebec into the United States. The Prime Minister, who has been giving this question serious study, does not see why Quebec raw material should be transported to a foreign country for manufacture into the finished product at the expense of the resources of the Quebec forests, and the people. He has in mind that the finished article should be manufactured at the base of supply, and if the United States paper manufacturers desire Quebec wood, they should erect their mills in the province of Quebec and thus give Canada and the Canadians the benefits of the profits that are accrued from the heritage of Canadians. Should the American paper manufacturers come to Quebec and erect mills, they will be treated with all the fairness that is given Canadians at home industries.

It is said that Premier Taschereau is also considering legislation on the same basis in regard to the export of Canadian asbestos. The province of Quebec produces and supplies 85 per cent. of the raw asbestos shipped to the world, and he aims that the raw product shall be developed and manufactured into the finished product at the base of supply.

Hon. Mr. Taschereau, who is a tireless worker, is at the same time a thorough patriotic Canadian, who believes that Canada has passed the age of wearing swaddling clothes, and is old enough in age, experience and scientific capability to take care of herself, and be independent of any and all foreign countries. Possessed of the greatest possibilities in raw material, she can and must establish



The Laurentide Company's logging depot at Gatico, Quebec, 200 miles from Grand Mere, one of its most important stations. The log conveyor is at the right with the engine house in the centre. The conveyor can load 28 cars daily and the company expect to move 40,000 cords this summer. The cut is presented in this issue through the courtesy of "The Digester."

her own manufacturing interest, and henceforth depend on the energy and brains of the Canadian people. Mr. Taschereau is proving himself an able administrator and fast gaining the confidence of the people.

* * *

How B. C. Forest Wealth Grows

The total value of forest products of British Columbia for 1920 is placed at $92,628,807, against $70,285,094 for 1919, according to annual figures made public to-day by Hon. T. D. Pattullo, Minister of Lands.

Last year's total is practically twice the total of the forest production of the province three years ago, the minister points out.

The value of the lumber cut has advanced by nearly $16,000,000 over last year, while the increase in the value of pulp and paper produced amounts to more than $9,000,000.

"The pulp and paper output again shows an increase, both in volume and value, compared with the previous year," said Hon. Mr. Pattullo, in making public the returns.

"During the year the department has had many enquiries regarding pulp and paper possibilities of the province and a very considerable increase in capacity in this industry is looked for."

* * *

Pulpwood Pile Nearly 500 Miles Long

The pulpwood cut of Northern Ontario last year would, if gathered together, stretch out in a line four feet high from Iroquois Falls to Toronto, so Public School Inspector Wilson told the pupils of the Haileybury High School recently. The distance between the points mentioned is approximately 460 miles. Pulpwood is cut in four-foot lengths.

* * *

Urges Conservation of Pulpwood Stocks

"What the Pulp and Paper Industry Means to Ontario," was the subject of an address given by Mr. Edward Beck, of Montreal, at the annual dinner of the Foresters' Club of the University of Toronto recently. The industry represented a capital investment of $95,281,040 and a total of 38 establishments in Ontario, he said.

Something of Ontario's pulpwood resources, their consumption and the means that were being taken to replenish the stocks were outlined by the speaker. The estimated annual consumption was 1,200,000 cords, and allowing for all waste, it was estimated that the present supply may last for sixty or seventy years.

In 1919 Ontario produced approximately 498,792 tons of paper of all descriptions, 246,430 tons of chemical pulp and 351,572 tons of mechanical pulp, or approximately 50 per cent. of all the paper, 34 per cent of the chemical pulp and 35 per cent. of the mechanical pulp produced in Canada. The value of the paper produced in Ontario amounted to $39,930,474, the largest item being 342,254 tons of newsprint, valued at $23,958,566.

Against the practise of exporting unmanufactured logs, the speaker uttered a word of warning. The United States was confronted with the necessity of stopping the practise and Canada would have to follow in their footsteps. "We are just as tardy as they have been in coming to a realization of the limitations of our forest wealth, and to a knowledge that we cannot continue indefinitely slaughtering and wasting our forests without an intelligent effort at renewal and replacement unless we want to encounter ruin," Mr. Beck said.

* * *

Pulpwood Men Object to High Freights

The lumber and pulpwood interests of the Abitibi district on the line of the Transcontinental Railway are up in arms against the excessive charges that are bing imposed by the C. N. R. management on transportation. A deputation, composed of some thirty settlers from Amos and Abitibi, arrived in Quebec recently to interview Sir Hormisdos Laporte, vice-president of the C. N. R. Board of Directors, respecting the high cost of freight on lumber and pulpwood being charged on the Transcontinental Railway, which is calculated to ruin the wood business. The Abitibi District, which was a wilderness some five or six years ago, is now peopled by 15,000 new settlers, who have been encouraged to settle there by the Quebec Superintendent of Colonization, and have done wonders in the development of that northern section of the province within such a short period of time.

The makers of pulpwood complain that they are charged $9 per cord by the railway for its transportation to the paper mills at Three Rivers, and $10 per cord to La Tuque, and owing to the drop in the price of pulpwood, only receive $16 from the mills for their product. They request that the rate of freight charges be reduced by one-third; otherwise they will be forced to stop making the wood.

The executive officers of the Quebec Board of Trade formed part of the deputation that waited upon Sir Hormisdos Laporte, and in a memorandum read, backed the Abitibi deputation in their demand. Mr. Norman Brown, of the Brown Corporation, with mills at La Tuque, informed the vice-president of the C. N. R. Board of Directors, that unless the railways came down in their prices of transportation, the pulp and paper mills would have to stop rail shipments, and obtain their supplies by water. He pointed out that Norway and Germany were now supplying paper to the United States for 2½c per lb., which was a vital factor which the Canadian mills would have to contend with, and unless the railways curtailed their prices for transportation, they would lose the haul of freight.

Sir Hormisdos Laporte expressed his sympathy with the Abitibi settlers, and, though he offered no encouragement as to an amelioration of their grievance, said he would place the matter before the next meeting of the C. N. R. Board of Directors. He pointed out the difficulties the railways were meeting with these days to overcome the exigencies of deficit and the intention of the C. N. Ry. executive in its new schedule to cut off train services that were not paying expenses. He instanced several trains on the Transcontinental Railway and the Canadian Northern running from Shawinigan to Quebec.

The Lake Jolly Mills of Clarke Brothers, Limited, Bear River, Nova Scotia.

Hardwoods Used for Clothes Pins and Dowels

During the season of 1919-1920 the lumbering activities of Clarke Brothers, Limited, of Bear River, N.S., were confined principally to hardwood, to be used in the manufacturing of clothespins and dowels. The total cut amounted to approximately two million feet, from which were produced about sixty thousand boxes of clothespins—5 gross each—and two million hardwood dowels.

In addition, a small cut of exceptionally high grade pine was made, totalling about three-quarters of a million feet.

These hardwood products are manufactured at the Lake Jolly Mills, about nine miles from Bear River. Transportation between the two points is carried on by means of motor truck, and at Bear River the dowels and clothespegs are shipped on the steamer "Bear River," which is also owned by the company, for transportation to St. John, N.B., at which port direct ocean connections are obtainable for all the leading United Kingdom, West Indian and Australian ports. At Bear River ample warehouse accommodation is available for the accumulation of large shipments.

The forest policy of the company for the next few years will be largely one of conservation. No more soft wood will be cut and hardwood will be logged as a by-product for the purpose of increasing the acreage available for the growth of soft wood.

It is anticipated that the timber requirements of the new kraft pulp mill which is now nearing completion will be provided for by neighboring timber limits for the next ten years at least.

At the end of this period the timber limits of Clarke Brothers will have been rejuvenated so as to permit of their supplying the needs of their pulp mill indefinitely.

The capacity of the mill will be fifty tons a day, and it is the only kraft mill in Canada located at tidewater with an open port all the year round.

Big Increase in British Columbia Timber Sales

The value of timber sold on Crown Lands during 1920 is estimated at $1,799,039.03 as against $654,372.99 in 1919, or nearly treble the amount of the previous year. Some idea of the growth of the timber business of the Forest Branch is gathered when one notes that the total for 1916 was but $259,769.12.

That the value is not entirely due to increased stumpage and royalty is evident from the fact that the total acreage covered by new Timber sales was 121,690 as against 61,809 acres the previous year and only 23,318 acres in 1916.

The largest gains are shown in saw-timber with 440,649,755 board feet, as against 245,209,300 feet in 1919 and 136,345,000 feet in 1916; in posts with 149,300 as against 5,000 in 1919 and none in 1916, and in railway ties with 6,415,349 as against 957,804 in 1919 and 92,000 in 1916.

594 sales of Crown Timber were made in 1920, against 356 the previous year and 133 in 1916.

This enormous increase of business entails much extra work on the Forest Branch of the Province.

Appended is detailed statement of Timber Sales for the past five years.

B. C. Timber Sales Awarded by Districts

	No. of Sales	Acreage	Saw-timber (Ft. B.M.)	Poles & Piles (Lineal ft.)	No. of Posts	Shingle Bolts & Cordwood No. of Cords	Now of Rly. Ties	Estimated Revenue.

Wholesalers Consider Many Timely Matters

Coming Conference of Industry on Sales Tax Problem—Committees Appointed for 1921—Ample Food Supply for the World for Many Years to Come

At the regular monthly meeting of the Wholesale Lumber Dealers' Association, which was held on February 28 at the Albany Club, Toronto, there was a large and representative attendance. A. E. Eckardt, chairman, presided, and a number of important matters came up for discussion. A communication was read from the National Wholesale Lumber Dealers' Association, which will hold its annual convention at the New Drake Hotel, Chicago, on March 29 and 30, extending an invitation to the members of the Toronto association to attend. R. McDonagh announced that it was his intention to take in the Chicago gathering. A motion was unanimously passed to the effect that H. Boultbee, secretary of the Wholesale Lumber Dealers' Association, be sent as a delegate from that body.

Standing Committees for Year

It was announced that the standing committees of the association for the year had been appointed as follows:—

Transportation—A. E. Clark (chairman), D. C. Johnston, R. Halliday.

Trade Relations—F. H. Bigwood (chairman), W. C. Gall, R. G. Chesbro.

Admission and Membership—J. P. Johnson (chairman), H. J. Terry, R. McDonagh.

Bureau of Information—H. G. McDermid (chairman), G. E. Spragge, Frank Kent.

Fire and Marine Insurance—A. E. Cates (chairman), W. C. Laidlaw, Alex. Read.

Arbitration—J. B. Jarvis (chairman), E. C. Parsons, F. Horning.

Legislation—A. C. Manbert (chairman), A. E. Gordon, J. L. Campbell.

Inspection—Alex. C. Gordon (chairman), Maurice Welsh, John McBean.

Audit and Finance—W. J. Lovering (chairman), W. A. Walker, J. L. MacFarlane.

Terms of Sale—A. H. Leak (chairman), C. G. Anderson, Hugh Rose.

Entertainment—A. K. Johnson (chairman), D. C. Johnston, D. Barclay.

Committee on Attendance—H. G. McDermid (chairman), W. A. Walker, Maurice Welsh.

Change Suggested in Sales Tax

A. E. Masuret, of Toronto, who represents Tomlinson & Mitchell, of Winnipeg, wrote Mr. Eckardt, the chairman, calling attention to the advisability of the Wholesale Lumbermen's Association sending a delegation to Ottawa to act in conjunction with the wholesalers from the Coast, Winnipeg and Montreal. The main object of the meeting was to interview Sir Henry Drayton to have him make certain changes in the sales tax. F. H. Mitchell, chairman of the Sales Tax Committee of the Winnipeg Lumbermen's Association, on February 18 wrote Sir Henry Drayton, Minister of Finance, Ottawa.

The communication of Mr. Mitchell called attention to the fact that Sir Henry had wished the wholesalers to consider a suggestion re sales tax, viz., that all manufacturers pay 2 per cent. on their turnover and all wholesalers pay 1 per cent. The wholesalers of Winnipeg went on to state that as far as they were concerned, they could not pay 1 per cent. on the turn-over for the reason that their net percentage of profit on turn-over runs about 1.5, and, consequently if they had to pay 1 per cent., it would take about 75 per cent. of their net profits and leave them practically nothing in the way of net profits. Continuing, Mr. Mitchell, on behalf of the Winnipeg Lumbermen's Association, said: "We cannot see after a thorough discussion in our Wholesalers' Association here, that by having the manufacturer pay 2 per cent. and the wholesaler pay 1 per cent., that the wholesaler would be at all benefited, as the 1 per cent. would come out of our profits. In view of this, we cannot but see our complete elimination from business if the tax is applied as suggested by you."

The Winnipeg association also pointed out that the wholesaler works on such a small margin of profit that a 1 per cent. tax on turnover could not possibly be paid by him. The wholesaler has to sell at the same market price as the manufacturer, and it is impossible for the former to add any tax in his price for the reason that he could not get the retailer to pay any more than the mill price would be, and with the mills now being able, under the act, to assume 1 per cent. of the tax, it could readily be seen that the proposal of the Finance Minister places the wholesaler in an unfair position as to competition.

The communication concluded: "We might suggest that if the Government gives the lumber wholesaler who does not carry any stock but buys and sells in car lots only, a classification of wholesale lumber agents, it would take us out of the list of those under the present act, who have to pay the sales tax, and consequently relieve us of the 1 per cent. which we now pay."

Hold Conference on the Subject

A. E. Clark, of Toronto, first vice-president of the Canadian Lumbermen's Association, wrote, calling attention to the conference that had been held between the Finance Minister of Canada and the Winnipeg Wholesale Lumbermen's Association in regard to the sales tax problem. Mr. Clark said: "In view of the fact that a great many organizations are sending in statements to the Minister on the tax problem, which might conflict, I offered a suggestion to the Montreal trade recently that the Canadian Lumbermen's Association and all the other organizations and lumber interests in Canada send representatives to the meeting to discuss this question in its entirety and prepare a statement to present to the minister. The Montreal lumber trade has passed a resolution along this line."

The matter was thoroughly discussed by the members present and a resolution was carried along the line suggested by Mr. Clark, being moved by A. C. Manbert and seconded by A. E. Gordon. It was to the effect that the Wholesale Lumber Dealers' Association of Toronto was in sympathy with the proposal for a conference to be held under the direction of the Canadian Lumbermen's Association and that the secretary of the C. L. A. be so notified.

Wants Stamp Tax Abolished

The following was moved by Hugh A. Rose:—Resolved that this association is opposed to the Graduated Stamp Tax on trade acceptances for the following reasons:—

(1) Drafts are often unaccepted through some little differences arising, and accepted drafts are returned unpaid at maturity date with the stamps cancelled without any resultant benefit. It is frequently found necessary to re-draw time and again with new stamps attached before payment of the original account is realized.

(2) An excise tax has already been paid on the transaction which the draft covers, and the Stamp Act therefore becomes a second tax on the merchandise.

(3) The amount of revenue derived by the Government is small in comparison with the irritation and trouble that the tax causes.

(4) The continuance of the tax has a tendency to do away with the present method of collecting accounts by trade acceptances which have been recognized as a strong factor in Canadian banking and have given great satisfaction to the trade and commerce of the country.

After some discussion the matter was referred to the Legislation Committee.

High Freight Rates Discussed

E. C. Parsons read a letter which he had received from the West. It was to the effect that the C. P. R. had had a man investigating lumber trade conditions in Ontario with a view to attacking the statements made by the Railway Committee of the B. C. Lumber Association that yellow pine was now displacing fir in the Ontario market because of the present high freight rates. The letter concluded: "Now we wish that you would make up for us a statement, showing just what price yellow pine is being sold for to the trade that have been buying our common lumber, and if you could get letters from any of these people, showing that they are now buying yellow pine because of the increased cost in the freight rates on fir, it would be very good information for us to have."

After some discussion it was decided that the association should not take any action at the present time in the matter of railway freight rates as they affect Ontario and the east, but wait until the result of the agitation in the west against the present high carriage charges is definitely known.

The Food Supply of the World

Prof. G. A. Cornish of the College of Education, University of Toronto, spoke on "The Food Supply of the World," and treated the topic in an interesting and original way which was much appreciated.

He said that this question had first come prominently to the front during the great war when so many nations were fighting instead of producing. There had been regulation of the supply of the things that we eat in the interest of conservation and the success of the Allies. With the increase in population of the world there naturally had to be development of the food supply. Predictions had been made in the past that the supply would give out and one authority had set the time at one hundred years, but the number of inhabitants on the globe had multiplied many times and there was no immediate or remote danger, so far as the speaker was able to discern, of a famine in any line of foodstuffs. Prof. Cornish told of how the Eskimo gets his light, heat, clothing and food from one animal and that was the seal. The food supply of the world, of course, depended on vegetation. On the latter three things depended, the amount of warmth, the amount of moisture and the character of the soil. The first two were most important, as where they existed, the soil generally produced abundantly. The densest forest existed in those parts of the world where there was the greatest rain fall. In China three thousand people lived to the square mile, and in Japan, which country was smaller than Great Britain, and with only one-tenth of the soil cultivatable, a population of sixty-two million people flourished. There, two or three acres cultivated with intensity and producing two crops a year, yielded more on the average than twenty or thirty acres in Canada. In the Dominion much of the land was not half cultivated.

It was estimated there were in the United States and Canada 100,000 square miles of swamp land which could easily be drained and produce crops double to that of the ordinary arable land. The speaker touched upon the necessity of making agriculture more intensive and extensive. He referred to the wonderful possibilities opening up in Siberia and how by pushing into the dry belt available quantities of food could be augmented. Scientists had done the most to improve our food supply in the production of new varieties by the breeding process and the process of selection in both plants and animals. In this relation the expansion of the sugar beet industry was called and the development and propagation of the rubber plant, which had in fifteen years, increased the world's supply of rubber, at least, one hundred times what it was. Thus the work of the scientist in hunting out new plants to be brought under cultivation and in the creation of certain substances, chemically made, was proceeding steadily.

By the synthetic process, indigo and camphor had been produced in abundance in laboratories. No longer was the world dependent for these upon the blue coloring matter obtained from the stocks of the indigo plant and upon the whitish substance with a bitter taste and pungent smell, which came from the camphor trees. As these trees were cut down there was more land available for the supply of food. Prof. Cornish in passing observed that it was within the realm of possibility that wood waste, chemically treated, might be used as food for animals in the future. In the temperate zone more was raised from trees than grass or herbiage. The nutritive value of trees were not fully known. As yet little had been done in such exploitation, but there was much more which might be done. At the present time we were not consuming half the food of the sea. There were many varieties of fish which were not used either through ignorance or prejudice.

In the tropics there was intense fertility and rapid growth and many kinds of trees flourished while a great number of the finest cabinet woods, in the rich valley of the Amazon, were as yet untouched. The speaker ventured the assertion there was more timber there in a single acre than could be found in several thousand square miles in Northern Ontario. As time went on it appeared as if we would have to look more and more to the tropics for our food requisites as the countries of temperate zone would go more and more into industries. The tropical zone was not a white man's country. While the population of the world had possibly doubled in the last hundred years, the food supply in that time had increased seven or eight times. To produce food there must be fertility of soil created and sustained in the way of fertilizers, and here again science had come to the rescue.

The speaker closed with a review of what had been done in this direction by the scientist and said that when a want had arisen in the world, man had always been able to meet it. From an economic, productive and every other standpoint, Prof. Cornish declared that there was little to fear regarding the future food supply of the inhabitable globe.

At the close Chairman Eckardt expressed his thanks to the speaker for his able and lucid address.

J. J. Linehan of the Mowbray-Robinson Co., Cincinnati, Ohio, was called upon for a few remarks. He conveyed his greetings and expressed pleasure at the interesting character of the meeting.

Answering Criticisms of Lumber Business

As a result of the depression in the building field, which has affected adversely the lumber industry and others, a meeting was held in Chicago early in the new year under the auspices of the National Lumber Manufacturers' Association to discuss plans for the revival of building, says "Class."

It is now announced that the association has completed plans for advertising in behalf of the entire lumber industry, and will shortly put into effect a campaign which is intended to stimulate construction work and relieve the housing shortage. In addition, it is hoped that institutional advertising of lumber will create good-will for the industry and all of those engaged in the manufacture and distribution of the product.

The advertising is intended to dissipate the criticisms that have been leveled at the lumber business in the past few years as the result of increases in the price of various kinds and grades of lumber. It is pointed out that prices have now declined to a large extent, and that the high cost of building is not the result of lumber price conditions. A better attitude on the part of the public toward lumber and its use in building is hoped for as a result of the advertising.

The amount which is recommended will be raised for lumber advertising is approximately $400,000. This is based on a contribution of two cents per thousand feet of lumber manufactured in 1920 by members of the associations making up the national body. The approval of the recommendation by all the associations of softwood and hardwood manufacturers is believed to be assured, so that there is little doubt of the campaign going through as planned.

All types of advertising mediums will be employed in the proposed campaign. The lumber papers are already being used to spread the news of the campaign throughout the industry and inject courage and "pep" into everybody connected with the business. In addition to newspapers and farm papers, industrial and business papers in practically all fields where lumber is used will be employed on a liberal scale.

In connection with the revival of building, which it is conceded is dependent to a large extent upon the attitude of other manufacturers of building material and of labor, it is hoped that the efforts of the lumbermen will lead to similar undertakings in allied lines, so that all of the interests concerned with the situation will play a part in bringing about a revival of building. One of the factors which may be affected by public opinion is the present insistence of some of the labor unions on the maintenance of the high level of wages which were established during the war.

The campaign was launched with page announcements in the lumber trade publications directing their attention to the possibilities of the farm market at this time with expert dealer helps.

"The Farmer is the Buyer! Go Get 'Im!" is the heading of this copy, which described the plans which have been completed for advertising to farmers and developing increased building activity on the farm, where new buildings of all kinds are needed as a result of inactivity in construction work during the past few years. The fact that the farmer can supply much of his own labor is one reason why this field is believed to be a logical one for prompt action.

The retail dealers have been asked, through the trade paper advertisements, to co-operate in a "Build Now" campaign by the use of copy prepared by the association for insertion in the local newspapers. In connection with the plans of the national body to assist the dealer move the stock, the following slogan is being used: "We'll help sell for you before we try to sell to you."

An interesting thing about the present campaign, the first undertaken for lumber as such, is that it was suggested as long ago as 1911. Two years before that the Southern Cypress Manufacturers' Association and the Gum Lumbermens' Association undertook individual campaigns for their own woods, and members of these pioneer lumber advertising bodies are among the leaders in the new campaign.

Picturesque Logging Methods on Pacific Coast

Close-up View of Many Interesting Stages from Cruising the Stand to Piling the Product Interestingly Described by Lively English Visitor

Having spent some time at three of the principal logging camps in British Columbia, it has occurred to me that a close-up picture of the many interesting stages from "cruising" the "stand" in the natural forest to connecting the timber at the sawmill might be of interest, says A. D. Webster, in the "Timber News" of London, Eng.

The Canadian lumber industry is one of the oldest and most important, and as Great Britain is the largest consumer of timber, she has therefore a keen interest in what Canada is able to accomplish in the matter of lumber production. Having secured the cruise from the Government, the first procedure is to get an estimate of the quantity and quality of timber on the stand that it is proposed to cut, this being carried out by what is known as a "cruiser" or trained forest engineer, whose duty it is not only to estimate the quantity and quality of timber, but to advise on logging conditions generally and also to furnish a topographical map of the tract to be stripped of its merchantable timber. Estimating the quantity of timber may be carried out in several ways, the usual procedure being to mark off an acre or part thereof in several districts of the forest, and by count- the number of merchantable trees and taking an average of their dimensions a fair estimate can be arrived at. In other cases the cruiser by dint of long experience and a practised eye can make a fairly accurate mental calculation of the contents of the trees over a given area, for the diameter and length of a log being obtained reference to the log book, with which the measurer is provided, shows the number of board feet that it contains, while flaws, crooks, knots and other defects are noted at the same time. Aided by the cruiser's report the foreman or ganger and contractor will carefully survey the ground and draw out a sort of working place for felling, skidding and hauling the trees, at the same time noting the best position for camp and roadways.

The location of the camp and its several buildings, which usually consist of brick houses, cook shop and food stores, dining-room, office, stables, tool house and a blacksmith's shop must be with special reference to a dry and sheltered situation, general accessibility, water supply and situation, as well as being within easy reach of operations. The buildings are single storey, constructed of timber that is usually sawn on the sopt, the roof being of cedar shingles, any cracks between the boards being rendered weather-proof by using strips of tarred paper. The dining tables and benches are of stout planking, the former being neatly covered with white wax cloth, while suitable cupboard accommodation is provided around the room.

Miscellaneous Collection of the Logger

In the camp stores will be found a miscellaneous collection of such necessary outfit as loggers' spiked boots, overalls, socks and gloves, all being specially designed for the rough wear and tear to which they are subjected, while the tool house and saw-sharpening sheds are well equipped with the most modern and up-to-date requirements. The cooking or camp kitchen is usually separated from the dining or eating room, while the brick houses with their comfortably-fitted interiors, the beds whether of wood or metal, usually the former, being as well as the racks for clothing, arranged around the room. In most of the larger camps, notably that of the Capalino Lumbering Co., there are single and married quarters, very comfortably arranged and fitted, and after with plant decorated windows and borders of flowers. Food is of the best quality and most varied description, abundant and served to the minute; indeed, fortunate is he who is invited to share a logger's meal.

The whole of the lumbering gang, which, according to the extent of logging operations, varies from 80 to 100 men, assist at clearing the camp site, erecting the buildings, providing water supply and constructing suitable roadways, after completion of which a general sub-division of the men takes place, one gang being allocated for tree felling, another for skidding and haulage, while another is erecting the necessary cables and placing the donkey engines in position for removal of the trees from the forest. In felling the trees usually two sawyers and an axeman form a gang, the latter, who is known as a "notcher," preceding the sawyers, and after carefully deciding in which direction the tree should fall, cuts out a deep notch on that side of the stem, usually at a distance of 5 ft. or 6 ft. from the ground. In order to do so a smaller notch is first cut out, about 10 in. deep and at 2 ft. or 3 ft. from the ground level, into which a spring board, which is simply a maple plank 5 ft. long and 15 in. wide, shod at one end with iron, is inserted and on which the axeman stands when cutting out the deeper notch. The sawyers work from the opposite side of the stem towards the bigger notch until the tree crashes to earth, iron wedges, if found necessary, being inserted to keep the saw from jamming. Branches are first removed, after which the tree is sawn into pre-arranged lengths. From five to seven trees of fairly large dimensions are considered a fair day's cut for each gang of three, but much will depend on situation and condition of the trees.

Daring and Spectacular Feat

Removing the top of a tree at 150 ft. from the ground, called "top rigging," is one of the most daring and spectacular feats that the lumberman is called upon to carry out, and one that requires the utmost sangfroid and a nerve of iron that is possessed by few. With a climbing stirrup attached to each leg and a strap around his waist to which a saw and axe are attached, the top rigger mounts the tree and at the desired height makes himself secure by passing the body belt around the tree. After due consideration and the most careful manipulation and undercutting, so as to avoid cleavage of the stem after the top falls away, which would be sure death to the operator, about 50 ft. of the tree top bends gradually away from the trunk and falls crash to the ground 150 ft. below. Top rigging is only necessary where a high load for sky-line haulage is adopted.

Removing the logs by the skidways, which are formed by placing 10 ft. lengths of poles 4 ft. apart on the previously cleared roadway, to the main or principal road and thence to the waterside or other loading station, is the next operation, which, in most modern camps, is carried out by the employing of steam power machinery for feet and inches, convey but a poor idea of the contents of some of these giants of the forest. Overhead carriage of the logs, by suspending these from a cable by means of a trolley carrier that is supported between two stout trees, is the usual method adopted; but there are other ways such as by dragging the logs along a prepared wooden V-shaped trough that is formed by placing three trees side by side, the middle one being about a foot below the level of the other two, thus forming a groove along which the logs are hauled to the water side. When sufficient logs are got together they are formed into a "boom" which is a collection of logs placed close together and held so by means of chains that are passed along and securely fastened to the outer or circuit logs, and conveyed to their destination by steam or motor tugs.

Sky-line System of Collecting

In the case of logs that, as at the Capilano camp, are to be loaded direct into private railway trucks for delivery at the base, the overhead or sky-line system of collecting is adopted, which consists of an endless wire rope worked by one or two donkey engines, and an interesting and unusual sight it is to see huge logs of the Douglas fir or cedar passing along the wire suspended high up in the air. Having arrived at the sawmill, which is usually conveniently situated by the waterside, whether the sea or navigable lake or river, the floating logs are drawn by power machinery into the mill and there converted by circular or band saw into the desired specifications, whether as commercial lumber or for railway ties, boards and scantlings. Conveying some of the mighty logs of cedar or fir to the saw bench by means of iron carriers, placing and holding them in position, so that the exact dimensioned boards and scantlings may be cut off, and removing the converted timber to wharf or rail for dissimination to almost every part of the globe point out how up-to-date are the machinery and appliances in these well-appointed Canadian mills. When not required for immediate use, the converted wood is carefully stacked in the adjoining timber yard, each kind and size being placed separately, there to remain until a suitable order calls for their removal. Some of the Vancouver sawmills turn out about 130,000,000 ft. annually, and can deal with logs 100 ft. long and 6 ft. in diameter. Planing machinery is often an adjunct of the sawmill where flooring boards, doors, window frames and mouldings are made.

WINNING THE PRIZES OF LIFE

The prizes of life can only be won by energetic action, earnest application and forceful initiative. If you are not giving everything in you to your work—you are cheating yourself. The result is weakening to your character as well as dwarfing to your ability.

What Loggers Were Up Against This Winter

Operators Had to Put Up with Vagaries of Weatherman in Addition to Labor and Financial Handicaps—Wages May be Lower on Drives This Spring

By Everett Andrew, Ottawa, Ont.

To accurately determine production, prices, cost of supplies, stocks, and the demand for the next five years, or even to predict the final history for the year of 1921, one would need to be possessed of the supposedly supernatural powers.

Back in 1915 and 1916 efforts were made by some of the far-sighted lumbermen—whose foresight was better than their hind-sight—to curtail on production. They did it and sold what stocks they had on hand at particularly good prices. That was before the cost of labor jumped. Some of them are regretting it now. Then came the labor shortage, which later entered into the operations of the 1919-1920 season.

The year of 1920 has with the trade in general been one that can in the future be referred to as a "bad" year. To begin with, wages for woods labor, together with the cost of camp supplies, reached the highest peak they have ever attained in Canada. This year, the cost of labor is somewhat lower, and the prospect is that the cost of camp supplies will decline. Any reduction, however, that will occur in woods operations, will not in the case of most companies reflect itself on the sale price of lumber to the public for twelve months or more.

At the start of 1920 there was a great scarcity of labor in the woods of the Ottawa Valley companies, and wages were about thirty-five per cent. higher than they had been the previous year. In the supply arena for the conducting of the operations pork was costing around fifty-eight dollars per barrel; hay, thirty dollars per ton; oats around ninety-five cents per bushel; and flour around eleven dollars per barrel. Canned goods were on an average twenty per cent. higher than in 1919.

All of which to the everyday public does not mean anything, because not one person out of one hundred stops to consider the cost of woods operations, the difficulties that have to be encountered, the expenditure of real money that has to be made, and lastly, where the cut that is to be taken out has to be disposed of. All the public looks at is the price of lumber—something that it sees in front of it in the manufactured article, but, beyond that, they do not give a tinker's cuss,—outside of its effect on their pocket books or bank accounts, when they come to buy it.

Still the old cry goes forth condemning the high price of lumber and the manufacturers in general are all rated as being profiteers. The only answer to those who will not believe what it costs to produce lumber is to let them try operations themselves. Probably even with the high prices prevailing to-day, they will get enough of it in about six months or a year.

The past year without a doubt has been one of the most trying in the history of Ottawa Valley lumbermen. From woods operations down to the selling end, everything connected with the operations of companies has been disturbed, thrown out of its usual course, and in short a period of readjustment, following the period of the war made itself felt in the trade.

Wondering What Was to Happen

Economic and financial laws asserted themselves, with a vengeance, which at the end of 1920—and even into March, 1921, left the trade generally wondering what has happened, what was going to happen, and what it was going to do about it?

Hampered greatly at the start of the year by a shortage of woods labor which was on the whole only "fair" in efficiency, the operators last July and August set themselves about getting out a bigger cut. They didn't know then that the bottom of the market was going to drop out in United Statess, but they went ahead on the assumption that business was going to be as good for the remainder of the year as it had been for the first six months.

New and more numerous camps were to be established, and stocked. In many cases they were, and in September and October the call went forth for men. The help did not come until late, and when it did come, it was after the time of its arrival, to the operators, had ceased to exist. The consequence was that camps that would be producing logs to-day are not in operation simply because labor laid down on the job, at the time that it was most needed. The result will in all probability be a lowered cut, which means a stronger demand, and higher prices than if the market were flooded with lumber, and the price cutting system was evoked to increase sales. Though it has cost the operators thousands of dollars which will in all probability be charged up to "loss," these thousands will have to be charged up as so much per thousand on the lumber that was taken out of the other camps. Labor in its share will have to contribute both from the industrial and buying ends to make good these losses. The general public will have to carry the rest.

On top of labor and financial difficulties, also entered Old Man Weather, who last season seemed to have absorbed a grouch which he has to all appearances retained and has carried into this year's operations. In the 1919-20 operations companies were badly handicapped by a lack of snow. This year the early season operations promised most favorably and were ideal for getting logs out of the woods, but when the time came for getting severely cold weather for roadmaking and iceing the roads, the weather man wasn't around.

On top of this came the very light fall of snow, which lumbermen are still worrying about in connection with the spring drive. From the receipt of reports from companies to the writer, it appears a safe assumption to predict that the number of logs piled on skidways, ready for the streams to open up, is not as great as at a corresponding period last season, despite all that has been done to increase production. Now the question is, has there been sufficient snow to cause the usual amount of drainage of water into the streams to bring the logs down?

If there is not the high-priced logs will stay on the banks or get stranded and lay up for another year, with resultant loss to the company that owns them. On the other hand, if there is sufficient water to get the logs into the drive, there is every indication that there is plenty of labor to handle the spring drive. And the wages of labor for this year's drive should not be as great as last season.

Money, beyond question has been very "tight," and this has had the effect of curtailing a great amount of building activity, with a consequent loss of sales to the wholesaler and the retailer. Money and labor, perhaps, are the two chief factors, which have caused the stagnation of the lumber market to-day.

Still, woods operations are going on, and they are going to go on, and the lumber trade in general within a year or eighteen months from now should be back with itself. In other words, the outlook is good, for the reason taht there is no over surplus of stocks, American and European markets have got to buy again, building must increase, and when it does the chances are that there will be one of the old-time scrambles to get stocks to sell. Hang on!

Big Gain in Wood Products Exports

The export of lumber, laths, pulp wood, shingles, spruce piling and wood pulp to the United States during the year 1920 from the port of St. John, N.B., shows a decided gain over the preceding year, as follows:—

	1919	1920
Laths	$ 264,967.97	$ 374,925.45
Lumber	1,216,279.32	2,325,169.80
Pulp wood	134,266.55	296,001.32
Shingles	16,534.10	15,362.25
Spruce piling	13,609.50	20,264.10
Wood pulp	1,006,278.92	1,827,680.61
	$2,651,936.36	$4,859,403.53

Newsy Jottings of the Industry

The Harris Wood Products Company, of Streetsville, Ont., will be re-started under a new directorate with doors and sashes as the staple output.

Last year 380,000 acres of timber, or 236,000,000 feet, valued at $299,000, was destroyed by fire, according to the report tabled by the Minister of Lands in the British Columbia Legislature. Damage to young growth and range is placed at $186,000, as the total damage to forests amounts to $485,000, as compared with $393,000 in 1919.

Robinson Lumber Co., Limited, Fort William, Ont., was recently incorporated to conduct a general lumber business as sawmillers and manufacturers of wood products. Capital, $100,000. H. W. Robinson and M. Cochran, both of Fort William, Ont., are two of the incorporators.

Shackleton Pulp and Lumber Co., Limited, Toronto, has been incorporated to deal in all kinds of lumber and pulp products. Capital $50,000. Two of the incorporators are A. M. Moffat and W. L. Bland, both of Toronto.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

Wanted—White Pine

One or more cars 4 and 5/4 stained, good good short white pine. Mell & Sons Lumber Company, Philadelphia, Pa. 6-9.

Wanted

Rock elm 3¼" thick suitable for bending purposes. Quote prices to the St. Mary's Wood Specialty Co., Limited, St. Mary's, Ontario. 5-6

Wanted Lath

Prices on Hemlock, Pine and Spruce lath; delivered Detroit rate. Brewster Loud Lumber Co., No. 1307 Majestic Bldg., Detroit, Mich. 3-8

Lath Wanted

Will buy any quantity, White Pine, Spruce or Hemlock. Please quote your best cash price f.o.b. Toronto. C. W. James Jr., 358 Greenwood Ave., Toronto. 6-13.

Pulpwood

We are open to buy a limited quantity of rough and peeled spruce and balsam pulpwood for immediate and future delivery; cash on shipment. Log Export and Import Co., 241 Beaver Hall Hill, Montreal. 5-6

Wanted—Timber Lands

Large or small tracts of softwoods and hardwoods in Ontario. Address Lock Box 262, Sault Ste. Marie, Ont. 4-7

Wanted

15,000 No. 1 railway ties. Can be supplied in Cedar, Jack Pine, Tamarac, or Hemlock. Must be up to standard specifications. Also 2,000 No. 1 railway cross and section ties in hardwood. State what you can supply, giving point of shipment and when shipment can be made, with prices for each kind. Box 478, Canada Lumberman, Toronto. 4t.f.

Lumber For Sale

FOR SALE—Hickory dimension squares and flitches. It is true economy to purchase our stock sawn to your net dimension. J. Murchison & Son, Dickson, Tenn. 6.

Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co., Jamestown, N.Y. 6-t.f.

FOR SALE—3000 Cords of Mixed White Birch and Tamarac, ready for shipment 10th December, 1920, at Stone Siding, A.E.R., 28 miles west of Sudbury. For further particulars apply to C. G. Hyett, Worthington, Ont., Soo branch C. P. R. 24-5

Cedar and Maple

We offer at attractive prices two cars cedar squares 6 x 6, and 4 x 4 running largely 16 ft. long. 2 cars 1" and 2" cedar edged; 2 cars 1" hard maple No. 1, 2 and 3 Common.

Peterborough Canoe Co., Limited.,
4-7 Peterborough, Ontario.

For Sale

1 million feet No. 1 and 2 common fir and larch lumber partly cut dimensions, boards and shiplap, balance to be cut to suit buyer. Also in the rough 30,000 feet inch Jack pine mill run. 3 cars inch clear No. 1 and 2 larch with about 15% fir mixed and 1 car No. 1 and 2 shelving. Michael Dumont, Bridesville, B. C. Ship anywhere. Rates to Alberta and Saskatchewan 4 cents advance of C. P. R. Grand Forks rate. 5-6

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

For Sale

300,000 feet Birch in logs ready to start sawing under National rules. Offered as No 3 common and better. Apply P.O. Box 6, Victoriaville, Que. 6-tf.

Crating Spruce

About 500 M. feet of 1 in., 2 in. and 3 in. cull spruce, also one million laths. J. P. Abel. Fortin Limited, 379 Desjardins Ave., Maisonneuve, Montreal, Que. 6.

Saw Logs For Sale

About 15,000 sawlogs, pine, spruce and hemlock, for sale by piece or feet B.M. on Vermillion River near White fish Station, C.P.R. or will give job of sawing. Con. McGuire, Whitefish, P.O., Ont. 6-9.

Machinery Wanted

WANTED—Two heavy log or lumber trucks. Box 257, Canada Lumberman, Toronto. 11-t.f.

WANTED—Pulpwood barker (Moreau) of recent model in first class condition. H. E. Goodhue, Sherbrooke, Que. 5-8

WANTED—One friction feed nigger and one 32" double edger. Must be in good condition. State price and manufacturer's name. Apply to Box 500, Canada Lumberman. Toronto. 5-6

Wanted

Inserted tooth circular saw standard gauge 54 in. or 56 in., to fit 2 in. arbor. Box 240 Tory Hill, Ont. 6.

Wanted

One 4 wheel slab dump cart, also 2 lumber truck wagons. Second hand in good condition. Address Anglo Canadian Tie & Timber Co., Stackpool, Ont.

Wanted—Portable Sawmill

to cut 2,000,000 feet of lumber, district near Englehart. Apply Box 526, Canada Lumberman. 6

WANTED; 1 only six saw edger. Must be in excellent conditions. Also one circular saw grinder. Give name of manufacturer and price in first letter. Apply Box 459, Canada Lumberman, Toronto. 5-6

Wanted

Double drum steam log jammer or steam hoist. Will buy or rent. Advise size, condition, price, etc.

F. STANLEY KNIGHT,
5-8 Meaford, Ontario.

Machinery For Sale

FOR SALE—Complete saw mill equipment, including three horizontal boilers, Corliss engine, Buckeye engine, double edger, circular saw with top saw, steam carriage and nigger and extra heavy transmission complete. Box 503, Canada Lumberman, Toronto. 5-8

FOR SALE—Guaranteed rebuilt filing room machinery. Send for monthly mailing list. Ge Bott Mfg. Company, Big Rapids, Mich. 6-9.

For Sale

One covel automatic band saw grinder for double cutting saws; a bargain; immediate shipment. The Muskoka Wood Mfg. Co., Huntsville, Ont. 6-9.

For Sale—Locomotive

One 28 Ton 3 Cylinder 8 x 10 Standard Gauge Lima Geared. Located in Canada. Box 376, Canada Lumberman, Toronto, Ont. 19tf

For Sale

One 12 in. x 16 in. slide valve engine with heavy belt wheel 14 x 72 ins. in good condition; good sawmill power. Geo. Craik, R.R. No. 2 Mossley, Brampton, Ont. 6-7.

For Sale

1 four-saw Filer & Stowell edger, 1 ten-inch steam feed, complete with valves and piston rod, 1 used Waterous carriage, 1 friction clutch coupling, 14 in. diameter, 3 7/16 in. bore. Apply Bishop Lumber Co., Ltd., Nesterville, Ont. 3-6

One 12 x 12 centre crank engine, 60 h.p.; one centre crank engine with sub-saw, 75 h.p.; one centre crank engine, 30 h.p.; one side crank engine, left hand, 20 h.p.; one 27 h.p. portable engine on wheels, also new portables on wheels or skids 24 to 60 h.p. The Robt. Bell Engine & Thresher Co., Ltd., Seaforth, Ont. 6-11.

For Sale

One pair 12 h.p. twin engines Waterous make, feed for saw carriage with rope and piping and connections complete in good running order. Price f.o.b. cars $200.00. Open for inspection. Apply to Parker Bros., Parkersville, Ontario. 6.

I Offer for Quick Shipment the Following Machines

Subject to Prior Sale

Please give me an inquiry if you do not find the machine you want among those listed below as I have about two hundred additional woodworking machines of various types.

Matcher and Sizer, 30 x 12 American.
Matcher, Hardwood Berlin, No. 89.
Matcher, American No. 77-B Double Profiler.
Matcher, Woods 24 in. x 6 in.
Matcher, Hardwood American No. 229.
Matcher, American No. 22 24 x 6.
Moulder, Hermance 10 in. wide open side.
Moulder, Greenlee Bros. 6 in. open side.
Moulder, C. B. Rogers 6 in. outside.
Moulder, Berlin 10 in. No. 118 inside.
200 prs. Moulding Knives ground to shape.
Band Resaw, Mershon 44 in.
Band Resaw, Connell & Dengler 60 in.
Band Rip Saw, American No. 1 Roll Feed.
Band Rip Saw, Fay & Egan No. 202 chain feed.
Circular Resaw 44 in.
Circular Saw Mill, Hoosier Pony.
Circular Saw Sharpener, Rogers 40 in.
Fan., 30 in. Brand New Clarage Single.

Wood working industries for the Town of Massey, Ont. 1,000 population. Gravity water system. Situate junction of Sable and Spanish Rivers. On C. P. R. Soo line 58 miles west of Sudbury. Unlimited Raw Material for Box Lumber, Veneer and Hardwood Workings. Telegraph and local and long distance telephone service. Four passenger trains daily. Ideal building sites. Unlimited water power awaiting development. Three water powers within the town limits.

Interested parties communicate with Board of Trade for further information regarding concessions on taxations, water supply and building sites.

A. A. HALLETT,
4-7 Sec'y. Board of Trade.

Pulpwood 1921-1922

Firm in Northern Ontario is in a position to offer from 20,000 to 40,000 cords Spruce pulpwood yearly, both Winter and Summer delivery, for a number of years. Also large quantities of Poplar pulpwood. All exportable. Would consider proposition as Agents for U. S. Mill. References.

Apply Box 470,
c/o Canada Lumberman,
Toronto.

FOR SALE.—Retail lumber yard, saw and planing mill, good business established for 20 years, in an excellent village of Southern Ontario. Would sell sawmill separate. R. S. Robinson, Waterford, Ontario. 4-6

For Sale—Pulpwood Rights

We control several high-class freehold properties on rivers entering into the Atlantic Ocean, containing large quantities of Spruce Pulpwood. We would sell outright, or stumpage rights and agree to deliver the wood on vessels. Address Box 458, Canada Lumberman, Toronto. 3-6

Lumber Property For Sale

About 8,000 acres (held in fee) of lumber lands estimated to contain about 30,000,000 sp. feet of merchantable soft wood.

As a pulp wood proposition, this property should contain 60,000 cords or more.

Included with the lands, is a saw mill, equipped with Dutch furnaces, Waterous edger, planer and lath machine, and situated along the line of the C. N. Railway, the port lies within three miles of the mill, so that water shipments may be made as well as rail.

All the lands are within easy distance of the river, and stream driving does not exceed a distance of more than six miles.

For further information apply to

E. A. SMITH,
23t.f. Shediac, N. B.

Sale of Lands

Under the instructions from The Honorable the Secretary of State for Canada, the Custodian of Alien Enemy property, there will be offered for sale by public auction, by Mr. G. R. Duncan, Auctioneer, at the Council Chamber in the City Hall, in the City of Fort William, in the District of Thunder Bay, in the Province of Ontario, on Monday the fourth day of April, 1921, at eleven o'clock in the forenoon, a large number of parcels of land, said to contain in all about 17,000 acres, and situate in the Townships of Blake, Crooks and Pardee, in the Municipality of Neebing, in the said District of Thunder Bay. Each parcel of land will be put up for sale separately.

The lands are said to be valuable for the timber thereon and for mining and agricultural purposes.

The lands were formerly owned by alien enemies, but are now vested in the Custodian by virtue of The Treaty of Peace (Germany) Order of 1920.

Each parcel will be offered for sale subject to a reserve bid.

The highest or any tender will not necessarily be accepted.

Terms: Ten per cent. cash at time of sale and balance within thirty days.

A list of the lands and acreages, with terms and conditions of sale, may be seen at the office of the under-named Solicitor, and the above named Auctioneer, and at the office of the Deputy Custodian, Ottawa.

W. F. LANGWORTHY,
Port Arthur.
Solicitor for the Custodian.

Dated March 3rd, 1921. 6-7

Miscellaneous

"When you have any transit cars and cannot find a home for them, ship them to us. We will unload, store, insure and reload them when you desire, at reasonable charges. Write for full particulars." The Forest Products Co., Canton. Ohio. 6.

Sale of Red and White Pine

Tenders will be received by the undersigned up to and including Wednesday, the 20th day of April 1921, for the right to cut the Red and White Pine Timber on parts of the townships of Afton and Sheppard, in the Temagami Forest Reserve, in the district of Sudbury, having an area of 22 square miles.

For further information, Maps, etc., apply to the undersigned, or to Mr. J. T. McDougall, Crown Timber Agent, North Bay, Ontario.

BENIAH BOWMAN,
Minister of Lands and Forests.

Toronto, March 3rd, 1921.

N.B. No unauthorized publication of this Notice will be paid for. 6-8.

TENDERS FOR PULPWOOD and TIMBER LIMIT

Tenders will be reecived by the undersign- up to and including the **4th day of July, 1921**, for the right to cut pulpwood and pine timber on a certain area situated in the vicinity of Long Lake, District of Thunder Bay.

Tenderers shall state the amount per cord on pulpwood, and per thousand feet, board measure, on pine, that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for spruce and 40 cents per cord for other pulpwoods, and $2.50 per thousand feet, board measure, for pine, or such other rates as may from time to time be fixed by the Lieutenant-Governor-in-Council, for the right to operate a pulp mill and a paper mill on or near the area referred to.

The successful tenderer shall be required to erect a mill or mills on or near the territory and to manufacture the wood into pulp and paper in the Province of Ontario.

Parties making tender will be required to deposit with their tender a marked cheque, payable to the Honourable the Treasurer of the Province of Ontario for fifty thousand dollars ($50,000), which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out con ditions. etc.

The said $50,000 shall remain on deposit until the pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation, the deposit of $50,000 may be applied on account of bonus dues as they accrue, but the regulation dues as mentioned above shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelope and marked plainly on outside "Tender for Long Lake Pulp and Timber Limit."

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, January 24th, 1921.

N.B.—No unauthorized publication of this notice will be paid for. e.o.i.-4-13

Sale of Timber

Tenders addressed to the undersigned will be received for the purchase of approximately 531 M. fbm. timber and 518 poles up to noon **April 4th, 1921.**

All of the timber was purchased new in the latter part of 1920 and has never been used. Ninety per cent. of the stock is No. 1 Common B. C. Fir of good merchantable quality and the balance is of B. C. or Ontario Hemlock. It is all in the Toronto yards, conveniently located on railway sidings for loading.

Detailed list giving dimensions and further information may be obtained upon application to the undersigned.

The highest or any tender will not necessarily be accepted.

Leasing of Water Powers and Timber Limit

Notice is hereby given that on **Wednesday, June 1st, 1921**, at 10.30 a.m., in the sales room of the Department of Lands and Forests, at Quebec, the following will be offered at public auction:

1. Different water power sites on the Megiscane and Bell Rivers, in the County of Temiscamingue;

2. A timber limit 400 square miles in area in the projected township of Louvicourt, Narrias, Tiblemont and Vauquelin, in the upper part of the Bell River watershed.

For fuller details and information please apply to the Department of Lands and Forests at Quebec.

ELZ MIVILLE DECHENE,
e.o.i.4-10 Deputy Minister.

TENDERS FOR PULPWOOD and TIMBER LIMIT

Tenders will be received by the undersigned up to and including the **15th day of June, 1921**, for the right to cut pulpwood and pine timber on a certain area situated on the Nagagami River and other territory adjacent thereto, in the District of Algoma.

Tenderers shall state the amount per cord on pulpwood, and per thousand feet, board measure, on pine, that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for spruce and 40 cents per cord for other pulpwoods, and $2.50 per thousand feet, board measure, for pine, or such other rates as may from time to time be fixed by the Lieutenant-Governor-in-Council for the right to operate a pulp mill and a paper mill on or near the area referred to.

The successful tenderer shall be required to erect a mill or mills on or near the territory and to manufacture the wood into pulp and paper in the Province of Ontario.

Parties making tender will be required to deposit with their tender a marked cheque, payable to the Honourable the Treasurer of the Province of Ontario, for fifty thousand dollars ($50,000), which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out conditions, etc.

The said $50,000 shall remain on deposit until the pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation the deposit of $50,000 may be applied on account of bonus dues as they accrue, but the regulation dues, as mentioned above, shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelope and marked plainly on outside, "Tender for Nagagami Pulp and Timber Limit."

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, January 24th, 1921.

N.B.—No unauthorized publication of this notice will be paid for. e.o.i.-4-11

What is Dry Rot?

The term "dry rot," the Forest Products Laboratory finds, is applied by many persons to any decay which is found in wood in a comparatively dry situation. Thus loosely used the term actually includes all decay in wood, since wood kept sufficiently wet can not decay.

In the more limited sense in which pathologists use the term, "dry rot" applies only to the work of a certain house fungus called Meruluis lachrymans. This fungus gains its distinction from the fact that it is frequently found growing in timbers without any apparent moisture supply; in reality it does not grow without moisture and is as powerless as any other fungus to infect thoroughly dry wood. Given moist wood in which to germinate, it is able to make its way a surprisingly long distance in dry timbers, drawing the water it needs from the moist wood through a conduit system of slender, minutely-porous strands.

Wood in the typical advanced stage of dry rot is shrunken, yellow to brown in color, and filled with radial and longitudinal shrinkage cracks, roughly forming white felty mass, the interwoven strands of the fungus. The decayed wood is so brittle and friable that it can easily be crushed into powder.

Review of Current Trade Conditions

Ontario

There is not much change in the general lumber situation which, in some respects, is growing more satisfactory although sales are by no means numerous. Considerable discussion is heard regarding the prospects for building during the coming season, and so far the outlook is not disappointing. It is not believed that there will be many extensions made in 1921 to industrial plants as these were carried out on a large scale during 1920. That was a year of expansion with most industries. There is, however, likely to be an increased volume of residential work which will translate itself into active requisitions for lumber and woodwork of all kinds.

Figures issued by MacLean Building Reports Limited, show that during January and February, 1921, contracts were awarded, in Canada, for residential work to the value of $4,212,500 as compared with $3,810,000 for 1920 and $2,096,000 for 1919, and that the residential work reported during the same two months as being contemplated, but for which contracts have not been awarded, totals $7,123,300. For business buildings, such as stores, warehouses, etc., but not industrial plants, the figures are $13,335,400 for January and February, 1921, as against $9,880,500 for the corresponding period of 1920. Using these figures as a criterion or business barometer, it would appear as if the prospects for 1921 for the whole woodworking industry are fairly bright.

In regard to lumber prices, various opinions are expressed. Some predict that quotations will take another drop within a month or six weeks, but the majority adhere staunchly to the belief that fluctuations have about reached rock-bottom. This declaration of view is no doubt founded upon the high cost of production, as many operators claim that labor and manufacturing outlays on the new cut will be fully equal to those of last year, while others affirm that the disbursements will be 10% higher. Some producers contend that current market prices are to-day 20% below the basis of replacement costs.

A good general idea of conditions which are likely to rule in the industry during the coming year is furnished on other pages of this edition. It will be noticed that the cut will be reduced considerably at practically all important centres, and while there is a quiet confidence and feeling of hopefulness existent in the lumbering arena, there are no such exuberant utterances as prevailed last spring, and no one believes this will be a "banner year" or a "record-breaking era." It is felt, however, that the last six months will likely be better than the first six months, but it will take a longer period than was at first anticipated to equalize production and demand and to stabilize price conditions.

Word received from the West is to the effect that a number of sawmills and shingle mills in British Columbia are resuming operations after a shut-down of several weeks. While none of them are operating to capacity, still the renewal of activity is a hopeful sign. There has not been very much improvement in the market demand but in order to make operation possible without sustaining heavy losses, there has been a radical reduction in wages. It is stated that some mills are paying only $2.50 a day. The operators were forced to put the issue straightforwardly to their employees and to let them know that it was either a case of accepting this or closing down the plant for an indefinite time. Most of the employees who had been out of work for several weeks have accepted. Lumbermen on the coast claim that the increased rail rates, and stiff competition being offered in the eastern markets by southern pine, makes it necessary that production costs should be considerably curtailed. It is also stated that some prairie lumber dealers have decided to take a loss on present stocks in order to speed up turn-over and encourage retail buying.

Everyone in the lumber business is disposed to move cautiously at the present time, and usually at this period many millmen have sold their output for the coming season. This year very few sales have been made. Some of the smaller operators are looking around for purchasers but wholesalers are disposed to hang back and let the manufacturer "carry the load." Those wholesalers who have only small stocks at the present time consider themselves in a good position and are not anxious to load up at this juncture.

In the hardwood market there is a great scarcity of 4x4, 5x4 and 6x4 birch in first and seconds. The numbers of enquiries received of late are encouraging but the market is variable. One day wholesalers believe that conditions have picked up materially and the next day there is a lull, so that it is impossible to state what will transpire in the trading line for a few weeks yet. Most dealers are, however, optimistic and believe that the outlook is fair.

It is gratifying to learn, however, that there is a slow but gradual improvement in industrial conditions, and many plants in the woodworking line, such as furniture factories in which business has been at a low ebb for the last couple of months, the majority being closed down, have the wheels running once more and are producing about half of their normal capacity. This would indicate that the low point in volume of output and demand has been passed and that the trade current is now running in the opposite direction. Business is not likely to come back with a rush but there is no reason to despair so far as the future is concerned. It is felt that a better demand will assert itself before the new lumber cut is ready to go into consumption some months hence. Confidence in the stability of prices is the great essential factor to increased activity in the market, and judging by the gradual increase in sales, such a feeling is more in evidence to-day than it has been for some little time past.

United States

With the inauguration of the new administration at Washington and many new policies of trade and commerce, it is felt that business may pick up considerably. No sudden revival is looked for but it is hoped that the tone will be upward and conditions become more stabilized as the weeks go round. So far there is little disposition on the part of large consumers to commit themselves to purchases except for immediate need. Normal conditions are returning, however, slowly but surely. Stocks are being reduced and there is an increasing feeling of confidence contrasting with the policy of doubt and hesitation which has prevailed for many months.

One question which looms large at present is—Have prices reached bottom? The view exists in some quarters that there may be a further cut. It is difficult to quote prices on many lines of lumber as no two mills furnish the same figures. Variations run all the way from $10.00 to $20.00 per M from different reliable plants, showing that there is no uniformity. Writing to the "Canada Lumberman" a leading eastern firm say, "We are undergoing a good deal of reduction and will, perhaps, see further declines during the summer and up to next winter, but we are in hopes that before 1921 has passed, conditions will be more stable and regular and that labor and other costs, which enter into the production of goods, will have found a proper level. While selling prices have sagged in many instances, the cost of production has not dropped as it should. Labor is slow to work up or down but labor prices have got to drop to conform to present conditions. We think we will all have to be patient for some little time yet."

In the hardwood arena, the larger industrial consumers state they find business conditions better. True it is that many of them have good sized stocks on hand, and until these stocks are broken or used up will not be in any hurry to place orders. Careful investigations reveal, however, that this spring, even at the present volume of business, these stocks will become broken and a volume of buying of a size considerably in excess of the present rate of production must be the result. In the East and in the South an improvement in the hardwood situation is to be noted. The volume of inquiry has increased appreciably and some stiffening in prices is evident, with fewer bargains available. The furniture factories continue to book reasonable volume of business and while there is keen competition it is very evident that this important division of hardwood consumers is going to need a considerable volume of lumber. Production in the South as well as in the North remains on a low basis.

In southern pine conditions are far from being stable and the market has its ups and downs. It is reported that the railways have been cancelling some large orders lately. The volume of sales seems to have shown little change. Production has increased somewhat and now slightly exceeds the orders booked. Retailers wherever possible are simply filling out holes in stock and consequently some orders calling for a large amount of items are received.

There has been no noteworthy change in the Douglas fir market. Restricted as it is on account of the high freight rates and the consequent advantage of southern pine, it remains weak, and the future is rather obscure. The only feature in the Douglas fir trade appears to be a recent strengthening in the price of timbers, but this has been more than offset by continued declines in the prices of such items in heavy supply as dimension, common boards and slash grain uppers. Vertical grain uppers show greater firmness and it is thought that another month will see substantially better prices on this class of stock, especially as it is in quite low supply.

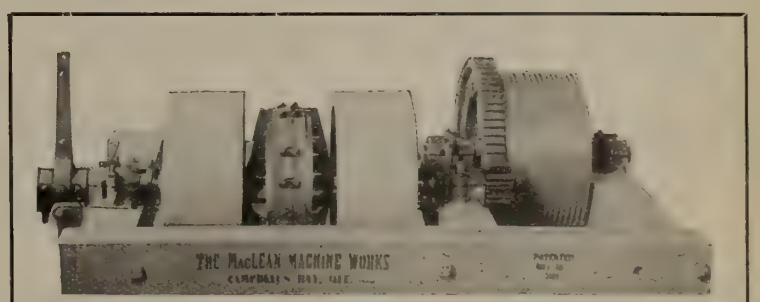
Adaptable To All Conditions



The MacLean Friction Feed Works is mounted on two bearings, left and center. It is a shaft on which is rigidly keyed a casting carrying the interchangeable center friction blocks. Loosely mounted on the shaft and on either side of center friction are two belt driven frictions driven in opposite directions.

The forward and reverse directions of carriage are obtained by engaging center friction with either of belt-driven frictions, which transmits the power through shaft and gear to drum.

The end-thrust is taken care of by bearings between end of side friction sleeve and main bearings. Any wear on blocks is followed up by adjusting main bearings in that direction. Frictions are engaged by shift lever at the right. Each friction has 188 square inches of contact surface engaged, thus insuring long life of blocks.

The feed is governed by the tension the sawyer puts on the lever. In many instances and conditions this machine has stood out and proven itself adaptable to all conditions.

THE MACLEAN MACHINE WORKS

CAMPBELL'S BAY, QUEBEC

Great Britain

The number of buyers increases each week but it is also stated that there are also more sellers and that the policy seems to be not to buy until an order is secured. Competition is so keen that prices generally are cut very fine and profits are down to a meagre basis. There are, however, several encouraging features of the trade and each week conditions are a little brighter in some lines, at any rate. One of these is the repeal of the excess profits duty made by the Chancellor of the Exchequer. The "Timber Trades Journal" announces that the tax in its incidence, fell heavily upon the wage industry as the three years prior to the date in which it came into force were exceptionally lean, and in the absence of more satisfactory records quite a large number of concerns were obliged to fall back upon the statutory percentage originally fixed, namely six per cent. in respect of companies and seven per cent. in the case of other traders, as the datum line above which they had to divide their profits with the State.

The same journal also in a recent issue says: We heard a good deal last year about a consumers' strike in America, and of its wonderful effect a little later on its reducing commodity prices. Timber agents in Great Britain are almost beginning to think that there is a buyer's strike here, so universal is the refusal to make any contracts except for goods for special orders. We do not suggest that there is any organized plan to this effect in the timber trade. It is really a consensus of opinion that, in order to put trade on a healthy basis, prices must be forced down. We can see a stubborn fight between buyer and seller before the 1921 values are fixed, and also a very dragging market indeed, unless the shippers considerably modify their present ideas.

Recent advices from Liverpool stated that business continues quiet although there is a lively expectation that conditions will soon revive. Everyone hopes that this will be the case, but optimism at the moment is difficult to cultivate owing to the extreme slackness in every industry throughout the land. The demand for timber will arise only when circumstances permit; in other words, as soon as the general trade of Great Britain commences to revive, so will the demand for timber become strong again.

At the same time, there is not much hope of a great revival in business until the market conditions are settled on a firm basis. The present trend in values is downwards, but no one can safely say that the bottom has been reached, and so long as prices continue on the downward grade, so will the demand suffer accordingly. The brokers are firm in their conviction that prices cannot fall any further without shippers in the U.S.A. losing money, and even the wealthiest concerns cannot go on shipping at a loss, so that perhaps the present moment may prove favorable for buying future deliveries. On the other hand, if shippers are still loaded with heavy stocks, it may suit their convenience to go on selling even at lower values than those now ruling. But the main factor to be taken into consideration is this: that if trade in America revives sooner than it does here, then prices are sure to rise again to the detriment of the export trade to England as well as to the Continent.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Ottawa Prices Hold Firm—Spruce is Weaker

Indications that the number of logs to reach Ottawa sawmills from this year's wood operations, would be considerably reduced as compared with last year, continued to show themselves with several of the Ottawa Valley companies during the opening period of March. From March 4th to 10th mild weather set in, and in some cases was accompanied by rain, which seriously handicapped companies in getting their logs out of the woods.

"It will be very difficult if we can squeeze through this year. The snow in the woods is rapidly disappearing and it will be exceeding hard work if we can get out as many logs as last year. Then again if we do get them to the streams it appears doubtful if there will be sufficient water to float them down," was the remark of the head of one of the largest companies operating in the Ottawa Valley.

The market for the first part of the month remained pretty much as it was during February. The demand did not increase and the lull which set in late last year continued. The general impression in the trade was that business would not pick up till around the middle of April. Prices continued to hold firm, though reports were received that spruce might weaken still more.

Labor and rail transportation conditions showed little, if any, change. In the bush there is reported to be more labor than is now needed to handle the drive and those who have been in since the start of the operations, are either getting ready to come down on the spring drive or else come out of the woods.

The trade at the present time is chiefly concerned in the getting the logs out of the woods, and is not worrying much over the prospect of a labor shortage occurring when the sawmills open up. The general trade, wholesale and retail, as well as the manufacturing end, promises to continue quiet until the end of the month, if not longer.

Montreal Looks for Early Revival in Volume and Price

The montreal market remains quiet. There is as a rule very little business passing at this time of the year, but just now orders are unusually scarce. A few cars are being sold, or to put in the phrase of a wholesaler, "not sold, but given away." This is perhaps too emphatic a description of the condition; but it indicates the slowness of trade and the tendency to accept lower values. At the same time there is a very strong opinion that with anything like a demand, prices will quickly respond.

Right through the dull period wholesalers have preserved a stiff upper lip, in the belief that we shall soon see a revival both in the volume of business and in prices. That is still the attitude, generally speaking, although on occasion one comes across a Doubting Thomas who believes that the entire lumber position is bound to lead to still further declines.

With regard to building prospects, a great deal depends upon whether costs will decrease to any appreciable extent. It is admitted that certain basic materials will not decline, but reductions in iron and steel and paints and oils are announced. The former are, of course, the more important, particularly as regards large buildings. Besides this, the Builders' Exchange have put into operation a new schedule of wages, representing a cut of a little over 10 per cent. At the meeting it was stated that men are working for considerably less than the rates adopted, and that there is not likely to be any labor troubles as the result of the cut. It was also stated that the contractors desired to reduce costs as far as they could, with the object of stimulating construction. It would look as if there is a prospect of building costs being lower, although one must not look for a very substantial decline.

Exports of pulpwood to the United States continue to increase, although for the moment the mills are stated to be out of the market. A very large amount of wood is being offered to dealers. During January the shipments were 155,752 cords, valued at $2,271,363, compared with 59,789 cords, valued at $615,181, in January, 1920. For the ten months of the fiscal year the exports totalled 1,243,112 cords, of a value of $16,396,940, the comparison being with 738,477 cords and $7,417,390 in the corresponding months of the previous year. In January paper gained $1,969,440, chemical pulp lost $881,214, and mechanical pulp $576,438. The ten months' trade shows a total increase of $59,002,875, the gain in chemical pulp being the feature.

Gone Are the Big Water Shipments

In days gone by many ports in New Brunswick and Nova Scotia were scenes of activity so far as the shipment of lumber is concerned. In Statistical Editions of the "Canada Lumberman" it was customary some years ago to publish the amount of lumber shipped from each eastern port and there was a friendly rivalry between Chatham, Campbellton, Sackville, Albert, Bathurst, Buctouche, Newcastle, Dalhousie, Richibucto, and Shediac. Now nearly all the lumber that leaves these districts is shipped by rail, and in some of the ports mentioned, no vessels have called for years, while in others only one or two or, at the most, half a dozen have sailed away with cargoes of forest products. One harbor master writes that there has been no lumber shipped from his port during the last four years with the exception of one small consignment to the United States. Everything goes by rail. Another master of a port remarks, "No lumber has gone out of here by water in the last five years. We used to have 50 or 60 vessels enter this harbor annually, but there has been only one schooner in here during the last three years, and it was not loaded with lumber." Another New Brunswick man observes. "No lumber has gone out of here except some shipments in pulpwood in the vicinity of 20,000 cords which was sent to Portland, Me." Two or three of the ports, such as Chatham, Campbellton and others, are still doing business. From Chatham there went forth, in 1920, eleven cargoes of deals, etc., totalling nearly 8,250,000 superficial feet. There was also one cargo of birch spoolwood of 1,325,000 feet.

EDGINGS

Richard A. Saunders of Carleton Place, Ont., is erecting a new planing mill.

The Red River Lumber Co., Limited, Shellbrook, Sask., was recently incorporated with a capital of $5,000.

The sawmill of Eugene Fortin, St. Lerc, Que., County of Dorchester, was recently destroyed by fire. The loss was $5,000.

The Emmerson interests will erect a pulp mill at Seal Cove, Prince Rupert. Engineers recently visited the site preparing the way for the plant.

Mackenzie & Graham's woodworking factory and saw mill at Bible Hill, near Truro, N.S., were recently destroyed by fire. The loss is estimated at $40,000.

The Monarch Lumber Co., Limited, of Winnipeg, recently increased its capital stock from $1,000,000 to $2,000,000 by the creation of 10,000 new shares of $100. each.

The Atwood Coal, Wood and Cartage Co., Limited, Atwood, Ont., has been incorporated to conduct a retail yard in lumber, shingles, cement and other building materials. Capital $5,000.

Restigouche Agencies, Ltd., Dalhousie, N.B., have been incorporated to deal in all kinds of lumber and pulpwood products. Capital $10,000. J. Wallace and D. McGregor, both of Dalhousie, N.B., are two of the incorporators.

S. L. Lambert's planing mill at Welland was destroyed by fire, causing a loss of $25,000. Extraordinary work by the volunteer firemen and a heavy fall of snow prevented the blaze from spreading to the lumber yards and adjacent property.

The pulp division of the Bathurst Lumber Co., Bathurst, N.B., which was closed down for several weeks, has resumed operations. The pulp market is still quiet. Wages of the employees have, as a consequence been reduced twenty per cent.

The 2 N.E.P. mill camp of Gilbert Stockford, who is lumbering at Burton, several miles from Gagetown, N.B., was entirely destroyed by fire, with its contents, including blankets, bedding, supplies and extra clothing of the men employed at the camp, together with several sums of money, which the employees had on hand.

A lumber firm in Sydney, N.S., announced a few days ago that a twenty per cent. cut would be made in building material of all kinds. This news was hailed with delight by citizens throughout the province who are anticipating building operations.

A policy of timber conservation designed to ensure a perpetual supply of raw materials for milling and pulp and paper manufacture, is a feature of amendments to the Forest Act brought down in the Legislature lately by Hon. T. D. Pattullo, Minister of Lands for British Columbia.

Keenan Bros., Limited, of Owen Sound, Ont., who were recently granted a new charter will be both a holding and operating company. Keenan Bros. have four companies—Keenan Bros., Limited, Keenan Woodenware Mfg. Co., Ltd., Keenan Towing Co., Ltd. and Eureka Refrigerator Co., Limited.

St. Lawrence Lumber Company, Limited, Quebec, P.Q., was recently granted a provincial charter to conduct a general lumber business, manufacturing and dealing in all kinds of forest products. Capital, $1,000,000. G. Proteau and J. Coulombe, both of Quebec City, are two of the incorporators.

It is reported that the Ocean Falls Pulp & Paper Company will commence soon, construction of a line of railway from their mill at Ocean Falls to a junction with the G. T. P. near Fort Fraser, near Prince George, B. C. In order that the valuable pulp areas along the route may become tributary to the big paper plant.

P. L. Baldwin & Sons, Limited, Coaticook, P.Q., were recently granted provincial incorporation to take over the concern of A. H. Cummings & Sons, Ltd., and to manufacture and deal in all kinds of forest products. Capital, $99,000. Two of the incorporators are P. L. Baldwin and P. T. Baldwin, both of Coaticook, P.Q.

It is unofficially announced that the Wayagamack Pulp and Paper Company of Three Rivers, which closed down their mills a month ago for repairs, will resume operations shortly. It is understood that the output of the company will be doubled as soon as the mills work full time. Large additions are being made to the present mills.

A mill-man operating in the Prince George, B.C. district is authority for the following figures on cost of operating: During the war, stumpage price ran from 75c to $1.00 per thousand, and the royalty was 50c to 65c per thousand. The stumpage price in the same districts is now generally 300 to 350 per cent. higher than it was in 1917 and the royalty has increased 37 per cent., while the price of lumber is now lower than it was in 1917.

The Brown Corporation of La Tuque, Que., has bought the Dansereau Island, in the mouth of the St. Maurice River, where preparations will be made to receive and saw the wood floated down the river. The building of the mills of this company at Ste. Angele, across the St. Lawrence will begin this spring.

Building in Prince Rupert, B.C., for 1920 reached a total of $406,650, which was a fair record considering the year, though it was less than 1919, when the total of new buildings reached $508,804. The large new school at Hayes Cove, costing $175,000, and still under construction, was the largest single item. The biggest previous year's record in the history of Prince Rupert was 1914, when the total was $601,675. In that year the drydock was built.

The Power Lumber Company, Limited, have completed negotiations by which they have acquired all the properties, rights, etc., of the River Ouelle Pulp & Lumber Company of St. Pacome, Quebec, and have taken over the business as a going concern. They have retained the services of the personal of the former company, and state that they can assure the clients the same close attention to their interests in the future, as they enjoyed in the past.

Provincial Forester G. H. Prince of Fredericton, N.B., was recently in Quebec City, where he was in conference with J. A. Morrison, general super-

intendent of the C.N.R., in connection with better forest fire protection along the transcontinental sub-division of the C.N.R. Mr. Morrison was favorably impressed with suggestions made regarding fire protection and stated that they would receive every consideration.

Chapeau Lumber Company, Chapeau, P.Q., were recently granted a provincial charter to conduct a general lumber business, manufacturing and dealing logs, lumber, timber and other forest products. Capital $45,000. W. R. McDonald and A. Lemieux, both of Chapeau, P.Q., are two of the incorporators.

An important recent development in forestry is the inauguration of a Department of Forestry in the Faculty of Science, University of British Columbia, under Prof. H. R. Christie. A five-year course will be given, during the first two years of which the instruction will consist of general arts and science subjects, as in the courses in chemical, mechanical, mining and civil engineering. During the lat three years, the student will specialize in forestry, this being definitely recognized as a branch of the engineering profession. Prof. Christie was for a number of years in the British Columbia Forestry Branch, also with the Canadian Engineers in France. He is a graduate of the Faculty of Forestry, University of Toronto.

It is announced that the Fraser Companies, Limited of Edmunston, N.B., who are well-known pulp manufacturers and lumber operators are issuing $2,000,000 general mortgage bonds through well-known eastern financial corporations. The purpose of the issue is to reimburse the treasury of the company for large capital expenditures made during the past two years. Such outlay was for the extension of plant and limits, and was provided for almost entirely out of earnings. It is understood that when effect is given to the new financing the working capital position of the company will be exceptionally strong, net liquid assets totalling practically 100 per cent. of bonds outstanding.

Building Inspector E. H. Rodgers forecasts in a preliminary estimate recently that building valued at $11,000,000 or $2,000,000 more than in 1920 will be constructed in Winnipeg this year. He said his estimate might be raised considerably when he obtained more information about prices and general building conditions. Early last year he predicted that operations before winter would exceed $8,000,000. The final total for the year was $8,370,150. Prices for building material, Mr. Rodgers said, are declining and many large business structures are contemplated. If the estimate is realized more than 3,000 buildings and alterations will be constructed. The 1920 record listed 2,501 buildings.

At the annual meeting of the North West Boom Company, held recently in Newcastle, N.B., the former directors and officers were re-elected. The lumber prospects were looked upon by every one present as unpromising. All of the piling grounds are full of lumber, and there is no demand for it at any price. The Fraser mill is not to start till July. Last year's cut was 40 million and this year's only 17 million, and the probability is that part of this will be left on the landings instead of being driven down to the booms. No boom-master was appointed, and the lumber that comes down-river may be held there and not rafted. It will be cheaper by far to keep the logs in the boom than to saw them and hold the lumber, as there would be no insurance.

Messrs. Peers & Anderson, shingle manufacturers, Vancouver, have an interesting case before the exchequer court, B.C. Admiralty district, against the Alfred Holt Steamship Company, alleging that the S. S. Tyndareus, of the Holt line, struck a crib of shingle bolts owned by the plaintiffs, while the timber was being towed into Vancouver Harbor. Many of the shingle bolts were lost and the crib damaged. Allegations are made that there was no lookout on the Tyndareus at the time, that the steamer did not comply with the rules of the road, and that the navigation was faulty, also that the vessel was going full speed and was being assisted by a six-knot tide. The defense is that there was no proper lights on the crib, nor on the tug which was towing it.

During the past few weeks there have been but few companies applying for certificates of incorporation in British Columbia allowing them to engage in the lumber or timber industry. Until there is a more active market and a more promising outlook, there is not much encouragement for enterprise in the direction of new incorporations. Among those registering, to whom the Registrar of Joint Stock Companies at Victoria has issued certificates, are the following: Willow River & Stoney Creek Timber Co., of Canada, Ltd., with $250,000 capital, office Victoria. McRae Timber Co., Ltd., Revelstoke, capital $20,000. McDonald, Murphy Logging Company, Limited, Vancouver, capital, $50,000. Kitwanga Lumber Co., Ltd., $225,000 capital authorized, Kitwanga, B.C. Northwest Logging Company, Limited, Vancouver, capital stock, $10,000.

Good Timber Does Not Grow in Ease

The tree that never had to fight
That stood out in the open plain,
For sun and sky and air and light,
And always got its share of rain
Never became a forest king
But lived and died a scrubby thing.
The man who never had to toil,
Who never had to win his share
Of sun and sky and light and air,
Never became a manly man
But lived and died as he began.
Good timber does not grow in ease;
The stronger wind the tougher trees,
The farther sky the greater length,
The more the storm the more the strength;
By sun and cold, by rain and snow,
In tree or man good timber grows—
Where thickest stands the forest growth
We find the patriarchs of both,
And they hold converse with the stars
Whose broken branches show the scars
Of many winds and much strife—
This is the common law of life.

Withstands Severe Wear and Tear in Sawmills

"Gripoly" is made in Great Britain by Lewis & Tylor, Limited

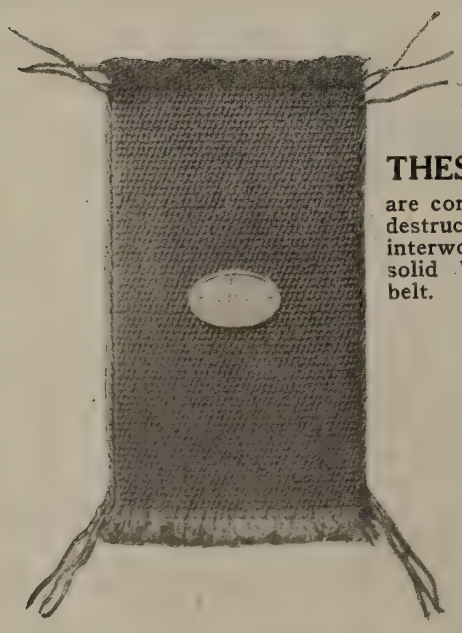
In Sawmills the very best belting is expected to deteriorate in time, on account of the atmospheric conditions and the extreme hard usage it is often subjected to.

"Gripoly" Belting is the strongest woven belting made, and is composed of 85% pure camel hair and 15% best long staple cotton—consequently—

It is strechless, non-slipping and will stand the wear and tear of sawmill service.

"Gripoly" is not affected by oil, grease, acid, steam, water or changes of temperature.

The triple twisted, non-fraying indestructible edges are a feature only met with in "Gripoly" Belting.



THESE EDGES
are composed of indestructible strands interwoven with the solid body of the belt.

if it shows a mixture of fine
and coarse particles—
if it shows a separation of layers—
one dark and one light in color—

then you may know
that it is poorly alloyed—
and that you can get far better
wear from

Lionroyal

Produced by the STANLEY PROCESS of alloying

Lionroyal is clean—uniform—dense grained—and durable.

It is copper-hardened and tin-toughened. Bearings lined with it carry the load evenly—every inch of bearing surface equally durable.

It has no hard spots

of copper or antimony, because the hard elements are thoroughly amalgamated with the tough elements. This fact bespeaks steady service and long wear.

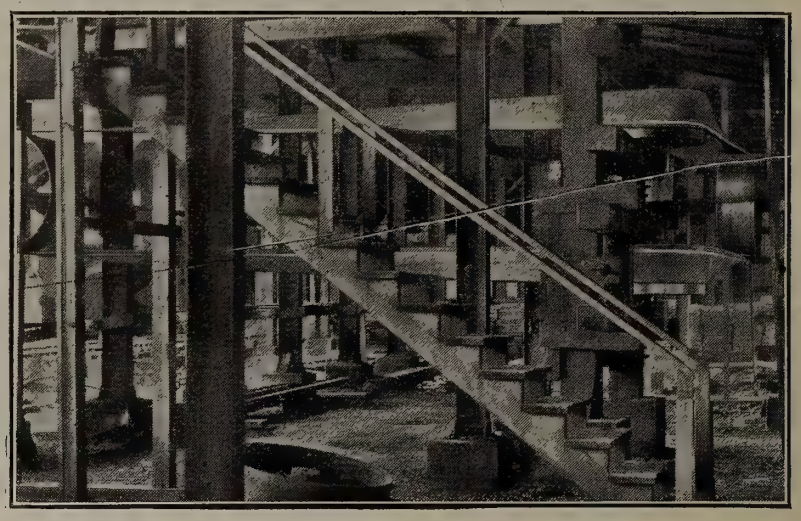
BRITISH SMELTING & REFINING COMPANY LIMITED
MONTREAL

AROUND THE CORNER!

The Mule Drive is interesting because it's a bit different. It looks as if it might be "rough on belts" but when a good flexible belt is used there's nothing to worry about. That's why you find Condor on so many Mule Drives. Specify Condor, the Original, Red, Friction Surface Belt and end your Belt Worries.



Condor BELT

SPECIFICATIONS OF THIS DRIVE.

Drive Pulley 48 inches in diam.

Speed 350 R.P.M.

Driven Pulley 48 inches diam.

Idler Pulley 36 inches in diam. Speed of belt 4400 ft. per min.

This belt is a 12 inch 6 ply Condor, Red, Friction Surface, 82 feet long. It has been running 14 months with the original lacing. It drives two large timber sizers and a 60 inch high speed Sturtevant fan. When fully loaded requires from 100 to 110 horse power.

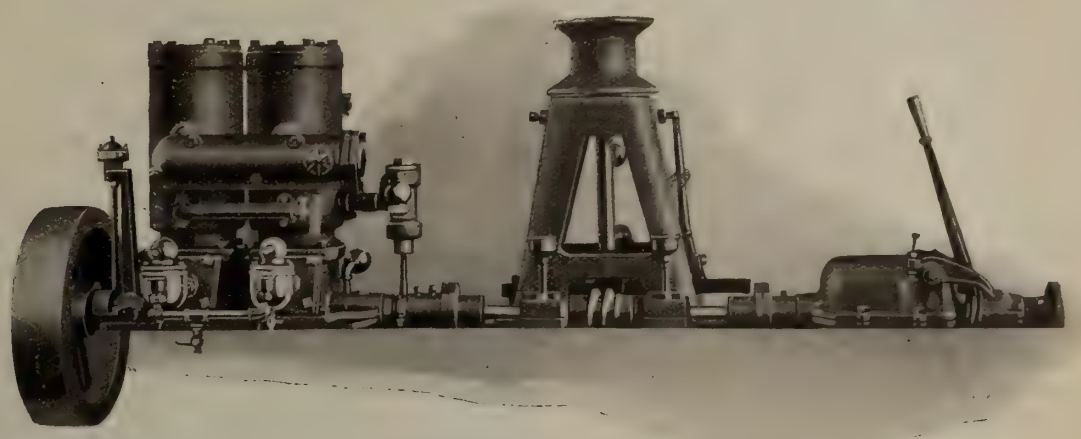
Adams Gasoline Alligator Pointers

Lumbermen find it quicker and easier to work with an Adams Pointer. It is a powerful and efficient gasoline boat that has given satisfaction to the lumber industry throughout the Dominion.

Adams Pointers are made by expert workmen at Penetang. They are easier and safer to use than alligators and tugs. They have a strong, well built, easy running engine and a powerful reverse gear and towing winch that render them equal to the heaviest work, and can be handled by one man.

An Adams Pointer should be included in your equipment. Send for further particulars and blue prints, which will give you full details.



Above cut shows machinery that is installed in a 26'-6" x 6' Special Lumberman's Pointer.

Adams Engine Co., Penetang, Ont.

J. T. PAYETTE, Proprietor

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean, heavy duty work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ⅜ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

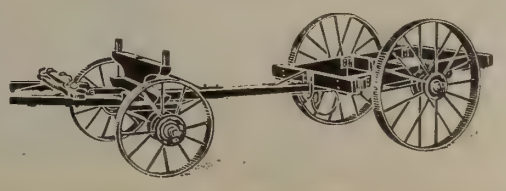
Tudhope-Anderson Detachable Lumber Trucks

Unequalled stand-up-ability on tough, rough and soft road-beds are the tests that explain the widespread popularity of these sturdy trucks among lumbermen. Cut shows Front Hauling Gear No. 41 coupled to Hind Gear No. 42. One or more Hind Gears may be attached or detached with ease.

Look at the wide tire steel wheels. They mean easy hauling. We guarantee them. Spokes may be renewed in case of accident—not so with others. Axles are high quality square steel ensuring many years' service. Wood parts are best oak, air-seasoned and kiln-dried. All parts well ironed and braced.

Built to the following specifications:—

No. of Truck	Size of Steel Axle	Tire Inches	Wheels Inches	Frame Length	width
41 Front Gear	1¾" square	4 x ½	26	....	....
42 Hind Gear	1¾" square	4 x ½	42	5 feet	40 inches



For descriptive circulars write

WHAT OTHERS SAY:—

"Your letter of February 15th received and we want to say that this was a very nice lot of lumber. It was good widths and lengths and well manufactured, dry stock and the grading was very liberal. We are sorry we cannot use more of this lumber at the present time. **WE RECEIVED SEVERAL CARS FROM OTHER MANUFACTURERS AT A CHEAPER PRICE, BUT THE LUMBER WAS NOT NEARLY AS SATISFACTORY.** When we are in need of more stock, we will take the matter up with you."

NOTE:—The above was sent to us February 24, 1921, unsolicited. Name given on application.

Bertrand Machinery Proves a Profitable Investment

Consider the purchasing of Bertrand Machinery as a profitable investment—not as an expense to be put off as long as possible.

If you are using equipment that is out-of-date, worn out, or inefficient, the wise thing is to replace it with modern machines. The increased production will not be long in paying for it.

Get in touch with us for full information.

Sturtevant
PUTS AIR TO WORK

What "Might Have Been"

A clean mill seldom takes fire. The above photo was taken at the C. P. R. Angus Shops and shows planers equipped with Sturtevant Exhausters.

One night, in a certain Canadian lumber district a large and busy planing mill took fire from **within**, and the morning sun looked down upon a smouldering heap of ashes.

Other mills in the neighborhood were beginning the day with "business as usual."

The owner of the destroyed plant as he gazed sadly at his more fortunate brethren, pictured mentally, what might have been **his** mill, had he too installed

Sturtevant
(TRADE MARK)
Planing-Mill Exhausters

This system kept the machines, the floors, and the interior of the mills—free from any accumulation of shavings, sawdust and dirt, thereby eliminating all risk of combustion and fire.

The installation of the Sturtevant System in your plant will materially reduce the insurance premium.

We have compiled a most interesting brochure describing the Sturtevant System as used for every type of industry—write for this bulletin.

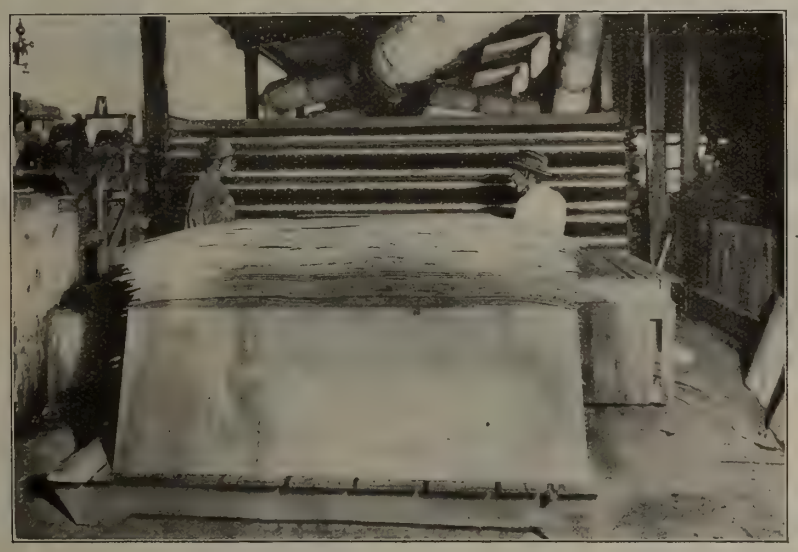
The Peter Gerlach Co.

Established 1854

Cleveland, Ohio



Receiving Wide Gum Veneer from One of the Two COE DRYERS in the plant of Nickey Brothers, Inc., at Memphis, Tennessee.

They have tried several methods of Drying Veneer, and say they are best pleased with the Coe Method.

This Dryer is noted for: *Its satisfactory service; Its labor saving; The high quality of it's product.*

The Coe Manufacturing Company

Painesville, Ohio, U.S.A.

We build all the Machinery for a Veneer Plant

Represented in Canada east of the Rocky Mountains by

GARLOCK-WALKER MACHINERY COMPANY, LIMITED.

32 Front Street West, Toronto, Ont., Canada.

Put your problem up to us

We are specialists in building locomotives. We build all types and sizes, also all kinds of repair parts for locomotives and tenders.

Our experience puts us in a position to give you expert advice as to what particular type and size of locomotive is best suited to your needs.

FIRE BRICK

AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

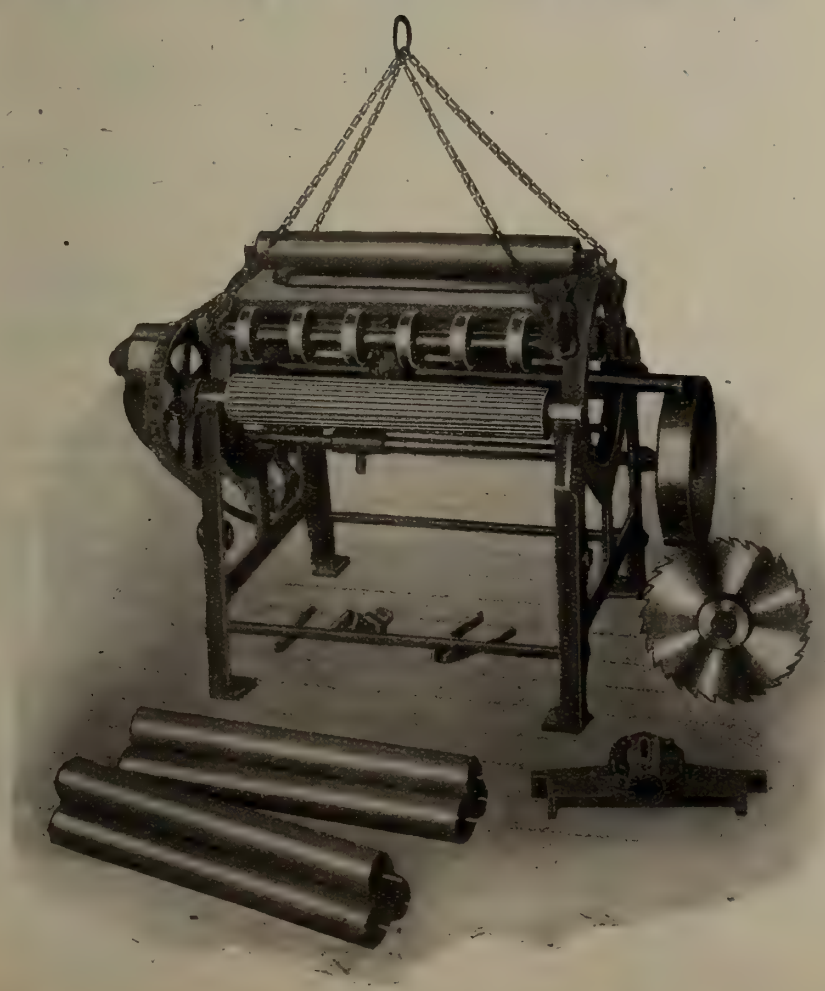
The Ideal Edger for Light Mills



Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

DRYING

VENEER—The "Proctor" Veneer Dryer fulfils the demand for an automatic dryer—efficient, economical and trouble-free in performance—which consistently dries all kinds of veneer perfectly flat and pliable. Prevents warping, checking and splitting

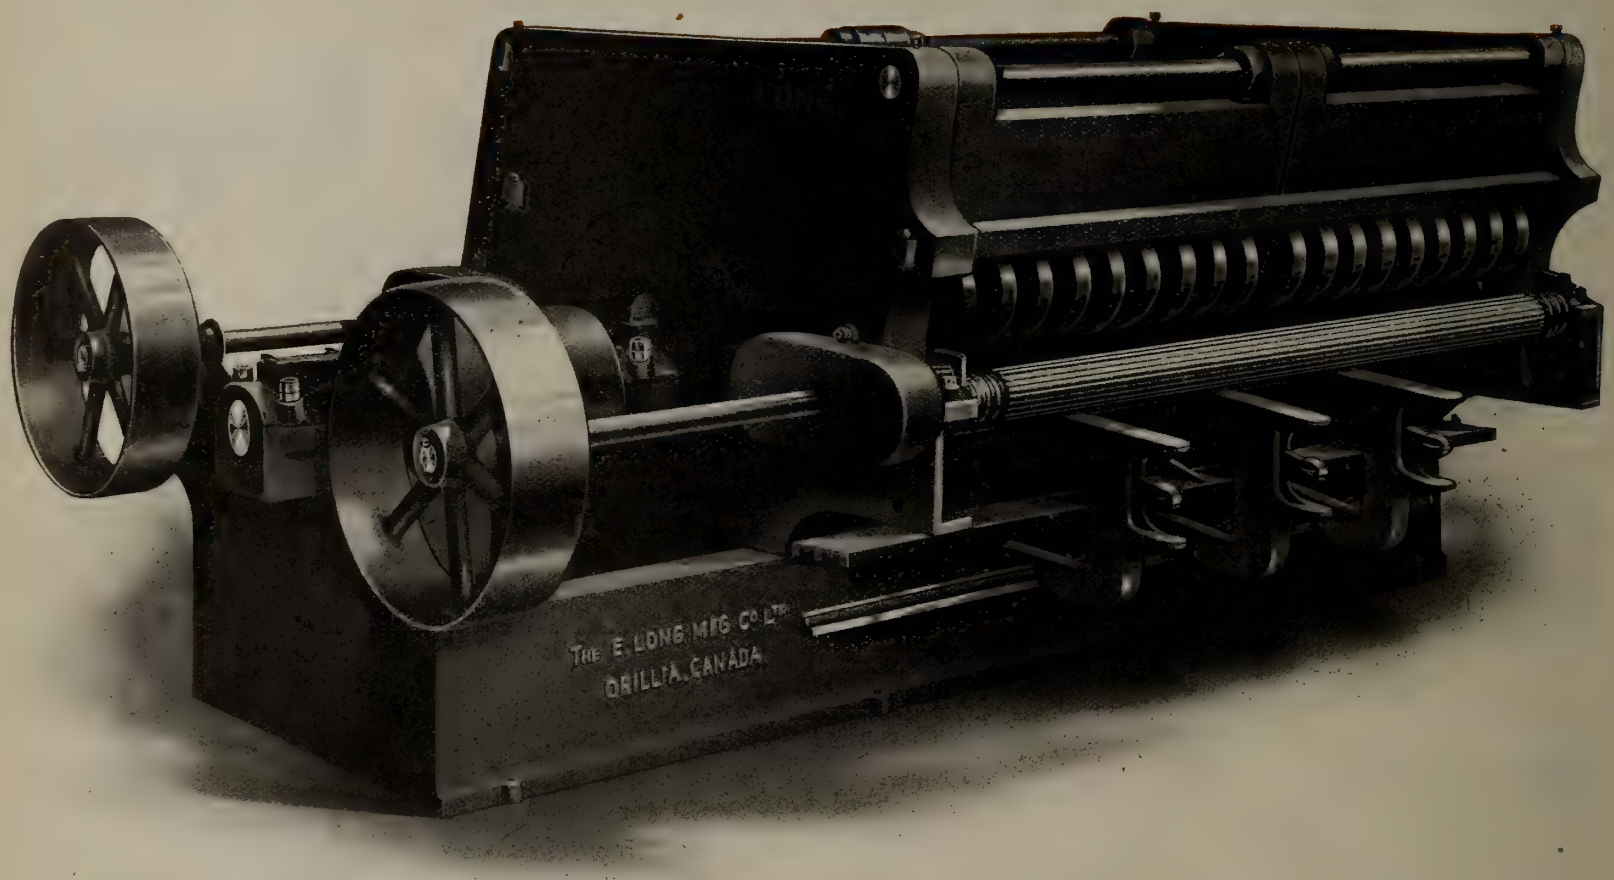
PROCTOR & SCHWARTZ, INC. Philadelphia

"Proctor" DRYERS

ANNOUNCING

our

New Heavy Duty Edger



This Edger is just one of a number of really modern machines this company is preparing to offer to the lumber manufacturing trade. It marks a step in advance over any other Edger yet put on any market.

The deep- solid bed, planed on the bottom, makes it easy to handle and install. In operation it completely encloses the sawdust. Note the solid side frames, the sawdust plate, the water cooled mandrel bearings, and the heavy press rolls, hung on just the proper angle.

The saw shifters move freely on rollers and lock in the position desired. Fully adjustable for fractional widths.

It is as good as it looks, let us send you full specifications.

Can You Afford to Ignore Their Economy?

Year after year, in mills all over the world, Waterous equipment has demonstrated a unique capacity for service.

This has been manifest not alone in the quality of product this equipment is producing but in the staunch and lasting resistance they exert against wear.

The steady advance of Waterous equipment into wide popularity, their increasingly secure hold on the preference of mill men, spring directly from this essentially practical cause.

Since the introduction of Waterous equipment, over Three Quarters of a century ago, there has never been a lapse in the Waterous policy, to embody in them the highest possible value.

Against increasing costs of production, by repeated and serious improvement, they have held intact their superior measure of usefulness and worth.

Can you afford any longer to ignore the economy Waterous products insure, or deny yourself a kind of service unapproached in any earlier type of equipment?

Because Waterous products and the sincere service behind them afford uncommon satisfaction, more people use Waterous products than any other kind.

Waterous

General Mill Supplies MONTREAL

What is your Sawmill Worth

to you if it doesn't stand up under the strain of constant service? If it doesn't give dependable service year after year with minimum repair expense?

The illustration of the feed works used in our medium sized mills gives a very clear idea of the good design and careful attention to details that characterizes our mills. The result is lower upkeep cost, less shutdowns, larger production—and more profits.

Ask for our new catalogue to-day.

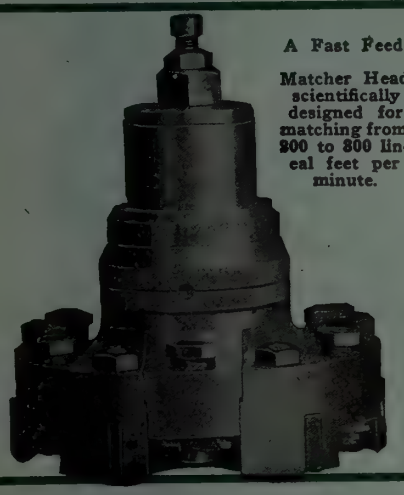
Specialists in LUMBER and WOODWORKING Plants

HEAD OFFICE: OTTAWA, ONT.



A Fast Feed Matcher Head scientifically designed for matching from 300 to 800 lineal feet per minute.

The SHIMER Fast Feed Expansion Matcher Head

With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings.
These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.
The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.
The circular cutter is then brought to its proper location.

The Cheapest and Best Head on the Market. WRITE FOR PRICES

Bartram & Ball Limited

511 St. Catherine St. W. - Montreal, Que.

We have at Vancouver the following quantities of Fir and Hemlock lumber manufactured by one of the largest and best mills on the Pacific Coast — a concern that enjoys the reputation of turning out the highest grades of lumber shipped from British Columbia.

The whole lot is in excellent shipping condition and can be shipped promptly. We have undertaken to move this stock quickly and we are able to quote prices that will allow us to move it.

If you are interested in Pacific Coast stock it will pay you to hold your orders until you get our prices. This block of stock is offered subject to prior sale; therefore, we would recommend that you wire us your inquiries.

Our Future Business

—Depends entirely on the service we give you now.

We cannot keep on growing if we look to you for business to-day and someone else tomorrow.

Repeat orders from customers who are pleased with our lumber, is essential to our continued success.

A large percentage of our business to-day is from people who have been buying from us for several years.

We ship you what you buy.

Hardwood

—when you need it

—as quick as you need it

FROM our Logansport, Indiana, Service Yard (near South Bend) we are able to make hardwood delivery in half the time usually required because we have exceptional car facilities.

Our capacity at this yard is 5,000,000 feet —consisting chiefly of Ash, Elm, Maple, Oak, Poplar and Hickory. Delivery of any of these items—all of the highest quality— can be made just as you want them.

And by that we mean that we will fill your order to satisfy you absolutely—you to be the judge of satisfaction.

Optimism—

Cannot always be termed a virtue. It is, however, a necessary adjunct to sane business vision in Canada.

WE need OPTIMISM in the lumber business but not ultra-optimism at the present time.

British Columbia's timber wealth is a noble heritage. He who exploits its commercial values is not an optimist.

There is no need for optimism —the fact is legion.

Our Faith in its market demand is established and is well founded.

THE President of the United States has declared for a national policy of administrative efficiency, for sound commercial practices, for the omission of unnecessary interference of government with business.

He has pointed with confidence to the forward course of the business cycle. He has declared for progress and action, in the process of readjusting to the new and normal plane.

One of his official family has declared his belief that this new normal plane so far as prices are concerned, should be upon the basis of an average advance of about 70% over pre-war prices.

Mr. Hoover, another of his official family, has indicated, in general, a highly constructive and comprehensive program in aid of and for the betterment of the general commercial and industrial situation.

Business already has a distinctly better tone; the outlook for the future is full of encouraging prospects.

Everywhere is noted the disappearance of that timidity which destroys business, and in its stead is seen the return of the spirit of confidence which is ever the herald of a progressively better business condition.

Will You Share in the Spring Home Building Campaign?

Figures available for the first two months of this year show a considerable increase in home construction over that of last year. Similar figures for proposed construction during the spring months also show increased activity, altogether, the coming season promises to be the biggest since '14.

This, of course, means plenty of real live business for the merchant who stocks up right. And this is where we can be of service—in supplying you with just the right grade of lumber the builder seeks. The prices we quote you are attractive, the service we can give is unexcelled.

Just write us for any information on the following;—Spruce, Pine, Hemlock, Hardwoods, Birch Flooring, Lath.

Sooner or later you'll handle

Because British Columbia Western Hemlock is a prolific seeder and not fastidious as to seedbed, it is bound in time to replace in building and other uses many of the timbers which are and have been in extensive use but which are fast disappearing from the forests.

But there are more reasons than just that why it should rank with other better known woods and take precedence over many.

British Columbia Western Hemlock is the lumber of the future, principally because of its superior merit, combining strength and endurance with lightness of weight, and possessing a finishing surface and an ease of working second to none.

We'll be glad to send you British Columbia Western Hemlock in mixed carloads, along with our other BIG CHIEF Brand Specialties—British Columbia Red Cedar Shingles, and Cedar and Fir Lumber in all sizes known to high class manufacture.

Don't Be Fooled About Fire Insurance!

¶ Fire Insurance is one of the most important things you buy, but that is no reason you should pay double price for it.

¶ For the past twelve years we have written fire insurance on most of the large Canadian Saw Mill Plants without an argument at the time of loss adjustment, and we have saved these Lumbermen thousands of dollars in their insurance cost.

¶ We make our own rates, we are licensed in Canada, and we give you a service that will hold your business as long as you have insurance to place.

¶ We confine our business to lumber yards and woodworking plants, where the physical hazard and financial standing will meet with our rules of eligibility.

¶ Perhaps we can only write a part of your insurance, depends upon the size of the plant, but it costs you nothing to take the matter up with us and it may be a big saving in insurance cost to you.

Address all communications to:—Lee Blakemore Inc., 942 McCormick Bldg., Chicago, Ill.

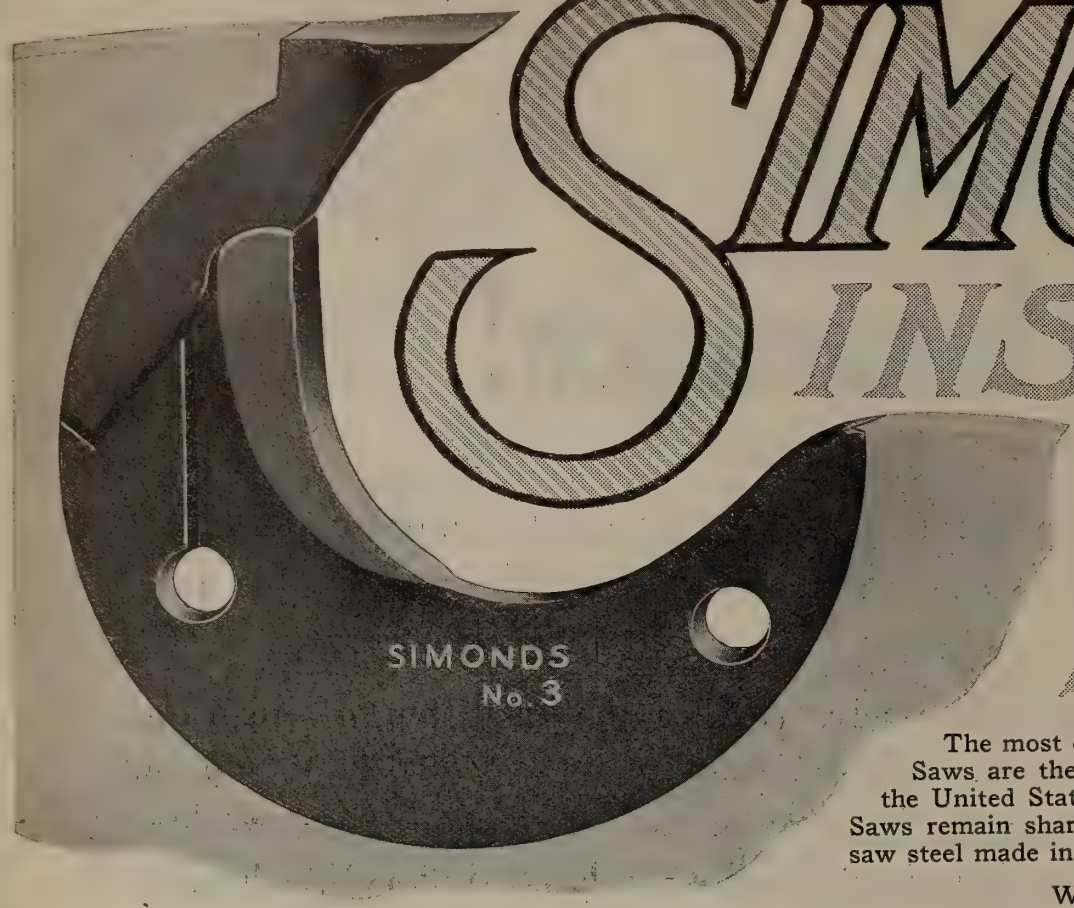
Attorney in Fact for the

Manufacturing Woodworkers' Underwriters

Send for list of plants on which we carry Insurance.

We have a Local Representative in each Province who will call on you upon request

Licensed in Canada and Legal Everywhere.



SIMONDS INSERTED POINT SAWS

The most conclusive evidence that Simonds Inserted Point Saws are the best is the great majority of users throughout the United States and Canada. The cutting points of Simonds Saws remain sharp and saw fast under heavy feed. High grade saw steel made in Simonds own steel mills sees to that.

Write us about your requirements.

"The Canada Lumberman" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills etc. "The Canada Lumberman" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and " For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Vol. 41 Toronto, April 1, 1921 No. 7

SUBSCRIPTION RATES

The postal rates on periodicals having been trebled on January 1st, 1921, the subscription price of the "Canada Lumberman" in Canada, United States and Great Britain has been increased to $3.00 a year; other foreign countries embraced in the General Postal Union, $4.00. Current subscriptions will be continued at the former rate until expiration of the subscription year.

When The Door of Opportunity Opens

With activity so prevalent on the part of mail order houses who are seeking to undermine the legitimate trade of the local lumber merchant, it behooves the latter to bestir himself in some respects and devote more attention to advertising his stock, his service and his facilities. Let him announce that he is prepared to meet any mail order competition that may come in his locality and not only afford the purchaser the benefit of personal selection but that he is right there to see that satisfaction is given in every particular and that everything which leaves his yard is up to the mark in grade, quality and workmanship.

It is true that gratitude is seemingly a lost characteristic on the part of many members of the community, who fail to recognize the worth and work of local tradesmen and the important part they fill in the upbuild and welfare of any centre, whether large or small. When many people desire credit, they seek to obtain it from the local lumbermen and other merchants, but when purchasing from some outside point, where cash has to accompany the order, they readily comply. Their whole attitude is so inconsistent that one can scarcely realize what kind of mental make-up they possess.

The local merchant is the real back-bone of any community. He helps pay the taxes, build the roads, construct the sewers, pave the streets and otherwise plays a part in the progress and expansion of the municipality in which he resides.

The action of the members of one of the newly-formed District Retail Lumbermen's Associations of Ontario in deciding to use the local papers to make known the fact that they are prepared to render splendid service, give prompt delivery and meet all mail competition prices, should have the effect of increasing their trade and keeping away from the various local towns goods that are frequently deficient in make, material and finish. As it is often necessary to fight fire with fire, so the encroachments of catalogue concerns in the lumber line may be checked by active, aggressive publicity on the part of the local dispensers of wood products and by their making known, through the press and other printed media, the stock they carry, the service they render and the fairness which characterizes the price of their products, and announcing that, in accordance with the trend of the times, quotations on the lumber in their yards have come down.

Now is the time to build and make repairs and improvements. Spring is the great season of structural activity, and any retail lumberman who intends to get into the business game for all he is worth should do some effective and forceful advertising, and do it now.

More Intimate Knowledge of Wood

"Getting Better Acquainted With Wood," was the subject of a forceful and edifying address recently delivered by Samuel J. Record, professor of forest products at Yale University, before a lumbermen's organization in New York city. After pointing out the wonders of wood, its purpose, plan and uses, how it grows and what it is worth to the people, and declaring wood to be one of the most remarkable substances in all the world, the speaker referred to the changes which had taken place in the lumber business in recent years and the need of adopting more up-to-date methods in handling and selling. He said that time was when only the select grades from choice trees of a few species were used. With depleted supplies lower and lower grades became merchantable and so-called inferior species found their way into the market. The eastern trade is also beginning to draw heavily upon the forests of the west coast. This means changed standards and changed methods of utilization. It calls for greater knowledge on the part of the salesman, and on the part of the manufacturer, because every new wood presents a new problem. The methods of seasoning, finishing, all the processes of manipulation must be adapted to each wood if satisfactory results are to be secured.

The lumber salesman should sell service. This hackneyed catchword should be made a living reality, his actuating motive. He should never intentionally recommend wood for any purpose for which it is unsuited. He should know his product, its bad qualities as well as its good ones, and where warning or special advice to the purchaser is necessary he should give it. Old rule-of-thumb practices are giving place to scientifically determined facts. Prejudices spring up quickly, live a long life and die hard, but they can be overcome, in part at least, by repeated demonstrations of their fallacy. They used to say, some are still saying, that you can't kiln-dry lumber without injuring its strength. It took nearly twenty years of research and demonstration to prove that kiln drying, even of the most refractory woods, was not only possible, but eminently practicable.

What the lumber business needs to-day is a more intimate knowledge of wood and a keener appreciation of the economic factors involved in the industry. These require exhaustive investigation and study.

Economic Expansion of Aerial Service

Recent reports in the "Canada Lumberman" indicate the expansion of the aerial service in connection with the survey of timber lands and forest protection work. Some of the pulp and lumber companies, such as Price Bros. and the Laurentide, are spending large sums in this direction, and believe that the outlay is and will prove economic. In the matter of timber surveying, it is claimed that an aeroplane or seaplane can, by photographing the forests, secure information as to the species and extent of the timber more accurately and cheaper than by ordinary cruising.

The capital outlay is large, and the running expenses are also considerable, while the operations are limited by climatic conditions. But even taking all these into consideration, those who are backing aerial operations, are confident that the results are not only more satisfactory, but are cheaper than those which can be secured by other methods. In fire protection work, it is obvious that aeroplanes perform very successful functions as aids to the usual protection precautions.

The Air Board at Ottawa is planning an extension of the work throughout Canada, in which the Board will be supported by the

provincial governments. Those governments, notably that of Quebec, which have experimented with planes, have found them of great value, particularly in the survey of lands, and, therefore, are prepared to spend more money in carrying out further work. It may be added that, from the national point of view, the expenditure of heavy sums in protecting and conserving our forests, is money well spent, and that the amounts so expended are insignificant compared with the saving involved by the prevention of forest fires, the most potent agent in the destruction of forest wealth.

Straight Selling Talk on Building

There appeared in the "Canada Lumberman" some months ago a series of excellent articles from the pen of a well known writer closely connected with the lumber business on the wisdom, economy and necessity of farmers properly housing their farm implements by erecting suitable and well-built sheds. It was also pointed out that retail lumber dealers should become acquainted with the various yeomen in their respective localities who had not proper accommodation for their tilling and harvesting equipment and demonstrate the advantages of taking good care of what they possess. Several retail lumbermen acted on the suggestion and the outcome was considerably increased business.

In a recent spring announcement of a representative Ontario dealer he makes special reference to the question of ample accommodation under the heading of "House Your Implements—We're Ready to Help You Do It." He emphasizes the fact that an implement house for storage purposes is an asset in every way and adds that they are comparatively cheap and necessary, while farm machinery is necessary but not cheap. Then follows a good selling talk, which while presented in a breezy, colloquial style, is nevertheless convincing and will be perused with interest. Here it is:—

> One thousand dollars' worth of farm machinery with best of care will depreciate about 10 per cent. each year. The loss on some farms is more than that amount because valuable farm implements are left out under the weather when they should be under cover.
>
> Each farmer needs a building separate from his other farm buildings designed for storage of implements away from poultry roost nuisance and danger from fire. Poultry is interesting and profitable on a farm but not among implements and waggons. You can turn a waggon wheel into a hen roost by rolling it. Frequently the hens turns the whole waggon into a roost without turning a wheel.
>
> When the hired man hitches up and climbs into the seat in the morning before daylight he expresses his opinion freely. With a good enclosed implement shed such accidents are not likely to happen.
>
> Better adopt the safety first plan and build a tasty good appearing house with close-fitting doors.
>
> It is a good way to fool the implement dealer. He expects you to buy in place of taking care of the old.
>
> We have plans of several implement sheds prepared and if you will write or phone us for particulars we will tell you what the materials will cost or give you the cost of the building fully erected.

He Profits Most Who Serves Best

This is the period when those who serve the public in the largest and most complete sense are the ones who secure the business. Sometimes price-cutting will create a sudden influx of trade, but such a policy is never sound in principle or permanent in results. Any gains made to-day are frequently lost to-morrow. This observation applies with equal force and pertinence to the lumber dealer as well as to the man who handles a general line of merchandise. The retailer, who cuts prices to-day, undermines those engaged in the same line of business. Perhaps he gathers in a certain number of dollars which otherwise would have gone to his competitors, but the customer who requires a bait of this kind in order to make purchases, will, on a similar invitation from a rival, transfer his trade there.

It is the steady, loyal, constant patronage of a greater or lesser number in any community which forms the strength and development of any business. Price-cutting is at the best a poor game for the enlargement of trade, for it is a proposition at which two can play. The practice is mutually destructive and in the end leads to no satisfactory results.

"But trade is dull," declares some retail lumberman, "and how am I going to move my stock or increase my turn-over if I do not slash prices or undersell those engaged in the same line as myself?"

One means of doing so is to increase the efficiency and scope of the service rendered and to build a strong superstructure upon the foundation of quality. Most people in this world, who win the largest measure of success, do so because they deserve the returns which they secure from their industry, energy, foresight and courage. It is the same, too, in connection with all great enterprises. These are the result of seeing a little farther ahead than the other fellow.

It may be enquired how can the retail lumberman render a wider, thoughtful and far-seeing service. This may be done in various ways. The alert retailer of forest products at the present time should make himself thoroughly conversant with the real building needs of his community. He cannot do this by sitting in his office looking out of his window and bemoaning the stagnant condition or non-progressive character in the neighborhood. He must get out and mix with the public, know its wants, its disposition, aspiration, problems and outlook.

In this connection a leading authority recently asked a retailer some specific questions. These will be read with much interest, and each lumber merchant may well enquire "How do I qualify?" for upon the character of the responses much of his success and prosperity during 1921 will depend.

Here are some of the queries put to the dealer.—How much business could be got if he had accurate knowledge of building that ought to be done, and would exert himself in the effort to convince property owners that building can now be done at costs which are reasonable?

How many dealers have the knowledge which will enable them to tell the average farmer approximately how much more money he could make from his stock if it were properly housed?

How many dealers know how much deterioration there is to grain that is stored in poor granaries?

Can the average dealer in building materials give a farmer any information as to the increase he can get in the egg production of his chickens if he houses them in a properly built chicken house?

How many retail dealers have the ability and disposition to convince a farmer that he and his family will be better able to meet the responsibilities of each day if they live in a conveniently arranged and properly built home?

In discussing the present railway situation, Mr. J. G. Scott, of Quebec, has a good word to say for the Transcontinental, particularly as being the means of developing the forest resources of the districts which it serves. He claims that if the line was not handicapped by charges which it should not bear, and was better operated, it would show a surplus. Mr. Scott points out that the line runs through spruce forests, touches great water powers, and is developing the colonization of the clay belt with marvellous rapidity. There are 15,000 new settlers in the Abitibi district, which six years ago was a solitude. They have built sawmills which cut sixty million feet of lumber per annum. In clearing their land they make traffic for the railway in the shape of pulpwood, and they are building up a chain of population to unite the east and the west; a work for which they are entitled to the gratitude of the nation.

N. Wikander, of Stockholm, Sweden, who is superintendent of a large pulp plant in that country for some years, and has also been engaged in the lumber line in Sweden, recently reached British Columbia with the object of studying pulp conditions and methods in that province. He states that since the end of the war, the pulp trade in northern Europe has improved greatly. During the war, conditions were serious, but to-day the demand is increasing and prices are high. Wages in Sweden, he says, are also excessive, labor in the woods receiving as much as $4.00 a day, which in Europe is regarded as very high.

The Planing Mill and the Retail Lumber Yard

By "Production"

It is doubtful if there are any of us who will not stop and watch a machine in operation, be it large or small. To-day, when we see on every hand a desire to eliminate manual labor and perform tasks with machinery, we hear much discussion regarding the profit or lack of it attached to planing mill operations.

Be that as it may, there are those with a large investment in mill machinery, who cannot afford to scrap their equipment but must watch each and every leak and be ever on guard to prevent loss and waste.

The man operating a mill in an average town has possibly less worry in regard to this than the city man, as his trade does not demand the same degree of perfection as the clientele one must cater to in larger centres.

We are not endeavoring to help the city mill owner so much as the man operating a planing mill in the average sized town.

He, it is whose investment is his all and, without judicious care and watchfulness it may become more of a liability than an asset. While it may be true that a planing mill in connection with a lumber yard is not a paying proposition, we will not attempt to argue that either for or against, but will endeavor to point out a few helps for the man having one.

One of the best investments which our mill owner can have is his dry kiln, or if his equipment is not complete in that line, he should have a few lengths of pipe in a small box wherein he can heat what odd pieces he requires to glue up.

In these days of green lumber, the dry kiln pays for itself many times over in that one can complete his contracts often several months sooner than he expected.

Should a mill man not have a standard dry kiln, it will not tax his ability too much to erect one and heat it with the exhaust from his engine or direct from the boiler so that with little effort and the expenditure of a few dollars for pipes, he can have an able assistant in his plant.

Having regard to the proper piling and care of the lumber in his yard and watching each pile as it becomes ragged, he can often save time and space by bringing the last few thousand feet of any one line into the mill and working it up into whatever it is best suited for. In doing this, he has very little odd lumber about his yard and should have his piles in first-class order. That, to my mind, is one salient point in favor of a mill in that the owner can turn his stock into various forms and with thought can often reduce a pile of slow-moving stock to something which he is able to convert into money.

As an illustration, let me cite the case of a man in Western Ontario who had a large pile of twelve inch cedar boards and found them becoming a rather backward seller. He sorted out the best end of the boards (which were No. 1), and took them into his mill and ripped sufficient strips from them to make all the casings required for five or six houses; in fact he was able to obtain all the strips required for the jobs with the exception of the window sills and a few odd members which required to be of more than the usual thickness. As well as securing sufficient good boards to give him this trim, he had left a goodly number of boards which filled his requirements for the ordinary trade.

In speaking of the possibilities of using the machines to assist one in carrying less stock and always keeping it moving, another illustration might not be amiss. A carload of 2 in. x 4 in. yellow pine dimension yielded approximately half its number as being better than ordinary studding. They were re-sawn and manufactured into beaded ceiling and V sheeting.

Whilst possibly these two illustrations might be used if one were attempting to justify the existence of a planing mill, they are presented as being examples of what a man operating a mill and yard combined must do in order to obtain the best possible results from his investment.

The care given his lumber must reflect in a vast degree the amount of thought which he gives to the handling of his stock. If his yard presents the appearance of being continually in an uproar or a state of chaos, he has not apparently grasped the idea that he has assistants in his dry kiln and machines for helping him to keep his stock always in a state of readiness, and appearances are often the means to a sale.

Possibly the greatest cause of worry to the millman is the large amount which he finds necessary to charge to handling. Much can be eliminated if he places his machines so that they feed towards his storage sheds, and often he can, with live rolls, feed the finished stock for a considerable distance and thus do away with carts and manual labor.

If he can lay out his yard so that the following is an approximate order of the movement of the stock, it will assist him in casting up a balance on the right side of his ledger at the end of the year.

If he has a siding, he should commence to pile near the tracks and continue piling so that the lumber will leave the pile, and if not requiring to pass through the mill, it will go out by way of the office. If the mill is placed at the point nearest the office or shipping department, all stock requiring to be milled, will move directly forward at all times, and there will be no necessity of doubling back from the pile to the mill.

After milling, the stock can be passed to the shipping or storage sheds or loaded directly on to the waggon and move out of the yard to its destination.

The order in a yard and mill to obtain maximum results should be **source of supply**—either siding or entrance for teams drawing from cars—then the **piles stretching** from the siding to the mill with possibly a separate arrangement in front of the mill for piles of dimensions after being sized. Following the piles we would have the **mill**, through which all the lumber can pass directly to the load or storage sheds or, in the case of sized stock on to another pile. After the mill, we have our **storage sheds** for the finished mouldings, trim, etc., and space for piles of sized dimension, etc. Then comes our office fronting on the main street.

Of course, such an arrangement would be the perfect lay-out for the ideal yard, yet we can, by careful attention to detail, make our average yard conform to a strict routing of stocks and save much time and labor at present wasted in handling the stock many times.

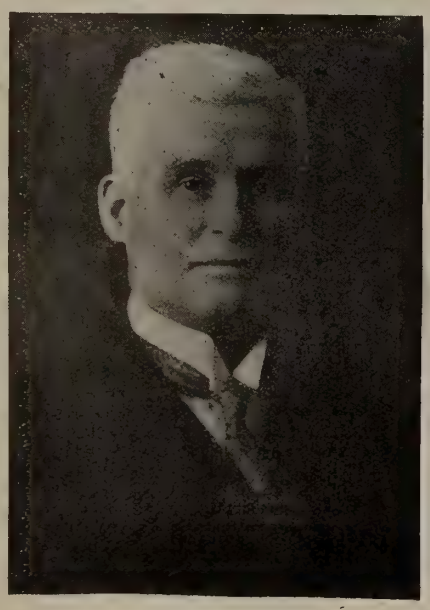
While it has been a question in the minds of many whether a mill operated in connection with a yard is a source of loss or profit to the owner this does not prevent the man owning one from making the utmost out of his possession; nor should he become slack in the care which he should exercise in seeking constantly to improve his methods.

Representative Eastern Lumbermen Will Serve Another Year

Wm. Richards, Campbellton, N.B.
Re-elected Vice-President.

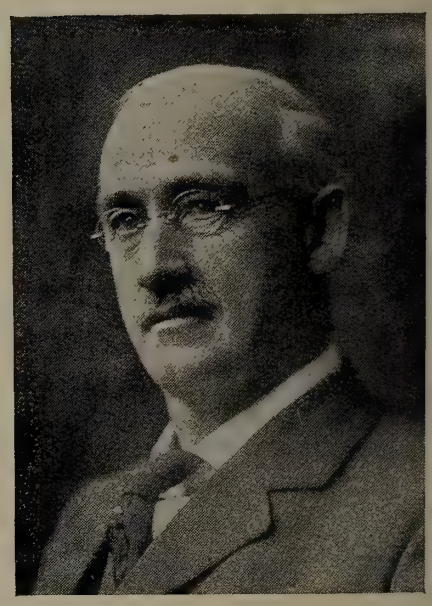
R. W. McLellan, Fredericton, N. B.
Re-elected Secretary-Treasurer.

W. Garfield White, Sussex, N. B.
Re-elected Member of Executive.



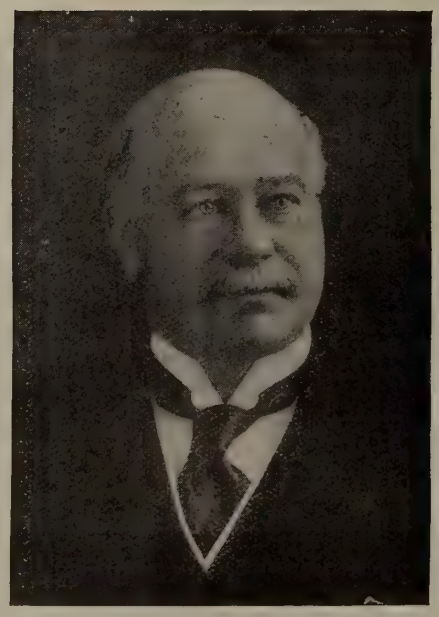
Angus McLean, Bathurst, N. B.
Re-elected Member of Executive.

James Robinson, Millerton, N. B.
Re-elected Member of Executive.



George Herbert King, Chipman, N. B.
Re-elected Member of Executive.

F. C. Beatteay, St. John, N. B.
Re-elected Member of Executive.



W. B. Snowball, Chatham, N. B.
Re-elected Member of Executive.

J. W. Brankley, Chatham, N. B.
Re-elected Member of Executive.

New Brunswick Lumbermen Annual Session

Discuss Operation of Public Health Act, Demands Formulated by Labor and Other Matters—Association Considers Aeroplanes too Expensive for Fire Protection

Donald Fraser, Plaster Rock, N.B.
Re-elected President of Association.

The annual meeting of the New Brunswick Lumbermen's Association was held in the Board of Trade Rooms at Fredericton on Friday, March 18th. There was a representative attendance and a number of matters of importance came up for consideration.

Donald Fraser, of Plaster Rock, N.B., president of the association, presided, and among those present were J. W. Brankley (Miramichie Lumber Co., Chatham, N.B.; James Robinson, Newcastle, N.B.; F. C. Beatteay (Stetson Cutler & Co.); St. John, N.B.; George King (King Lumber Co.), Chipman, N.B.; W. H. Priest (Dalhousie Lumber Co.), Dalhousie, N.B.; W. E. Gunter (Murray & Gregory), St. John, N.B.; David Ritchie (D. & J. Ritchie Co.), Newcastle, N.B.; Leonard O'Brien (O'Brien's Limited), South Nelson, N.B.; Stanley Douglass (Stanley Douglass, Limited), Douglass, N.B.; George Schryer (Bathurst Lumber Co., Limited), Bathurst, N.B.; Fred Anderson (Shives Lumber Co.), Campbellton, N.B.; W. S. Richards (Richards Mfg. Co.), Campbellton, N.B.; Charles Fenderson (Louison Lumber Co.), Jacquet River, Que.; W. B. Snowball (J. B. Snowball Co.), Chatham; Donald Fraser (Fraser Companies), Edmundston, N.B., and R. W. McLellan, Fredericton, secretary-treasurer of the association.

Secreary-Treasurer McLellan stated that a few days previous to the annual meeting the executive of the association had met a representative gathering of the manufacturers and members of the Canadian Manufacturers' Association to discuss the demands formulated by labor leaders and by them presented to the Government. The meeting of the lumbermen was held for the purpose of making an answer thereto, and after full consideration they attended in a body before the Government to answer these demands and to explain to the members of the executive how each industry would be adversely affected by the demands.

In the financial report Mr. McLellan also showed that the association had a good balance to its credit.

Enforcement of Public Health Act

Hon. Dr. W. F. Roberts met the members of the association and discussed with them the subject of vaccination of employees. Dr. Roberts, who is the Minister of Health for the province, was accompanied by Dr. George G. Melvin (chief medical officer of New Brunswick). They talked over the smallpox regulations of the Public Health Act as it applies to lumbermen and employees. Dr. Roberts addressed the gathering on lines supporting the legislation in connection with the smallpox, already on the statute books, and Dr. Melvin spoke along the same line.

Excerpts from the Public Health Act of 1918 as amended in 1919 and 1920, were produced at the meeting, and are as follows:—

> "No person shall be employed in any camp, ship, factory or other place wherein the employees come at frequent intervals into close and prolonged contact one with another, unless and until such person produces to the employer or the employer's rpresentative, a certificate signed by a regularly qualified medical practitioner, of successful vaccination, or of a like signed certificate that he is immune to vaccinia as proven by three consecutive non-successful vaccinations, or that he is immune to small-pox by reason of having had the disease, and no employer shall employ any person in employment as set forth above, without such certificate being produced.
>
> "When any personn contracts small-pox, who is at the time of the inception of his sickness, employed as set out in this section, or who was so employed within fourteen days prior to the inception of his sickness, and who has not complied or been required to comply by said employer or employer's representative with the foregoing provisions prior to his employment, then in such case the employer shall be primarily liable to pay all such costs, charges and expenses as the sub-district Board of Health concerned may have incurred in necessarily protecting the public health: provided such charges, costs and expenses were incurred in or about the necessary precautions relative to, or immediately appertaining to, any such case of small-pox, and such costs, charges and expenses may be used for and recovered with costs in the name of the Chairman of the sub-district Board incurring the same, in any court of competent jurisdiction, within six months of the recovery or death of any such person.
>
> "Such liability shall be in addition and without prejudice to any liability for any penalty provided for any violation of the provisions of this Act.
>
> "The terms and conditions of this section shall not become operative until the first day of July, A.D., 1920."

A general discussion took place between Dr. Roberts and the members of the New Brunswick Association, which proved enlightening and instructive, and it was finally understood that the provisions of the Health Act did not particularly apply to men employed in log-driving operations or those engaged in lumber mills. A hearty vote of thanks was tendered the doctor for his courtesy in appearing before the Association.

No Aeroplane Fire Protection Yet

A motion was carried to the effect that there be sent to the Hon. C. W. Robinson, Minister of Lands and Mines, a carefully-worded letter, expressing the disapproval of the meeting of the adoption of aeroplane fire protection, as such is considered to be only in its experimental stage, and doubts are held as to the efficiency of such service. It was considered by the Association that the expense of the undertaking was too great at the present time.

The election of officers was then proceeded with and it was decided that the old Executive Committee be reappointed. This committee is composed of Donald Fraser, W. B. Snowball, F. C. Beatteay, J. W. Brankley, Wm. Richards, W. Garfield White, Angus McLean, James Robinson, and George King.

Donald Fraser, of Plaster Rock, was re-elected president for the coming year; Wm. Richards, of Campbellton, vice-president, and R. W. McLellan, of Fredericton, secretary-treasurer.

The meeting then proceeded to the election of a standing committee to take up with and meet the Minister of Lands and Mines for the further discussion of subjects referred to in the Association's conference with the Minister, and also to watch legislation re Workmen's Compensation Act, Public Health Act, and generally to watch legislation as it effects members of the Association at the present session of the legislature, and to take such action as circumstances require, and in the best interests of the members.

The following comimttee, called the "Legislation Committee," was nominated and appointed:—Fred Anderson, George Schryer, J. W. Brankley, W. B. Snowball, Donald Fraser and R. W. McLellan.

It was suggested that such committee endeavor as early as possible to have a conference with the Minister of Lands and Mines, and a tentative date of 29th March was fixed upon.

It was said after the meeting that the Association might make a move for a reduction of stumpge on lumber cut on Crown Lands. Hon. C. W. Robinson, Minister of Lands and Mines, when the matter was mentioned to him said the stumpage rate was now fixed at $5.00 and he had no reason to believe it would be changed; in fact, he said he believed the lumbermen expected to pay the present rate.

T. J. Stewart of Ames, Iowa, in a letter to the "American Lumberman," says: Inquiry No. 116, published in your paper on Nov. 30, 1920, located the largest sawmill at Clinton, Iowa. The largest, so far as I can find out, was the famous J. R. Booth mill at Ottawa, Can. It was equipped with 22 bandsaws and cut 1,100,000 feet a day and had 1,580 men on its payroll. This mill was wiped out by fire some years ago and replaced by the present structure at the Chaudiere Falls, which cuts from 40,000,000 to 50,000,000 feet during the sawing season.

Wholesale Lumbermen Listen to Other Trades

Conditions Which Brick Manufacturer, Plumber and Hardware Man Have to Contend With Reviewed in Bright Addresses—Business Outlook Improving

Increasing in interest and continually growing more instructive in character, are the monthly meetings of the Wholesale Lumber Dealers' Association.

At the last gathering on March 18th terse and timely addresses were heard from allied industries and their relationship to lumber in connection with building operations. Among the speakers were J. L. McCannell, president of the Milton Pressed Brick Co.; Hugh S. Wallace of the Standard Sanitary Mfg. Co.; and J. R. Teeter of Aikenhead Hardware, Limited, Toronto. Each dealt with his own specific problems, explained some of the difficulties that had to be overcome and the obstacles encountered in the way of manufacture, production and distribution. All the speakers were well received.

A. K. Johnson, chairman of the Enterainment Committee stated that it had been decided to hold a dance under the auspices of the Association in the Masonic Temple on Friday April 8th. It was expected that there would be a large attendance, and the committee was confident that the event would be a great success. This will be the first function of a social character,(outside of the annual excursion which took place to Grimsby Park last year), held under the auspices of the organization.

J. P. Johnson, in reporting for the Membership Committee, stated that there had been an addition of one to the ranks, making the total number of firms now in the Association 52.

H. G. McDermid, on behalf of the bureau of Information, stated that 40 out of 41 firms had promptly reported last month. This was, indeed, a gratifying showing.

On motion of W. R. King, seconded by N. C. Hocken, a message of condolence will be sent to the family of the late J. G. Cane, of Toronto, who was a valued member of the Association. It was also moved that a similar expression of sympathy be forwarded to the family of the late Roy Stewart of McCormack & Stewart, Hamilton.

The members of the Wholesale Lumber Dealers' Association learned with deep regret of the shooting of Luther P. Graves of Buffalo, son of the late L. P. Graves of the firm of Graves, Bigwood & Co., Toronto, and Graves, Manbert & George, Buffalo. The late Mr. Graves was a brother of Chester W. Graves, who is a widely-known lumberman in the Bison City. It appears that Mr. Graves was deliberately shot down by one of two men who either had a grievance against him or else mistook their victim for someone else. He had just put his automobile away and was on his way to his home when he was murdered. Mr. Graves was a former army officer, a Yale man and was prominent socially. His death is one of the most baffling murder mysteries ever known in Buffalo.

Among the visitors who spoke during the evening was W. A. Filion of E. H. Lemay, Montreal, who expressed the hope that the lumber business would soon improve.

Progress in Making of Bricks

Chairman Eckardt stated this was a period of deflation in prices which were decreasing very rapidly, and he was pleased to welcome representatives of allied industries who would have something to say regarding how these industries were being affected at the present time.

Mr. McCannell of the Milton Pressed Brick Co. said that his firm had reduced the price from $2.00 to $4.00 per M on face brick, or what was known as rough texture brick. He spoke of the progress that had been made in brick-making, during the past few years, and the different kinds of brick turned out in the soft mud brick, the dry pressed and the stiff mud or rough texture brick. Down draught kilns, burning coal or producer gas, were now largely used, and the stiff mud brick was made in practically all colors—red, brown, black, purple, blue, etc. He believed that it was in the interests of both the lumberman and the brick manufacturer to travel along together, as they had many interests in common. His company was not operating on a large scale at present in Milton, and wages had been reduced by 20%. The scale of wages in Toronto had, however, not come down as yet. Mr. McCannell was pleased to report that the outlook was improving all the time so far as his industry was concerned, and declared that in the production of brick, the labor constituted 40% to 45% of the cost. The price of ordinary stock brick to-day was $22.00 delivered, and good face brick, delivered, from $30.00 to 35.00. Quotations which prevailed were about the same as those which held in May last when coal and labor both ascended and the price of brick went up accordingly.

Mr. McCannell announced that he was willing to answer any questions which the members might put to him. An interesting discussion followed in which it was stated that bricklayers to-day were laying practically twice as many bricks as they did a year ago. Where artisans had laid only 400 to 500 a day in 1920, they had now speeded up to 800 and 900 daily.

What Plumbers are Up Against

Mr. Wallace, speaking for the plumbing interests, stated that there was not the building there should be at the present time because investors, contractors and speculative builders did not yet seem convinced that prices of materials had struck bottom and were loath to undertake construction and find, possibly, in a few months that there might be drastic reductions in labor and materials. If such took place, a builder would lose his equity, or nearly so, in whatever job he had in hand. Stabilization of prices was one of the chief requisites at the present time. Mr. Wallace said that his firm sold only to jobbers and distributors. He believed that the last six months of the present year would be better for every line of business than the first six months, or, in other words, that conditions would largely parallel those of 1919. Like many other concerns, his own had a warehouse stocked with goods which were made from materials when peak prices prevailed, and on these articles they would have to take a loss. Their plant was only operating part time. Labor and other overhead costs had greatly increased the price of the finished product in the plumbing line just the same as in the lumber business. The tree itself might not be worth any more but by the time it was converted into lumber, the extra cost was very heavy, and the same condition prevailed in connection with metal and minerals, when labor and overhead expenses were added. Mr. Wallace did not think that if a few cents were taken off the carpenter's or the plumbers' hourly wage, it would reduce the outlay for construction very much. He added there must be a reduction all along the line. Of one thing, however, he was confident, that we would never see pre-war prices again. The days of such low values had passed, never to return. Labor was its own worst enemy in seeking to curtail production of its members.

Continuing, Mr. Wallace declared that stabilized prices and taking away some of the restrictions of the output of labor should result in building operations being resumed in a short time. With loan companies advancing only forty per cent of the estimated value of a house and money carrying eight per cent., there could not be expected on the part of the public any great lessening in building costs. There had been a decrease of about twenty per cent. in the wholesale price of enamelware, and the figures were now down to where they were in January, 1920, when prices were at the top up to that time. Answering a question in regard to plumbing costs, Mr. Wallace said that a five-piece set, as the trade called it, in an ordinary eight-room house to-day cost on the average from $400 to $425 and in 1912 and 1913 the figure was about half this amount. The reduction in the cost of heating equipment had been about ten per cent.

Trend of Hardware Quotations

Mr. Teeter, speaking for the hardware interests, said that such a supply played a small part in ordinary house construction. When everything was taken into consideration in the cost of a home, the hardware outlay did not amount to more than two or three per cent. In the iron and steel industry plants, which a year ago could not make deliveries and were months behind in filling their orders, were now looking for business, and it appeared as if prices were down to the bottom. Business in the United States had undergone a slump but was now slowly but surely reviving. The automobile industry used about five per cent. of the total iron and steel products turned out but the railway and agricultural interests were by far the largest consumers. Tools, which the hardware merchant handled, cost three to four times what they did before the advent of the war and were not nearly as good or as finely finished. Builders' hardware had advanced two to three hundred per cent. over pre-war quotations. Mr. Teeter stated as far as possible his firm purchased all their supply of shelf and heavy hardware from Canadian manufacturers. Notwithstanding that the manufacturers in the Dominion enjoyed a protection of fifty per cent. in the matter of duty and exchange, yet their prices were in, not a few instances, higher than those of American production. Architects reported generally that they were busy with a large number of plans and with a reduction in the price of materials the speaker looked forward to a fair year.

Lumber Activities of Nova Scotia Discussed

Cut Last Year Exceeded Normal Production by Five Hundred Million Feet—Necessity of Increasing the Annual Yield from Forest Growing Lands

By Hon. O. T. Daniels, Attorney-General of Nova Scotia

Hon. O. T. Daniels, Halifax, N. S.

Both favorable and unfavorable conditions prevailed in the lumber industry of Nova Scotia during 1920. The weather was distinctly propitious for lumbering operations, being cold with a great deal of snow and ice. The high cost and scarcity of labor, however, militated against very profitable operations. The estimated lumber cut was 350 million superficial feet. This exceeded normal by about 500 million feet. The total production was valued at approximately $12,250,000.00.

The average cost f.o.b. cars at railway stations or over the rail of vessels ranged from $22.00 to $32.00, making an average of $29.00 per thousand.

At the beginning of the year market conditions revived considerably and continued fairly brisk well on into the spring. Several shippers had large stocks on hand carried over from the previous year and these supplies, especially the hardwoods, were sold at handsome profits. After the first of June, however, the markets declined and, although the dropping of the freight rates from 300 shillings to 200 shillings per standard led to considerable stocks being forwarded to Great Britain, much of this had to be sold cheap or yarded. Considerable lumber was shipped to South America, Madeira, Cuba and the West Indies. The United States market in conjunction with the English market was stronger the first six months of the year, the premium on United States funds being an item of great importance to the shipper. This market also began to drop during June and July and was stagnant by the end of the year.

No great amount of pulp wood is cut in Eastern Nova Scotia. Considerable quantities are produced, however, in the western counties of the Province, although, generally speaking, Nova Scotia is not a large producer of wood pulp.

Prime Necessity for Forest Conservation

The timber lands are practically all owned by private interests in fee simple, and in many cases it is necessary that steps be taken looking toward the conservation of these wooded areas. Fire is the deadliest enemy of our forests. It is a deplorable fact that our forest fires generally result from the carelessness of some irresponsible sportsman. During the past year 113 forest fires occurred in Nova Scotia. These fires swept over 777,500 acres of forest land. We all believe, however, that better days are ahead when the practice of conservative, safe and sane forestry in our Nova Scotia wood lands will be widespread. The rapid demolition of our forests, now in progress, will ultimately force such a practice, but the danger lies in prolonged delay. The large operators are becoming interested They recognize the prime necessity for intelligent conservation. They realize that when the present stands of timber will be gone the time for action will be over.

The lumber statistics for 1920, which the writer has compiled, proves that Nova Scotia continues to hold a leading place as a producer of timber and lumber products. As already stated, the total cut for the past year possessed a value as raw material of $12,250,000, but this by no means covers the full value to the province of the lumber industry. The raw material is converted into various articles of merchandise such as pulp, ship-timber, barrels, boxes, railroad-ties, shingles and lathes. The manufacture of these supplies adds a further value to raw lumber and affords employment to large numbers of men.

We have ample area of forest growing land in Nova Scotia and throughout Canada over and above any probable lands for farm crops, most of it, indeed, unfit for cultivation—an area ample to meet all of our timber requirements if its timber-growing capacity is but put to use. On every hand we are told to increase production as the cure of our economic ills. I submit that increased production from forest land is as necessary as increased production from human labor. As Col. W. B. Greeley, Chief Forester of the United States, has said—the answer to the forestry problems is not to use less wood but to grow more, to put our idle acres of burned and logged-off timber land at work growing trees. This is not inherently a difficult thing to accomplish. Three-fourths of it lies in preventing forest fires. But it does require an aggressive national policy of forest conservation.

Value of 1920 Forest Products

The following list compiled from the best sources available gives the estimated value of forest products for the Province during the year 1920:

Lumber	$12,250,000
Cordwood	5,150,000
Staves, fish, apple and potato barrels and boxes	1,900,000
Pulp	1,560,000
Christmas trees	50,000
Hoop poles	50,000
Pit props and booms	750,000
Telegraph and Telephone poles	50,000
Railroad ties	500,000
Poles, rails, stakes and posts and boards for fences	250,000
Ship timber and knees, etc.	250,000
Laths	250,000
Wharf timber and piling	250,000
Shingles	150,000
Miscellaneous as weir stakes, clothes pins, tan bark, maple sugar, etc.	150,000
	$23,810,000

Vital Remedies for Forest Depletion

In a series of public addresses given before such bodies as the Empire Club of Toronto, Mr. Robson Black of Ottawa, Secretary of the Canadian Forestry Association has been setting right many popular misconceptions concerning the forestry situation in the Dominion. One such reference was made during an address at the King Edward Hotel, Toronto, before a large luncheon assembly of business and professional men, when Mr. Black asked and answered the question: "What remedies for forest depletion are being applied?"

The pulp and paper companies of Canada have openly and sincerely committed themselves to the principle of "sustained forest yield'.' They have recognized the necessity of "anchoring" the forest as rigidly as they have anchored their mill dams. Fifteen companies have established forestry branches within four years. Several are replanting millions of trees on barren areas. The pulp and paper industry is as diligently in search, as any Canadian government, for a workable scheme by which each square mile of timber shall be operated as a self-reproductive forest crop.

"The moment the business and professional men of Ontario and the farmers and labor men who have most to lose, plainly say that the forest resources belong as much to the people of 1998 as to the people of 1921, when they say that our timberlands are a rich treasure-house that devastation must not touch, the job of conservation is an accomplished fact. Just now the weakness is that not sufficient Ontario men believe that thing with the usual Ontario tenacity and are willing to say it out loud."

Mr. Black countered the common view regarding reforestation by stating that the major undertaking in Ontario is not to plant trees by human hands, but to take the utmost advantage of the hundred of millions of infant trees scattered through our forests by natural processes. The main job of replanting Ontario's cut-over lands will be done by Mother Nature herself, although in many locations she already has refused to do her part in face of violations of almost every engineering and biological law.

"Before the term 'forest conservation' can become much more than an amiable password, we must elevate the forest resources into the very front rank of public policies and take on the job associated with their management as a first concern in our national economy. I speak of the forest areas of Ontario, not as the private business of the limit holder, but as a public asset of incredible richness vested to the extent of 90 per cent. in the name of the people of Ontario. It is true that we have alienated or rather leased (mostly for a useful purpose) much of the timber growing thereon, but, by the retention of the land title, we cannot alienate the responsibility of the whole people as chief conservator," Concluded Mr. Black.

Retailers Will Fight Mail Order Competition

Niagara Peninsular Lumbermen are Aggressive and Decide Upon Extensive Advertising Campaign to Make Known Their Products, Service and Prices

Many matters of timely importance to the retail lumber trade, such as mail order competition, advertising, insurance, credit bureau, planing mill costs, plan books and discounts to contractors were discussed at a special meeting of the Niagara Peninsula branch of the Ontario Retail Lumber Dealers' Association, held at the Dexter Hotel, Welland, on Saturday, March 19th.

This was the first gathering of the members since the organization of the district on January 22nd at Niagara Falls. Considering the almost impassable condition of the roads and the unfavorable weather, there was a good attendance. K. J. Shirton of Dunnville, chairman, presided, and among those present were James Harriman, Niagara Falls; A. Bailey, Hagersville; Fred Barraclough, Cayuga; O. W. Rice, secretary, Welland; S. L. Lambert, Welland; G. B. Van Blaricom, editor "Canada Lumberman," Toronto, and others.

The first matter that came up for discussion was mail order competition. It appears there is one particularly aggressive concern in Hamilton, which has been flooding Western Ontario with literature offering many alleged "bargains" in mouldings, casing, plate rails, picture moulding, base and other lines of interior trim. Mr. Shirton stated that not only did he get a catalogue but all the employees in his office and his workmen as well were recipients of the illustrated literature, showing how the publications were being sent out broadcast by the Halliday Company of Hamilton, who call themselves "factory distributors."

Material Not Up to the Mark

Mr. Rice stated that he had ordered a small quantity of stock from this concern in the shape of hand rail and a few mouldings. The material was poorly manufactured, was deficient in grade, uneven in finish and not nearly as good as could be turned out in his own plant.

The catalogue of the Halliday Company was, during the meeting, gone over carefully and on the leading items it was found that, in practically every instance, the lumber dealers of the Niagara Peninsula were supplying the material desired at the same price as set forth in the catalogue and, in a number of cases, at considerably less. The members decided that each dealer in the various towns and villages in the Niagara Peninsula should inaugurate a campaign of effective advertising in his district, pointing out that each was prepared to meet mail order competition and give better values and at as low prices as those quoted by the catalogue houses. A series of advertisements will be drawn up by Messrs. Lambert and Rice and sent to each dealer in the Niagara Peninsula, who will use local newspaper space for combating outside competition.

It will be pointed out that not only can better goods and superior service be obtained at home but that prices are uniformly lower and the local lumber retailer is there to guarantee satisfaction and quality in every instance. On mail order material, unless a certain quantity is ordered, it is necessary to pay cash in advance, freight, cartage and other charges, and there is practically no return of the goods in case they are not up to the specification and grade set forth in the catalogue. Many complaints have been made by customers who have tried mail order houses, and a number of those present stated that, while a person may be a mail order customer once in securing building material, his experience is such that he never becomes a patron a second time.

In the general discussion it was pointed out that most of the material shipped by mail order houses had local freight added to it. The goods were often bruised in transit or left out in the cold and wet.

The mail order houses also call for cash. Those who were patronizing these organizations, it was stated, would come around to the local lumber dealer and ask for credit or invite him to supply certain odds and ends on which the mail order firm had fallen down. It was felt in connection with all such business that cash was the proper medium, and the dealers will set forth this phase of the situation as well.

Getting After the U.F.O. Trade

Another matter taken up was the practice of the local secretaries of the United Farmers of Ontario buying shingles and other supplies in carload lots and selling them out to the members of the U.F.O. It was decided that each lumber retailer should become acquainted with the local secretaries of the U.F.O., and, when carloads of material are required, to request an opportunity to supply the same. It was felt that the local lumber dealer should not antagonize the U.F.O., but that the retailer was in a position to supply carloads of material of forest products on equally as favorable terms as outside concerns.

In the matter of credits, it was decided that this information should be centralized as much as possible with the local secretary of the Association, O. W. Rice, of Welland. Mr. Rice will then be in a position to report to the members on the standing of any contractors or others who do not purchase in their home town but seek to get supplies eleswhere. It was pointed out that when a contractor came from Niagara Falls to Welland to buy material or a Cayuga man went up to Dunnville, it would be advisable to make inquiries before supplying such a party. The excuse generally offered by the customer for not purchasing at home was that he could not get service, the stock was not carried in his own town, or some pretext of a similar plausible nature. While such pleas sounded well, it was the experience of most dealers that the applicants were generally men whose financial standing was none too sound, and who has a record of not paying those with whom they had been doing business in the past. It was felt that the credit bureau was one of the principal factors of the service which will be rendered the members.

No Rebates Granted to Contractors

The question of granting contractors a special discount or commission elicited the fact that the dealers in only one town in the Niagara District granted any extra discount and that was 5%. The lumber merchants in all the other places stated that contractors paid the same price as the ordinary consumer, and if they suggested being allowed an extra discount, they were met with the information that they (the contractors) could charge what discount they liked but could not get it from the lumber dealer. There was no objection if contractors added it on to the bill of goods with which they supplied the customer. The members of the Association decided to stand firm in granting no special discounts.

The preparation of plans for houses was discussed, and it was felt that a much larger business could be done if the average lumber dealer was in a position to tell a customer what a four, six or eight-roomed house of a certain size would cost, and was able to give him details of quantities and prices. This would frequently ensure getting the business of farmers and others who might go elsewhere. The advisability of having a number of plans showing elevations and also floor plans, together with details of materials required, etc., was considered, and it was felt that it would be desirable to have such a book prepared with suitable illustrations, etc. Secretary Rice was instructed to write the Ontario Retail Lumber Dealers' Association regarding this matter and see if something could not be done in furnishing such a service at a reasonable cost to members.

Wide Spread in Operating Costs

The question of insurance was discussed and revealed a wide range in rates, some members stating they were getting insurance on their planing mills for as low as $4.50, while others were paying up to $6.40. It was the same in connection with yard stock, the rates ranging from $2.50 to $2.95. The various classes of insurance were discussed, together with the rigid regulations imposed by a number of the companies. No definite action was taken and the interchange of opinion was merely for purposes of instruction.

Still another topic taken up was planing mill costs. It appears that more and more plants are being operated by electricity, and in the majority of towns the charge is made on a flat-rate basis. Figures presented by different dealers showed that there was quite a difference in the rate per horse power, and some effort may be made at the next meeting to prepare a comparative statement with a view to equalizing charges more than they are at present.

The question of machine costs and the charges made for such work on all jobs coming into the plant was considered. One dealer said that in addition to the material he added $1.30 per hour for each hour put in on the machine work. Another stated that he added $1.40, and still another $1.60.

In connection with the question of overhead, one member stated that his overhead costs were $1.00 an hour, exclusive of manual labor, for each machine in his factory whether or not it was in operation. The overhead charges practically took in everything from oil to insurance. It developed during the discussion that there was a considerable spread in the charges, so far as planing mills are concerned, and no very definite basis of costs. It is hoped, by further discussion, to gain more enlightenment on this subject and arrive at a more equitable and uniform cost basis.

Stratford Lumbermen Hold Annual Meeting

District Rally Largely Attended and Business Conditions Thoroughly Discussed—Members Pleased with Proposed New Mechanics' Lien Act

Geo. S. Zimmerman, Tavistock, Ont.
Newly-elected Chairman.

With an attendance of over 75% of the membership, the annual meeting of District No. 7 or the Strantford Branch of the Ontario Retail Lumber Dealers' Association, was held at the Mansion House, Stratford, on March 22nd. The present conditions of trade, the outlook, building prospects, the trend of prices, a book of building plans, the draughting of the Mechanics' Lien Act, the operation of the Workmen's Compensation Act, and other timely topics were discussed.

While business throughout the Stratford district is rather quiet at the present time, there is every evidence that building will be carried on to a considerable extent in some centres, one member remarking that, at least, thirty dwellings would be put up in his town.

When the election of officers for the year 1921 came up, Robert Oliver of Listowel, who has been chairman for the past two years, was again nominated and many complimentary references were made to the faithful work done by him and Secretary E. K. Kalbfleisch of Stratford. Mr. Oliver warmly thanked the members for the honor but intimated that under no circumstances would he again consent to occupy the chair. Being presiding officer of the Stratford District had been very pleasant, and some excellent meetings had been held, with the result that the general status of the members had been raised. They not only knew one another intimately, but aggressive action had been taken on a number of important matters. Mr. Oliver believed that the honors in any Association should go round and that some new blood should be injected in the executive. He would gladly continue to do anything that he could for the Stratford District lumbermen.

New Officers for Coming Year

Nominations were then proceeded with and the following will administer the affairs of Branch No. 7 during 1921:

Chairman, George S. Zimmerman, Tavistock.

Vice-Chairman, J. J. Cluff, Seaforth.

Secretary-treasurer, E. K. Kalbfleisch, Stratford, re-elected.

Executive Committee.

D. C. Baird, St. Mary's; Robert Oliver, Listowel; J. Boshart, Milverton; E. Fleischauer, Stratford; and Wm. Eizermann, Mitchell.

Mr. Zimmerman, who has been an enthusiastic member of the branch ever since it was launched two years ago, thanked the members for the confidence reposed in him and hoped the coming year would be a successful and harmonious one, and that the meetings would be as well attended in the future as in the past.

The retiring chairman, Mr. Oliver, extended an invitation to the members to hold a session in Listowel during the coming summer when the Old Boys' Reunion will be in progress in that town.

The first matter discussed was the new Mechanics' Lien Act, and much interest is being taken in this measure. All the members have written the M.P.P.'s for their districts, urging them to support the bill, now before the Ontario Legislature, with the result that many encouraging replies have been received. Various experiences were related of how members had lost money in the past or had their claims repudiated owing to the old act affording them little or no protection.

Other Features of the Bill

Some features of the new act were gone into and favorably commented upon. Among these were: The new Act makes the owner responsible for all accounts due for labor and material. Contractors must furnish affidavits showing amounts earned. The owner will then pay laborers and material men direct. The contractors will not be given money to pay laborers and material men. This will prevent dishonest contractors from using the money on another building and giving a note to the material man.

If a contract is entered into for a price, which the owner knows, or should know, is too low, he will be liable, under the Act for the amount which the building should reasonably have cost.

The owner will not be allowed to set off, against the material men, damages for non-completion of the work due to negligence on the part of the main contractor.

Liens, whether registered or not, will attach from the moment the material is supplied. No question can arise as to the prior registration of mortgages.

As having a genuine prior mortgage, the land will be deemed to have been improved to the extent of the work done and the materials supplied for the building erected upon it.

Passing the Charge on to the Next

Several members gave their experiences under the present Act which were particularly interesting. One visitor stated that a contractor in his town had gone to a lady and intimated that he could fix up the verandah on her house for about $60.00. She told the man to go ahead with the work, and he then went to a retail lumberman and ordered up certain material which amounted to over $200.00. When the woman got the bill, she was astonished at the sum and accused the contractor of making false representations to her. The contractor laid it upon a local retail lumberman, declared that his prices had been exorbitant and that it was the lumber merchant who was really responsible for the high cost. This the lumberman naturally repudiated and invited the lady to get quotations from a dealer in any of the adjoining towns. She did so and found that the figures charged for supplies were higher than she had paid in her own town. The woman then settled her account without further trouble, but needless to say she will not likely have anything further to do with that contractor who was seeking to make of himself a good fellow at the expense of others, and when the pinch came, tried to pass the buck on the retail lumberman.

Another member stated that it seemed to be the prevailing spirit of the age to charge every other trade (except the one in which we ourselves are engaged) with making extortionate profits or seeking to get rich quick at exalted prices. Continuing, he said, "The general store man will charge the coal dealer and the lumberman, the farmer and everybody else with asking too much for their products, maintaining that they should come down in price and reduce their lines to a reasonable basis; yet the self-same storeman will say nothing about a fur which he is selling for $125.00 this season and was getting only $80.00 for it last year.

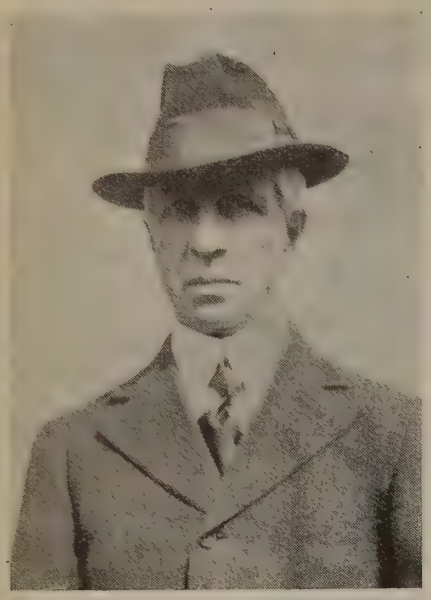
Another matter, which came up, was mail order competition, and it appears the dealers in the Stratford District are not apprehensive of competition from catalogue houses, who have not been as aggressive in that section as in others.

Plan Book Proposition Endorsed

The proposition of having plan books for the members was favorably commented upon, and on motion of Messrs. Cluff and Oliver, it was decided that Secretary Kalbfleisch should write the Ontario Retail Lumber Dealers' Association, asking if some steps could not be taken to prepare plan books for dwelling houses, showing elevations and floor plans, together with details of materials, quantities required, etc., and to ascertain what the cost of such a service would be. It was thought that this would stimulate building in a number of the surrounding towns and would be an invaluable asset to service rendered by the retail lumberman.

G. B. Van Blaricom of the "Canada Lumberman" was requested to address the gathering, and gave an outline of what other district branches were doing, the subjects they were considering and the satisfactory progress that had been made. He referred particularly to the activities of the newly-formed Niagara Peninsula District Association.

The question of the retail lumberman doing more advertising in the local papers, the desirability of getting rid of his high-priced stock at as early a period as possible and replenishing with materials at the present figure, the importations of southern pine, the present prices of hemlock, the possibility of a reduction in freight rates on B. C. forest products, the new standard order form of the O.R.L.D.A., the attitude which members of the Association should assume toward irresponsible parties who are seeking to upset the recognized standards of business, and slash everything in sight, and other allied topics were referred to. During the meeting a general interchange of thought



J. J. Cluff, Seaforth, Ont.
Vice-chairman of Stratford District.

E. K. Kalbfleisch, Stratford, Ont.
Secretary-treasurer of Stratford District.

D. C. Baird, St. Mary's, Ont.
Member of the Executive.

Robert Oliver, Listowel, Ont.
Member of the Executive.

and opinion took place in what proved to be one of the brightest, most lively and enthusiastic gatherings which the Stratford Branch has ever held.

The Trend of Prices Discussed

There was a general discussion on retail prices throughout the district on hemlock, shingles and other lines, and it was discovered that the majority of the members had little to complain of in regard to the profits they were making, providing they were taking into consideration the present cost of doing business, replacement values and general unsettled industrial and building situation. There was considerable difference of opinion expressed as to whether lumber quotations would go higher or lower. Several members believed that the bottom had not yet been touched, particularly on shingles, while others affirmed that as soon as a demand set in for building material, owing to the decimated cut this winter and the high cost of production, there would be an ascension in quotations. In the meantime, the majority of the representatives present stated they were not doing much buying but were waiting for trade to open up a little more freely.

Among those present were: Robert Oliver, Listowel; R. C. Bamford, Listowel; D. Floody, Blyth; J. Boshart, Milverton; F. A. Ronnenberg, Monkton; G. S. Zimmerman, Tavistock; J. J. Cluff, Seaforth; E. Fleischauer, Stratford; Wm. Eizermann, Mitchell; E. K. Kalbfleisch, Stratford; Neil Wettlaufer, Tavistock; T. A. Pounder, Stratford; D. C. Baird, St. Mary's; E. A. Kalbfleisch, Tavistock; E. J. Erb, Brunner, and G. B. Van Blaricom, "Canada Lumberman," Toronto.

"Hardwood Flooring Weeks" Arouse Much Interest

Hardwood flooring weeks are now becoming quite popular in Ontario. Under the direction of the Seaman-Kent Co., Ltd., of Toronto, in co-operation with local lumber dealers and hardware merchants, demonstrations have been put on recently in Hamilton, Brantford and Chatham. Among the other centres where "hardwood flooring weeks" will be observed in the near future are Sarnia, London and Peterborough. In each city a full-page ad. in a daily paper is taken by all the interests concerned, and suitable premises are engaged by the lumber dealers for display purposes. Much advertising matter in the shape of panels, cut-outs and other attractive designs decorate the walls and windows, while the Seaman-Kent Co. provide an expert to give estimates and advice to all inquirers.

In Brantford recently the display premises were crowded with men and women interested in hardwood floors. The hardware dealers put on specially dressed windows, featuring brushes, mops, oils, varnishes, waxes, finishes and other allied lines. Several hundred inquiries were made, and as a result of the recent successful demonstration in the Telephone city the retail lumber merchants there have hundreds of names of prospective customers on their list.

The interest of scores in hardwood flooring has been aroused and the publicity propaganda shows what well-directed effort can do in the line of stimulating business and making people desire more cosy, comfortable and artistic homes and home fittings.

Gordon G. Scott has completed his new mill at Upper Cross Creek, N. B., and started operations. Mr. Scott is not manufacturing any long lumber. The mill is equipped with three up-to-date machines for rossing of pulpwood.

Newsy Happenings from the East

Mild weather recently has raised havoc with the snow in the New Brunswick woods and it may cause small operators heavy loss, who have not as yet finished hauling their logs to the streams. Numerous concerns in York and Sunbury counties got away to a late start and another week is needed for some to complete the season's operations.

* * *

A mill camp, owned by Gilbert Stockford at Burton, a few miles below Upper Gagetown, was entirely destroyed by fire recently. A large quantity of blankets, bedding, supplies and extra clothing of the men employed at the camp, together with their money savings, went up in smoke.

* * *

It is rumored that the Frasers' Limited, on the Miramichi are to ask their men to work a ten-hour day with a twenty per cent. cut in wages. Union men say that they will not work ten hours and will not stand for the wage cut.

* * *

J. W. Brankley, manager of the Miramichi Lumber Company, was in St. John recently. When asked how the mild winter had effected the lumber industry, he said, the season had been the best one on record for hauling so far as his company was concerned, but estimated that the lack of snow will effect driving operations.

* * *

The overstocking of the world's lumber market and the fall in prices last year caused a general curtailment in logging, but a very respectable total will be made up for the province of New Brunswick in general and the Miramichi in particular both from Crown lands and private holdings.

* * *

Notice given by the Sayre and Holly Lumber Company to its sawmill employees in Chipman that the mill would operate on a ten-hour day basis resulted in a strike. 100 men went out. The mill had been on a nine-hour day. There has been no reduction slated for wages.

* * *

G. H. Prince, Provincial Forester, is in Newcastle on the North Shore, on an inspection trip to the survey party engaged in cruising Crown lands on the Northwest Miramichi. He will also inspect the work of two survey parties working some twenty-five miles further northwest on the watershed of the Mepisiquit River. These parties are engaged surveying the timber limit lines and cruising the Crown lands under license maps and timber estimates and is bearing half the cost of the work. The arrangement is similar to that under which the White Company of Sussex and the Randolph & Baker Company of St. John secured copies of maps and estimates of Crown lands under license to them during the last two years.

* * *

Four lots of Crown lands were offered for sale recently in Fredericton at the office of the Department of Lands and Mines. Two of these in Glouchester County going to the applicants, P. R. Gionet and S. Vinneau, at the upset price of $2 an acre. A lot of 270 acres at the head of the East Branch of the Canaan River in Westmoreland County, went to A. C. Chapman, at the upset price of $2. A lot of 101 acres in York County, south of Benton, went to Guy Murchie, of Canterbury, at $4.35 an acre.

Harwood's Palmy Days as Lumbering Town

Eastern Ontario Hamlet is Now "Deserted Villiage"—Flower of Prosperity Nipped by March of Events—Rice Lake Shores Once Teemed with Sawmills

By F. H. Dobbin, Peterboro, Ont.

Scattered over the eastern part of the province of Ontario, and to the height of land that gives towards the Ottawa, are found places and locations that were once upon a time thriving centres of life and activity. Such owed their inception and most of their progress to the availability of the limits from which to cull and cut the lumber that made up the export from the vicinity. The forests being gradually denuded, the mills were closed down and often dismantled and the population dwindled away, leaving only a few who could not go less they abandoned all they had on earth. Few businesses are so impermanent as a lumber mill, for from the very nature of its trade it consumes itself. Presently starvation and strangulation ensue. There is much of interest about the past of these struggling hamlets and the evidences of better days. The village of Harwood, on Rice Lake, is a case in point.

Harwood has a past. At one time its inhabitants spoke in a hopeful tense of the future. There was even a real estate boom, and promise of inflated values, for the activity warranted it. To-day the village is spoken of in the past tense and those of the present generation living within its borders ponder on what might have been, had the supply of logs and timber held out. If one has read Goldsmith's "Deserted Village" appreciation may be felt about the scramble of houses hoisted up on the shore of Rice Lake on the border of the county of Northumberland.

In its palmy days, Harwood depended on the lumber industry and the fifteen miles of the Cobourg and Peterborough railway, that gave access from the lake front to the village. When a combination of circumstances switched away these props the fate of the thriving community was sealed. Then followed the inevitable demolition. Many of the more pretentious buildings were burned. Others were torn down and the balance fell into disrepair and disuse.

Sawdust Ground and Old Mill Foundation

Perched on top of the hill stands the Lakeview House, the only surviving hotel. Frequented in the good old summer time by the visiting fisherman, and in the off-seasons doing a transient business. Looking out from the verandah of the house is seen the east bay, that once floated hundred of thousands of logs. On the shore the only reminder of the once flourishing lumber industry is the old sawdust ground, where the dust and offal from the big mills were deposited. Piled in deep layers it has outlived the passage of years. Campbell & Houston were the owners of the mill that would turn out 100,000 feet of lumber in a day. All that remains of the structure is the suggestion of a foundation that formed the basis of the engine room and of the big iron smoke-stack that towered over one hundred feet to the sky.

On the rising land behind the mill there was a double row of boarding houses, built to house the employees, and a number of scattered buildings occupied by men who had with them their families. Scarcely a trace can be found of the buildings. Nature dearly loves to heal a scar.

West of the hotel, and towards Gore's Landing, stands another scrawl of low-lying masonry, all that is left of the fine mill owned and operated by McDougall & Ludgate, names long association with the early and later lumber history of the counties. Big drives of logs were floated down the Otonabee River, gathered from the lands adjacent to the lakes and streams tributary, and north of Peterborough. The south end of the somewhat emasculated Cobourg and Peterborough railway carried the lumber to the shore of Lake Ontario for shipment by schooner and barge to the other side of the lake.

Busy Boats Carrying Lumber Cargoes

The village in its best days was the headquarters of a fleet of steamers that proclaimed its prosperity. Of these boats were the "Otonabee" and "Forest City," each as large as any that now plough the waters of the Trent Canal system. Another boat was the "Isaac Butts," named after a vigorous promoter, and the "Golden Eye," built by Harry Calcutt, of Peterborough. He had a penchant for naming his boats after Canadian wild fowl, and others of his fleet were the "Whistlewing" and "Sandpiper." These craft are remembered by many of the older residents of the city and the river shores. The boat routes extended in those days from Peterborough to Healy's Falls. For a number of years, after the breaking down of the Rice Lake bridge of the railway, lumber cut at Peterborough was transported on scows to Harwood and on by rail to Cobourg. The whole activity gave employment to hundreds of men in season.

When their usefulness was over several of the vessels were beached in the bay east of the old mill, and now one moving along the shore may, at low water, see the ribs of the craft sticking up from the bottom, veritable skeletons exposed. Parts of the boats, above water, were appropriated by the natives, and many a barn had its siding repaired from the flotsam and jetsam of the old river craft. Other small craft, owned by thrifty souls did a traffic and passenger business around the lake.

Apart from the general freight and passenger traffic a large quantity of iron ore was carried by boat and scow from a point on the Trent River to Harwood, and by rail to Cobourg, to be taken across the lake to the big smelter at Charlotte, N.Y. The ore, mined from the deep pits at Blairton and Marmora, was of excellent quality and especially so when mixed with the softer ores brought to the Pittsburg smelters, making an iron and steel that had values for the manufactures in such metals. Fuel was not procurable at the mines, except at excessive cost, so the ore was shipped in bulk, after careful selection.

Railway Built on Wooden Piles

Jutting out from the south shore can be seen the remains of what was one of the most pretentious and daring features of railroad building of its day, the bridging of Rice Lake. The distance to be bridged was about two miles. Out in the lake was one of the numerous islands and conveniently placed. A filled-in section was constructed, the material being delved from the hills on the south shore, the whole forming a substantial road bed. For the rest of the distance the crossing was built up on piles. These were affected, indeed maltreated by the forces of a Canadian winter. Ice forming about the piles, lifted by the spring flood, raised the bridge and distorted it cruelly. In the end it had to be abandoned. The old road bed, viewed from a distance, appears like a mammoth hedge set out in the lake, being overgrown with trees and shrubbery.

One could hardly realize that once a station and freight sheds and a commodious dock existed. The station was sold to the Orange Lodge at Roseneath, moved there and put to use, and is still the meeting place of the fraternity. A man named Drope owned nearly all the land around Harwood, and had the first hotel and store. As business grew, a large general store was built and carried on by William and Robert Harstone. But when the beginning of the end was in sight, the Drope hotel caught fire, the general store building, followed, and one does not look long to find the remains of the foundations of these structures.

Sawmill Frames Went Into Barns

It is fifty-seven years since the last train crossed the lake; twenty-five since the last train ran to Cobourg; twenty-one years since the disappearance of the visible belongings of the sawmill industry. The Campbell mill was sold to a man named Elliott, of Peterborough, and taken away. It is said that the frame of the mill went into the large barns, conspicuous at what is known as "Halls," just above the first bridge out of Peterborough, (crossing of the Otonabee River). The boilers went to Toronto, and the machinery to Lakefield, to be used in a mill built by the Dickson Company.

The Ludgate & Macdougall mill, west side of Harwood, was sold to the Rathbun Company of Deseronto, and the plant moved to that place.

It may be inferred, as was the case, that in the palmy days Harwood had quite a population. There were section men and train men, and officials of the railway, all the men employed in the lumber mills, and on and about the fleet of river and lake boats, and also a considerable transient population.

There stood in and about the village, Methodist, Anglican and Roman Catholic churches, built in the order named. There was the Presbyterian church at Bethesda, not far from Harwood, so the spiritual wants and needs of the villagers were well and faithfully served. But the old order changeth. Harwood's bloom was nipped when in flower by the inexorable march of events and the exigencies of an industry, that had to get much closer to the base of supply and to develop its own means of communication in the future. It is quite probable that nearly a million dollars were expended in the village and neighborhood. But now, all is as Ninevah and Tyre.

Eastern Inspector Doing Good Work

Mr. Redfern Visits Many Camps in New Brunswick— Gives First Aid Lectures to Lumberjacks

Jack Redfern, Inspector of the Workmen's Compensation Board of New Brunswick, with headquarters in St. John, N.B., recently returned from a trip to lumber camps from Campbellton to Kedgwick, covering an area of 375 miles. In conversation with a correspondent of the "Canada Lumberman," he said he found conditions in the majority of cases good, but very little was known about the act, and practically nothing about first aid. Mr. Redfern is one of the most proficient first aid instructors in these parts and his years of work in hospitals all over the Empire is proving invaluable in his present duties. He not only imparts knowledge about the act, but gives them lectures and practical demonstrations on first aid. He distributes first aid books, printed in English and French, which should be worth their weight in gold for these men isolated in the wilds of the New Brunswick forests many miles from any towns or villages.

Mr. Redfern said he had come in contact with many pitiful sights, while making his inspections and narrates one story of a man sustaining a deep cut in the leg from an axe. This unfortunate was lying in his bunk with a piece of pork over the cut and upon an examination Mr. Redfern found that the shin bone had become diseased and the cut was in a terrible condition and from all indications a tubercular germ had set in. He had the man removed from the camp and he is now undergoing treatment, which may necessitate amputation of his leg. The inspector told of coming into a camp and finding a member with a double dislocation, which was causing the victim unfortunate excruciating pain.

That the work of Inspector Redfern is being thoroughly appreciated is evident from the fact that he has been termed by some "An Angel of Mercy." He left on February 17 for Kedgwick and will cover an area through to St. Leonards. En route to the various camps he has many experiences. Recently while crossing one of the rivers to reach a camp he went through the ice and had a most trying time reaching terra firma, due to the weight of the pack he was carrying on his back. He was also handicapped by his snow shoes and heavy wearing apparel. Mr. Redfern was formerly a swimming instructor and, being of exceptionally strong physique, he was able to keep afloat while he broke away the thin ice and encountered some strong enough to bear his weight.

Those who are familiar with conditions in lumber camps and are personally acquainted with Inspector Redfern maintain that the Compensation Board would search a long time before they would be able to get a man more reliable and proficient in his duties. They are unanimous in a statement that his work will prove invaluable not only to the men, but to the operators.

Too Many Cars to Get What One Requires?

Editor, Canada Lumberman.—

At the lumbermen's banquet recently in Toronto, I was a good listener, and being a member of the association I was struck with a question put by the president of the Toronto Wholesalers' Association, asking what the Ontario Retailers' Association was formed for? He spoke in a tone which seemed to convey that possibly we had no right to a place on the earth. I would like to have informed him of the reasons for our birth, but not being a speaker and feeling that it was not the proper place to do so, I take this opportunity of speaking up.

If a wholesaler is a real wholesaler, he has the power to instruct the manufacturer, what to saw his material into for consumption in the markets in which he intends to sell it. What has he been doing for the last 30 years? Letting the manufacturer saw and pile it to suit himself, irrespective of the wants of the consumer. The wholesaler then has to unload it on the retailer who spends most of his time trying to sell to the consumer something that the latter does not want and cannot use, without a great deal of waste, and forcing the retailer to take, in some cases, nine or ten cars for the sake of getting one which he actually requires to fill his orders.

For example, if a consumer has a house to build and wants, say, 300 pieces 2 in. by 4 in. by 10 ft. and 400 pieces 16 ft. lengths, in order to get them the retailer has to buy from the wholesaler five or six cars piled 10/16 ft. before he can fill his order, thus forcing him to carry all this unsaleable stuff, paying insurance and interest on the same, and tying up his small capital, so that he is unable to extend his business to any extent. If the retailer could get what he wanted when he wanted it, I contend that he could turn over ten times as much business.

Some wholesalers ask why the retailers go across the line and buy their lumber. I might state here, that the retail dealers are as patriotic as any other body of men and prefer buying at home, but for a dealer who wants to do a decent sized business, he has to go to the trade south of the border, where they have emerged from the rut that many of our people have fallen into, and put their lumber up so that one can get a full car of any one size or dimension desired, and does not have to take cars of stuff that is not needed. I feel that the sooner the wholesalers of the Dominion wake up to the facts that I have stated the better. We are anxious to see the rate of exchange reduced, and if the wholesalers will sit up and do a little thinking, instead of worrying about what the Ontario Retail Association is doing, they will achieve more themselves and also do a lot of good to the retail trade and the consuming public.

Yours, etc.,

CO-OPERATION.

Some Logs in This Great Load

Here is a pile of logs that, to the casual observer, is apparently too large for any team of horses to haul, yet it is not an unusual load, there being 121 logs on the sleigh They were cut from Mr. Van Horne's operations on the Northwest Upsalquitch River in Restigouche county near Cambellton, N.B. Mr. Van Horne has been lumbering in that section for several years, and makes splendid roads by means of his improved snowplough, so that he can haul very heavy loads over it. When the photograph was taken, the logs were being moved from the yard to the landing on the river.

Team pulling 121 logs on a sleigh.

Boiler Settings Are Most Important

The importance of boiler settings in connection with the lumber and other trades has called into being specialists who have made a study of this work. John W. Gates, president of the Gates Engineering Company, 314 Notre Dame Street West, Montreal, has had a large experience in this line. The boiler settings of the company are made of a special grade clay, which is stronger, more durable, and possesses higher heat-resisting properties than ordinary fire brick, will not fuse until 3200 deg. F. is reached, and has a crushing strength of 2,000 pounds per square inch.

The arch blocks kept in stock are for Dutch ovens, ignition arches, stoker arches, etc. It is claimed that the company's linings are made of a highly refractory material, strongly immune to the destructive influences of sudden thermal changes, and will withstand much compression under high temperatures—three important qualities.

The vice-president is Samuel Mann, who has had a long experience in contracting work. He has charge of the construction department of the company.

Looks for Good Rural Trade in Fall

Speaking of trade condtions recently, O. W. Rice, of the O. W. Rice Co., Welland, Ont., stated that they had had a good many inquiries during the past two weeks and had quoted on quite a few bills of lumber for new houses which will be erected in that city. As yet there seemed to be a tendency on the part of the builders to hold back in expectation of a still further reduction in price. Mr. Rice stated that personally he was well satisfied with conditions, and business as compared with last year was better so far. He does not figure very strongly on farm trade for the early part of 1921, but thinks that if the rural residents have a fair crop, that retail lumbermen may look for a more extensive building programme this fall in the country than was carried out last year.

Architectural Department Brings Business

How Progressive Western Ontario Retail Lumber Concern Has Built Up Strong and Active Connection With Rural Community—Quick and Complete Service

A. J. McKinney, Woodstock, Ont.

"We find a great boom to our business is our architectural department. We make our own designs and believe we get a lot of business by this means that otherwise would slip away from us," said A. J. McKinney, of the McKinney Lumber Co., Limited, Woodstock, Ont., recently. As an instance of what such a service and department gain, Mr. McKinney says that he met a farmer on the street a few days ago, who asked him what it would cost to build a cottage 26'x30', four rooms—two bedrooms, a dining room and a kitchen. Mr. McKinney inquired when he would be going home and received the reply "about 4 o'clock in the afternoon." The retail lumber dealer told him to call at the office before his departure. When the farmer drove up, Mr. McKinney says they had ready for him a neat little design with floor plan, elevations and complete specifications. The rural visitor was so surprised and delighted that the McKinney Lumber Co. got his business at once.

Another interesting illustration is furnished by the McKinney Lumber Co., who state that about a year ago a farmer was burned out at six o'clock in the morning. He drove into Woodstock and called at the lumber company's office early in the afternoon. A member of the firm went out that evening, and took the measurement of his foundation, which was not destroyed. The next afternoon the farmer, his wife and family and a friend who had just built a new house, came into town. "We took them," continued Mr. McKinney, "into our draughting room and with their help designed their new home, got their business the same afternoon and the next day the farmer was drawing material away for his new home. We find that this architectural department works well, not only with farmers but with school boards, church boards and, in fact, anyone who is building."

Mr. McKinney, who was lately elected a director of the Ontario Retail Lumber Dealers' Association for the Western District, has become a booster of that organization. The recent gathering in Toronto was the first one that he attended and he was thoroughly delighted with the proceedings.

Mr. McKinney, whose yards and mill are located at the corner of Ingersoll Ave. & Riddell St., Woodstock, has had a long and practical experience with the lumber and construction line. His father was a framer and bridge builder. The subject of this reference went into the bush when 12 years old. Two year later, being left alone and the oldest of a family of four, he had to get his back to the wall and put up a hard fight. Arriving in Woodstock 22 years ago he worked as a carpenter and foreman for a local contractor until 1910, when he launched out in the contracting business on his own behalf. He experienced considerable difficulty in getting supplies and decided to build a small shop and install a few machines so as to be able to make his own frames, etc. This proved to be a great advantage and he soon found that it was necessary to enlarge not only his shop but his lumber yard as well.

In 1912, finding more capital necessary for the extension of his business, he took in a partner and organized The McKinney Lumber Co., Limited. The partnership lasted for one year when, by mutual consent, he bought out his partner's interest, still leaving the concern as a joint stock company. Business has kept increasing, and more enlargements were made to the plant until the last Sunday morning of 1919 the entire planing mill and contents were destroyed by fire. Mr. McKinney and his associates had faith in the future of the business and turned their whole force the next morning to reconstruction. In two weeks' time they were able to move into the new planing mill building on the old site. This is a two-storey structure 60'x112', fully equipped with a closed lumber shed also two storeys high, 50' x 80'. At present the company is building an addition 50' x 60' to their shed and a new office and storage building 50' x 26'.

The McKinney Lumber Co. has developed from a small beginning into a go-ahead, fair-sized industry and while it does a large retail lumber business, it has found that the contracting end is an active element. "In fact," declared Mr. McKinney in conclusion, "it is the life of our business. To it there is no limit, and if one is alive at all times, there is no need to be idle."

Will Develop Russian Timber Areas

General MacDougall, formerly of the Canadian Forestry Corps, and now head of the Timber Operators and Contractors' Syndicate, London, England, said recently that he has negotiated for large timber areas in Russia, which he hopes to develop in the near future, now that a trade treaty has been effected with the Soviet Government.

General MacDougall's firm has for some time been carrying on extensive lumbering operations in the Baltic Provinces, chiefly to supply ties to the British railways. In this work his firm has been employing about 1,800 men, including a number of ex-members of the Canadian Forestry Corps as superintendents. Some forty million feet of red pine have already been cut. General MacDougall, who visited the district in February, says the country thereabouts is in a forward state of agricultural development and offers a market for agricultural implements and manufactured articles generally.

Expect Reduction in Long Haul Rates

Writing to the "Canada Lumberman" on the prospects for the coming year, A. K. Leitch, of the East Kootenay Lumber Co., Limited, Jaffray, B.C., says:—The market outlook for the Mountain mills is unsettled at present. Prairie farm building is very quiet and improvement unlikely until the middle of June or the first of July when out-turn of crops can be estimated. A great deal of prairie city building is necessary and will be carried on just as soon as other building material prices, and building labor, is reduced as lumber has been. Shipments to Eastern Canada and United States points are small owing to higher freight rates and competition from Southern Pine Mills. Western lumber manufacturers are expecting favorable consideration from railway companies for a reduction in long haul rates and, should a substantial reduction be granted, it will greatly stimulate shipments, especially to Eastern Canada. Logging operations this winter have been about 60% of normal.

Credit Analysis for Busy Men

Buyers were suspicious of the trade acceptance when its use was at first advocated, some referring to it as a new collection scheme. One merchant, when requested to close his account by trade acceptance, stated he would not think of committing himself to pay bills at a definite time, for he might not have the money when the day arrived. After considerable persuasion on the part of the seller, he finally did agree to close his account monthly by trade acceptance and after using the plan for a year wrote to the seller as follows:

"The trade acceptance has proved its advantages over the open-account system in many ways and it has especially helped me in connection with my collections. In other words, it gives a fellow the nerve to ask for money due him, for he must meet the trade acceptance on the day of maturity and thus he is unable to allow his accounts receivable to drift along. I am also starting to use the trade acceptance in my own sales, so I am receiving the benefits which accrue to both seller and buyer."

One of the principal points in connection with the trade acceptance is that it guards the buyer against overbuying, for he realizes that his purchases must be paid on a definite date. The trade acceptance prompts the buyer to be careful to whom he sells on a credit basis, for if he assumes undesirable risks he will have difficulty in collecting his money.

Furthermore, he is spurred on to greater sales effort as he identifies any large quantity of goods remaining unsold with the trade acceptance covering the bill and when the obligation falls due he usually gives this portion of stock special attention and very often is successful in moving it.

Conditions Returning to Normal in Britain

J. A. McFadgen of Stratford, Returns After Two Months' Trip Abroad with Canadian Curlers—Noticeable Structural Stride in the Larger Cities

J. A. McFadgen, Stratford, Ont.

The Canadian Curlers returned home recently from their tour of Scotland and had a splendid outing. Among the most enthusiastic members of the party was J. A. McFadgen, president of the Manufacturers' Lumber Co., Limited, Stratford, Ont. He has long been an ardent devotee of the stane and besom. "Our time," said Mr. McFadgen, "was so fully taken up with the schedule of games and with the multudinous entertainments provided for us by the thoughfulness of the Old Country people, that I had little or no chance to think of business or business affairs except incidentally. In a general way, however, I gathered that conditions are returning to normal very rapidly. There is a considerable amount of labor unrest, particularly in the mining district, but I believe the good sense of the British people will be competent to handle this situation satisfactorily. Most of the cities are engaged in building programmes of one sort of another, and there is quite a noticeable structural stride in such places as Glasgow, Manchester, Birmingham and other essentially busy centres.

Touching upon the reception accorded them and the number of battles on the ice, in which the Canadian curlers engaged, Mr. McFadgen said:—

"We had a most wonderful trip and were received with the utmost courtesy by the people of Scotland. The outstanding feature in the minds of all of us who were on the team, is undoubtedly the wonderful hospitality that was extended to us on every hand. We were the formal guests of the Royal Caledonian Curling Club, but it appeared that every curler in Scotland and hundreds of people that were not directly interested in curling at all, considered it their bounden duty to entertain us and they certainly succeeded in doing so.

"We curled entirely on artificial ice in the Old Country, weather conditions being such that it was impossible to curl outdoors. There are at the present time only two artificial ice rinks in the United Kingdom, one at Edinburgh and the other at Manchester. We were three weeks at Birmingham and one at Manchester. Ice conditions were ideal, being entirely under the control of the ice makers. We curled in all thirty-four official games and won 29 of these. Included in these were five test matches, two of which we won, losing three. In a general way, when we had as opponents men who were members of the two ice rinks above mentioned, we had close hard games. On the other hand, when we met players from districts distant from Edinburgh and Manchester, we usually had easy wins, as these men were seriously out of practice. But losing or winning, the Old Country curlers are gentlemen sportsmen and every game we played was highly enjoyable to all of us.

"Personally I curled thirty-nine or forty games, having worked in several friendly matches not on the official schedule. The large majority of these games I skipped, occasionally playing vice, and was fortunate to win a heavy percentage of the games in which I was engaged.

"Among the entertainment features provided for the team, were a two day automobile jaunt from Edinburgh to Glasgow through the Trossachs, stopping over night at Tarbot on Loch Lomond. This trip was provided through the courtesy of Sir Peter J. Mackie. Following the Trossachs trip we were privileged to visit Blair Atholl Castle, on the kind invitation of the Duke of Atholl. On arriving at London we were entertained to dinner by Lord Beaverbrook. The speakers on this ocasion were Lord Birkenhead, Chancellor of the Realm, Hon. Mr. A. Bonar Law, Leader of the House of Commons, and Lord Amery, Under Secretary for the Colonies. Following this we were given a week's trip through the battlefields of France and Belgium, conducted by Lieut.-Col. Comptyn and Capt. Cheyn, both Canadian soldiers now in France in connection with the Graves Registration Unit. We were afforded every facility to see the destruction of the war and the effort being made by the people of France and Belgium towards repairing the devastation. The energy and enthusiasm of these people is almost unbelievable. We were also privileged to see the work of the Graves Registration Unit, in the way of constructing and beautifying the numerous Canadian cemeteries in France and Belgium. The people of the Dominion have every reason to be proud of the work being done by these men."

Using Right Wood in Proper Place

The question of direct and efficient service is not only interesting to the retail and wholesale lumberman but the manufacturers are extending their ideas along this course, so that the consumer of their products may receive some timely and immediate benefit.

In this connection a large Western firm announces that it is prepared to help the man who wants to build in many practical ways. It does not matter whether the structure is a house or a barn, a corn crib, a verandah, a garage or a stable. This concern believes that the user of lumber for repairs, replacements or expansion should know all about the product and what kind of wood is best adapted for specific purposes. It also states that whether the sale is for a couple of boards, a truck-load of dimension stock or a million feet, the service is equally available. An outline of the service should prove edifying to readers of the "Canadian Lumberman," as showing what is being done by progressive organizations to stimulate trade, strengthen connection and build up an active, enduring demand for forest products.

Here is the summary:

This service means nothing less than expert advice in using the right wood in its proper place—based on detailed scientific knowledge of the various species of wood, their strengths, their fitness, and their individual action under specific conditions of use.

It may be a new thought to you, for instance, that in building a house lumber must be selected for three totally different functions.

There is the framework—which requires strength above all else.

There is the outside finish—demanding durability under exposure to the weather.

And the inside trim—where the need is for a wood properly seasoned ond prepared, that will "stay put," and that will be attractive when stained, or will take and hold paint or enamel.

For each of these functions certain woods are especially adapted.

For some, cheaper woods will give as good service as more expensive species. In other instances, cheaper woods can be used only at a sacrifice of durability and ultimate economy.

The same principle—the right wood in its proper place—applies to farm buildings, industrial buildings, and all industrial uses of lumber.

The proper use of lumber was never more important than it is at this moment.

To the individual citizen, it means durable and economical building.

To the nation at large it means still more—a great step toward an ample supply of lumber, present and future—the elimination of waste in the thoughtless use of lumber.

What we advocate is conservatism and economy through the use of the right wood in its proper place.

To this end we will supply to lumber dealers and to the public, any desired information as to the qualities of the different species and the best wood for a given purpose.

This service will be as broad and impartial as we know how to make it. We are not partisans of any particular species of wood. We advise the best lumber for the purpose, whether we handle it or not.

Many New Economic Features in Busy Sawmill

How McLachlin Bros., of Arnprior, Have Increased Quantity of Marketable Material Obtained from Logs—Electrically Driven Conveyors and Labor-Saving Devices

By "Progress"

A critical analysis of all saw mills in the Dominion of Canada would, I believe, prove that most of the existing mills are in a condition to be either scrapped or redesigned to meet the new conditions. In comparison with the practises of the European and the Scandinavian, the Canadian has little to be proud of, and the only point on which he excels is that of output; this being secured at the expense of economy and good manufacture.

It was decided in 1919 that the plant of McLachlin Brothers, Limited, Arnprior, Ont., which had been in operation for some fifty years, required to be rebuilt. In common with most old plants, the output was quite satisfactory, but the amount of labour required to operate to capacity was too high and it was found that the quantity of marketable material secured from the round logs could be increased. It was, therefore, decided by Mr. Dan McLachlin, who by the way is President of the Canadian Lumbermen's Association, not only to repair the existing plant and buildings, but to enlarge and modernize the whole plant and bring about a better economic condition throughout; at the same time decreasing the amount of labour required to manufacture the same, or a slightly increased quantity of marketable material.

The power plant had been rebuilt before the war. new boilers and Dutch ovens erected in a modern fireproof brick and steel boiler house and a 48"x60" Corliss engine installed to drive the mill. We therefore started with the power plant of the No. 3 mill in first class condition and capable of further extension. A 500 h.p. 3 phase a.c. generator, driven by a cross compound Corliss engine, was added in an annex to the main engine room, this outfit supplying all the electric energy required for the different motors throughout the plant.

Combination Mechanical and Electrical Drives

It was decided by Mr. McLachlin to use a combination of mechanical and electrical drives; that is, shafting to be used wherever it was best suited, and individual motors wherever advisable. In laying down the design of the new plant, the principal question to be dealt with was the geography of the location. No. 3 and No. 4 mills are located on rocky points extending into good water, the whole forming two ideal mill sites. The problem was to connect these with the yard which is situated on a rolling sandy plateau draining in several directions, fitted with some twenty miles of track, and making an ideal piling ground.

The previous arrangement was to manufacture the lumber at the mills, pile it into bundles and draw it to the sorting table by horses where the lumber was sorted down into the different grades and taken to the yard for piling. The yard being at fifty feet higher elevation than the mills, brought into being a decided grade between mills proper and the piling ground. As it would have been expensive to extend the track system and take standard gauge cars to the mills on the lower level, it was decided to build two electrically driven conveyors. No data could be found covering the carrying of manufactured lumber this distance. A combination roller-chain-electric motor unit was developed which has proved peculiarly satisfactory in service. No failure or interruption of any kind was experienced with this transmisison scheme during the summer of 1920; the cost of maintenance being practically nil. It is felt that there would be no difficulty in extending this system of lumber conveyors for any reasonable distance, as this would only entail a multiplication of the present developed unit. The delivery of lumber from the trimmers to the electric transfer was entirely automatic, as was also the delivery of lumber to the sorting tables.

View of No. 3 mill of McLachlin Bros., Arnprior, looking down the lumber conveyor from the sorting table. The seven cabins house the electric motors that drive the conveyor. Each motor drives 29 rolls. Lumber moving at the rate of 3½ feet a second, takes nearly five minutes to reach the sorting table.

The sorting table for the No. 3 mill is 391 feet long, divided into four drives, each drive being an electric motor. This table has proved peculiarly successful, being cool, quiet, well lighted and entirely satisfactory in every way. Double track railroad was laid on each side of the sorting tables, and the sorted lumber loaded on to the steel yard lorries in bundles by gravity rollers.

The sorting table for the No. 4 mill is 300 feet long, in three units, electrically driven. Only seven men are required on the No. 4 table for 100,000 feet per nine hours' run. About twenty men are required for the No. 3 table for an output of 250,000 feet per nine hours' run, the extra men on the No. 3 table being necessitated by the large quantity of shorts and resawn material that require handling.

Extensive Slab Transfer System

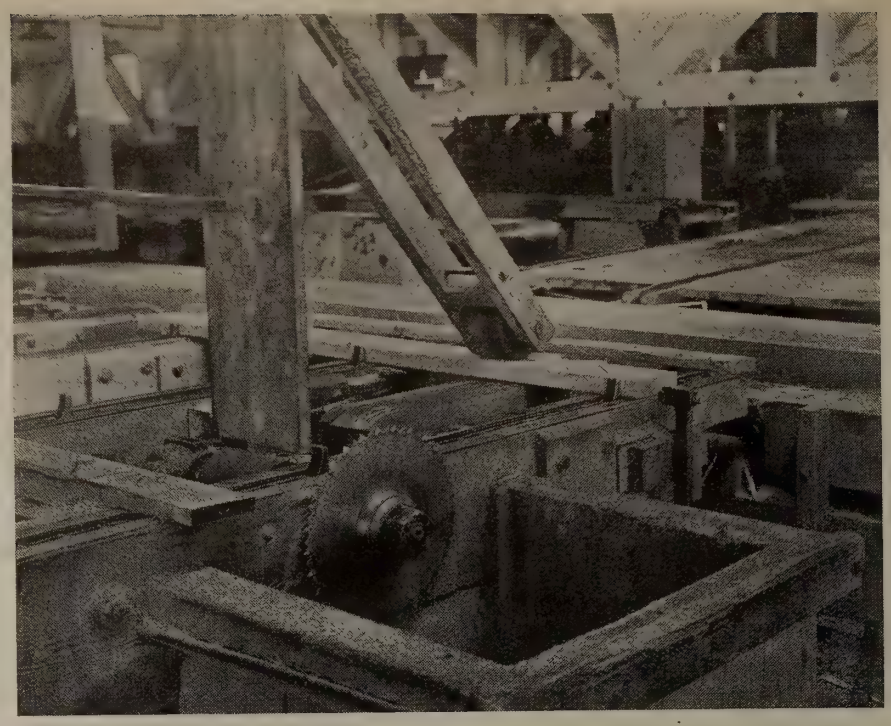
The outstanding feature of the No. 3 mill was the arrangement for the disposal of slabs. It is generally admitted that the trouble maker in most Canadian saw mills is the slab. It was therefore decided to use the whole of the main No. 3 mill floor for the manufacture of lumber and that no slabs of any kind would be handled or re-manufactured on the main mill floor. There was, therefore, built behind the band saws, gangs and twin circulars a rather extensive slab transfer system. Immediately a slab was dropped by any one of the main machines it was carried its own length back of the band or gang and automatically dropped from the roller run to the slab transfer system on the lower floor. The slabs were then carried sideways out of the main mill and into a resaw plant containing a large, specially designed resaw, edger and carrier chains. About eight men, it was found, were sufficient to handle all the slabs coming from 250,000 feet of lumber.

Interior view of No. 3 mill sorting table, which is electrically driven.

The new lath mill, or by-products plant, was located on the opposite side of the main mill from the resaw plant: this with the object of giving us the alternative of sending our slabs direct to the resaw to have a thin board removed before sending them to

the slash saws in the lath mill or, if the price of lath and pickets warranted, allowed slabs to go straight on and automatically drop on the slasher chains. The foreman could therefore, without any change in men and machinery, send his slabs to the picket mill or to the resaw plant by merely issuing the necessary instructions to the operator. An outstanding disagreement in most large saw mills is found between the lath mill foreman and the foreman of the main mill; the lath mill foreman always claiming that he could get a considerably higher percentage of lath, picket, boxing, etc., if his slabs were not frequently cut in the wrong place by the slash saws in the main mill.

It was decided to scrap the five existing slash tables and replace them by one powerful electrically driven slash saw set located in the lath mill under control of the lath mill foreman. All slabs, edgings and mill refuse were therefore delivered to the mill in full length to be cut into any length considered advisable by the lath mill foreman. This one arrangement has justified itself in greater output and increased length of the lath, picket and boxing.



Close up view of the Johnson automatic stamp hammer at work on a 2" plank.

All Sawdust Fuel is Screened

Owing to the trouble usually caused in most mill boiler rooms by sticks, edgings and short slabs fouling the boiler chains, it was decided to screen all saw dust fuel coming from the main mill. A rotary screen 5 feet in diameter by 16 feet long, built of ½ inch boiler plate, perforated with 2½ inch holes, was constructed; all bark, refuse and sweepings of the main mills were sent through it. This produced a decided increase in the available fuel and prevented any further trouble with broken chains in the boiler room. This one installation has more than justified itself and has proved extremely satisfactory in service.

Owing to the large number of 6 and 8 inch logs to be handled, it was concluded that these could be most economically manufactured by specially designed stock gangs. Three of these machines have been built, each driven by its own power plant, and it is felt that the small log situation has been taken care of in a highly satisfactory manner, and that it is much more profitable to manufacture the 6 and 8 inch logs with high speed stock gangs than it would be to waste the time and lower the output of a band mill in handling such small stock.

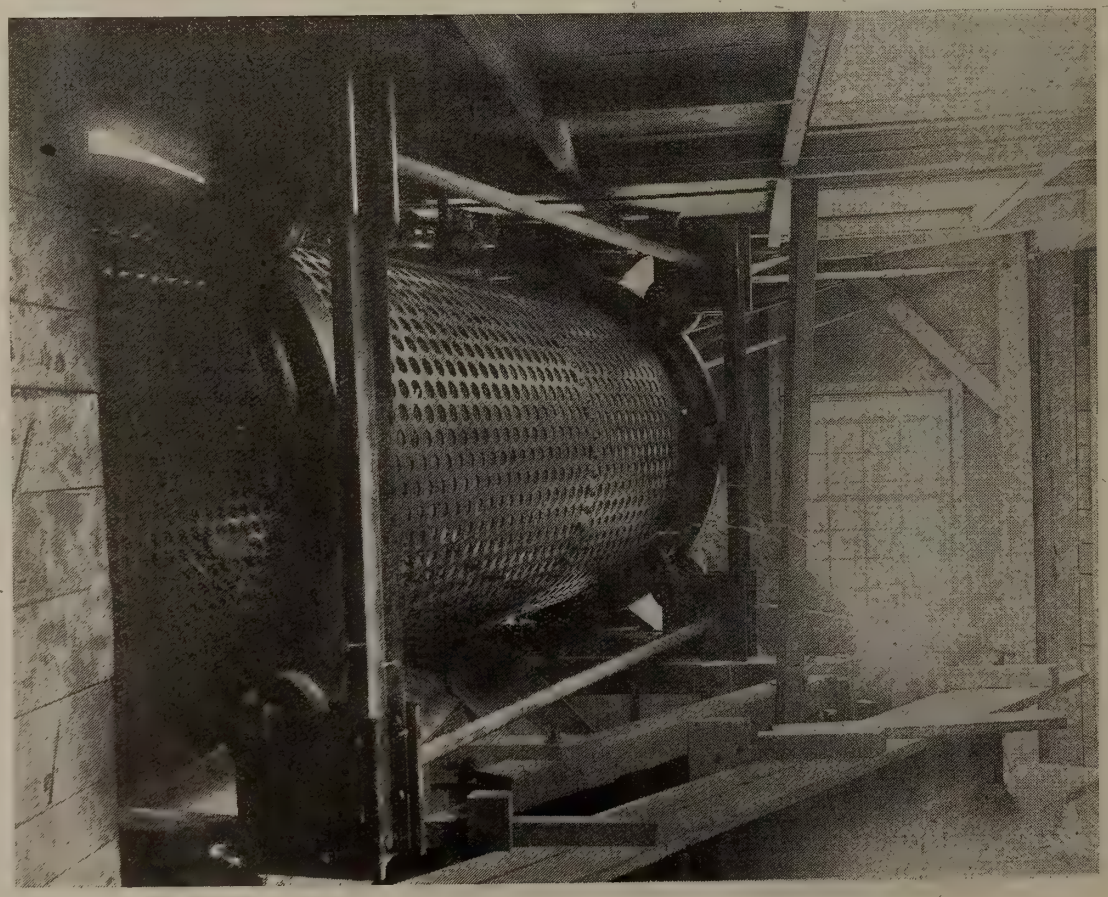
It is realized that there is another school of thought which contends that the proper method of handling small logs is to manufacture them entirely on band and horizontal resaws, but as the gauge of the saws in the present gangs and bands is almost identical, the economy claimed for the small saw kerf of the band no longer applies. The writer believes that a greater quantity of manufactured lumber can be got out of a small log more cheaply with a stock gang than it is possible to obtain with a band and resaw.

The saving affected in securing the same output over the old mill was 135 men and 12 teams. This, I believe, could be much further increased if it had been the case of laying down a new plant rather than the re-design of an old one.

Installation of Vertical Band Resaw

Among the alterations and additions which have recently been made is the Waterous-Johnson vertical band resaw. This is an equipment which has just been put on the market and is a great labor and material saver. The machine is the result of the combined study and experiments of the Waterous Engine Works Co. of Brantford, and Col. George H. Johnson, chief engineer of McLachlin Bros., of Arnprior, and late commander of the Forestry Battalion in the Jura Alps, France. The vertical band resaw will, the makers state, positively cut straight boards from slabs and half logs, regardless of irregularities in the material. It is further contended that the new vertical band resaw combines all the good features of the horizontal band resaw with that of the vertical.

The machine consists of a complete, standard Waterous 8-foot band saw with the base extended in such a way as to carry a feed roll attachment. The feed rolls consist of a stationary, but adjustable, bed of four fluted live rolls. The gears for driving these rolls are located on the top and enclosed in a gear housing. Of the two press rolls, the first one swings on a vertical shaft which presses the slab sufficiently against the fluted rolls to push the slab through the feed works, and next to the saw is the saw tooth roll, which was taken as a complete unit with a Waterous circular resaw. The gears of the press rolls in the vertical band resaw are so made as to automatically take care of all variations in shape and size of slab. The builders claim that all slabs and half logs that require resawing in any mill having an output of 330,000 feet per ten-hour run, will be taken care of by this band resaw which carries a 10" or 12" saw blade and can be fed to the limit of its cutting capacity. Col. George H. Johnson, chief engineer of McLachlin Bros., Limited, of Arnprior, says that the new vertical band resaw is proving entirely satisfactory and is a step in advance of present resaw design.

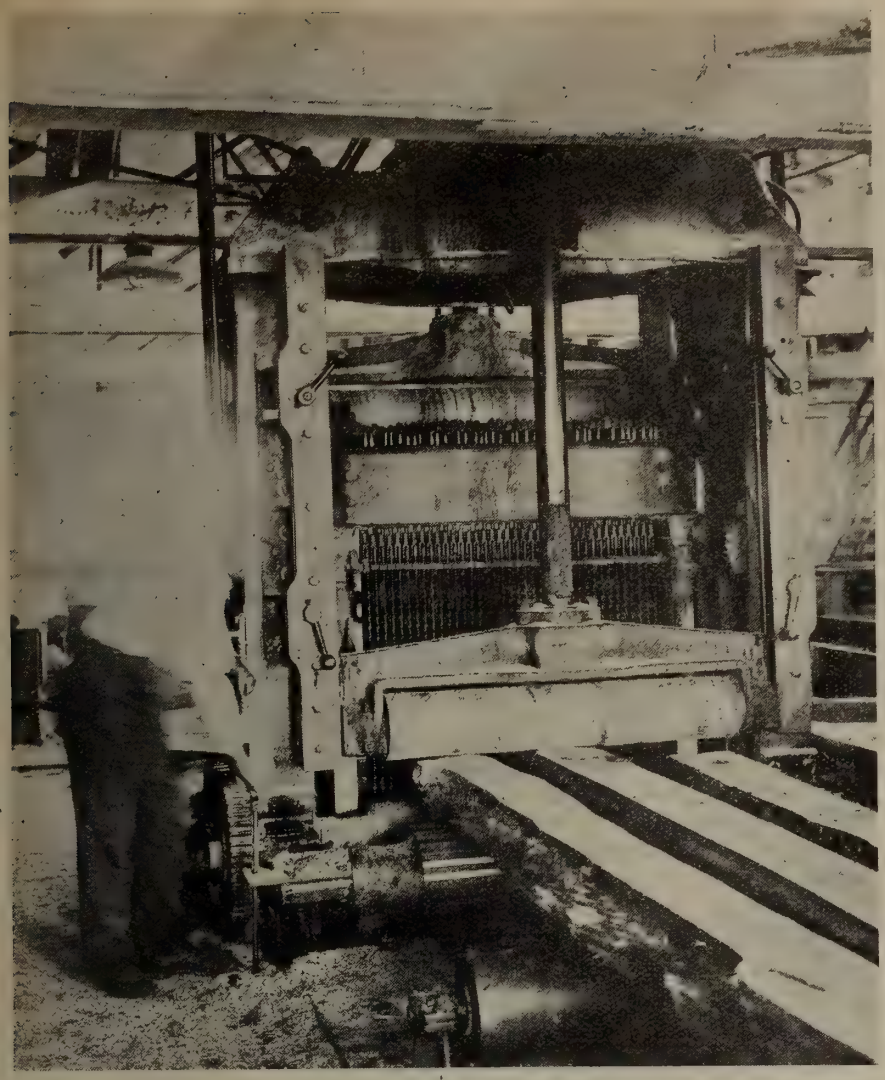


The sawdust screen which separates bark splinters and chunks from the sawdust, ensuring a regular supply of clean fuel to the Dutch ovens.

More Technical Knowledge Required

A peculiarity of the lumber business in Canada at the present time is the lack of definite technical information covering lumber in all its phases. The lumber industry in Canada covers every phase of applied science, yet very little has been accomplished along the line of Technical Research, standardization of parts, improvement in machines and methods used, or recording of data obtained.

It is believed that the time has now arrived when the Canadian lumbermen should follow the lead of our



Front View of the Big Johnson Stock Gang. This machine has a capacity of 100,000 feet per nine-hour day, and saws up the smaller logs. The feed-in rolls are independently driven by a Dake engine controlled by the lever in the right hand of the operator. The logs are slabbed by a pair of twin circulars.

friends of the pulp and paper industry and equip the "Canadian Lumbermen's Association" with a "Technical Division"; this in view of the necessity of creating a new and more economical condition throughout the whole industry.

It was in 1865 that a sawmill was built at Arnprior and has ever since been in continuous operation in the hands of the McLachlin family. The founder of the business was Daniel McLachlin, who in his early days was engaged in the square timber trade, being one of the pioneers when hewn products played such a leading part in the development of Canada. Daniel McLachlin passed away in 1872 and his sons, Hugh F. and Claude, then formed the firm of McLachlin Bros., who conducted the mill on broad, progressive lines. Claude McLachlin died in 1904 and two years later a joint stock company was formed under the name of McLachlin Bros. Limited. The other member of the firm, Hugh F. McLachlin, joined the silent majority in 1912. It was then that Dan McLachlin, now president of the firm, took hold of the proposition and has built it up on constantly expanding lines.

Dan McLachlin is an Arnprior boy, born and bred. He was educated there and later at Ottawa and Montreal. Mr. McLachlin is only forty years of age and today occupies the responsible position of president of the Canadian Lumbermen's Association, the highest office in the gift of the lumbermen of the Dominion, being unanimously re-elected at the annual meeting held recently in Ottawa. Mr. McLachlin has always taken a lively interest in municipal life and is a former mayor of Arnprior as well as vice-president of the Canadian Forestry Association and late president of the Quebec Limit Holders' Association.

The normal capacity of the McLachlin mill is between 55,000,000 and 60,000,000 feet a year. It is equipped with four single cut band saws (two Stearns, one Hamilton and one Waterous). There is a lath and picket department. The cut is principally white pine, red pine and spruce. The company conduct from eight to twelve camps every season and employ between 750 and 1000 men in bush operations. The camps are on the Petawawa, Black and Kipawa rivers. McLachlin Bros. have 14,000 square miles of timber limits in the province of Quebec and 220 square miles in Canada.

Col. George H. Johnson, chief engineer of the firm, in speaking of their large new band resaw (Waterous-Johnson), in a recent interview, said:

The new band resaw has proved entirely satisfactory and is, we believe, a step in advance of present resaw design. The data and conditions that warranted the design of this machine were about as follows:—

In our No. 3 Mill, with a capacity of approximately 300,000 feet in ten hours, it was recognized that the slab coming from the different band mills, gangs and slabbers, was the biggest trouble maker in the whole plant. The new layout was designed to immediately remove all slabs from the sawing floor, leaving the mill proper and the men thereon entirely free to manufacture lumber without being annoyed by the ever present slab. All slabs were therefore dropped behind the head saws and carried sideways of the mill to a separate resawing machine designed sufficiently rugged to take care of all the slabs coming from a plant cutting about 300,000 feet per day.

This machine would also be asked on occasion to take care of small 6" logs which would be split in halves on the main band saws. The same machine would also be required to split and resaw lumber coming back from the butters and yard to be regraded and remanufactured. We therefore required a slab resaw, a cant resaw, and a resaw splitter all combined in one machine. The machine would also require to be capable of an instantaneous change of size. The set works attachment would therefore require to be sufficiently quick and accurate to change instantly from ½", ⅝", ¾", ⅞" on, up to 4" or down as the occasion demanded. The following conditions were therefore laid down as necessary to be incorporated in the new machine:

The cutting capacity of the saw blade would require to be sufficiently great so that it would be possible to feed slabs into the machine as rapidly as the saw could take care of them. This condition was met by a 12" saw blade running 10,000 feet per minute.

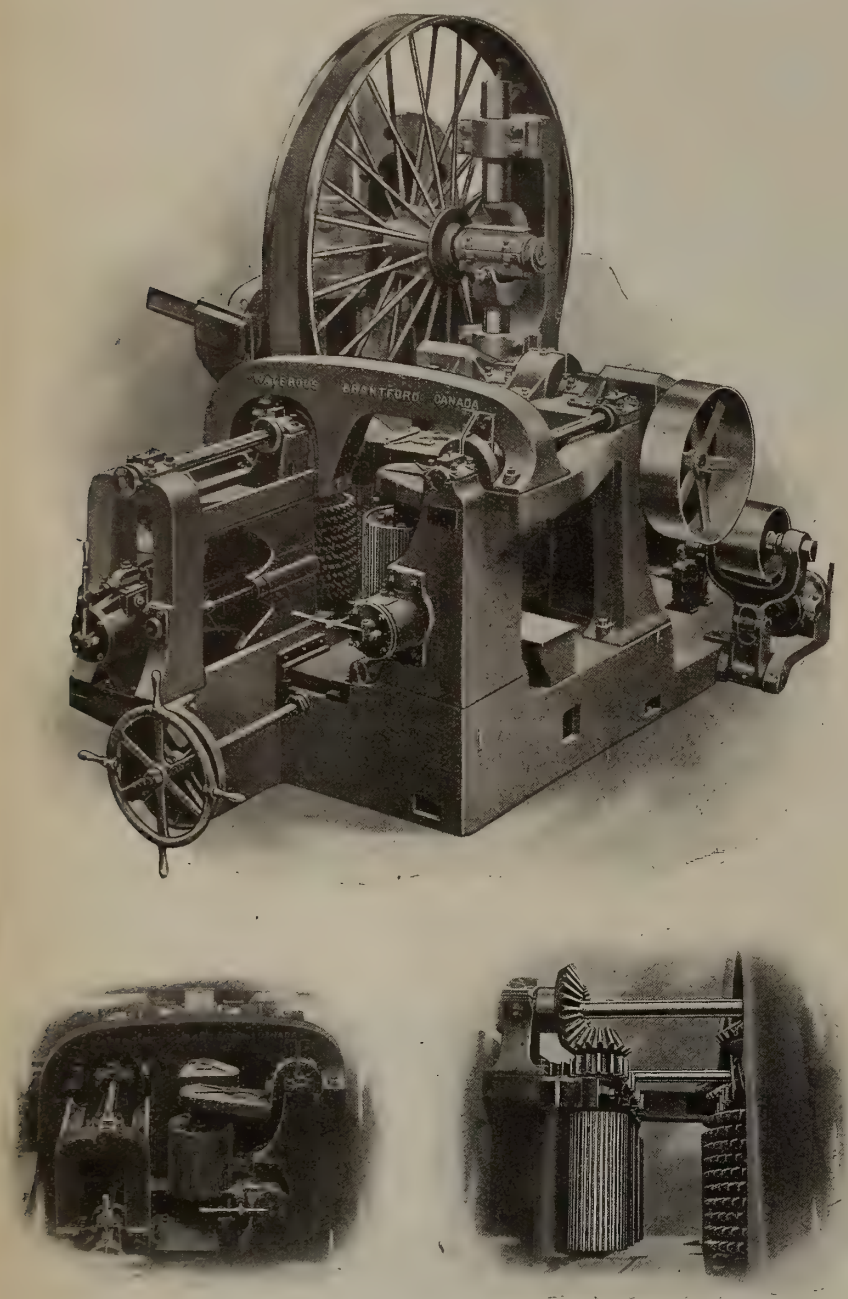
The press roll arrangement and the swinging arm and parallel roller operated by air cylinders has proved to be ideal, as it has met every condition easily. It was decided that no shafting, gears or mechanism be incorporated in the design of the machine under the bed plate; all mechanism to be kept above the machine where it would be open to inspection and lubrication at all times. All gears were required to be of cut steel enclosed and running in grease. All bearings and thrust collars to be of the finest babbitt, incorporating the Randall Graphite Sheet Lubricator in all babbitted bearings. No variable friction feed gear would be required as the capacity of the saw was sufficiently ample to take care of even the largest of cuts at the highest speed. The feed gear to be stopped instantly by an air cylinder operated tightener pulley, on the 10" feed belt. The elevating gear for saw changing to be operated by a Dake reversible air engine.

The saw guides are also air operated, the control of the pressure on the press rolls to be susceptible of instant change. This was

Front of resaw, showing the swinging press roll. The belt tightener operate by an air cylinder enables the feed to be stopped instantly.

brought about by the incorporation of a Davis Pressure Regulator in the feed pipes of the different air cylinders.

The whole machine would require to be over-designed so that no possibility of failure or stoppage in working hours would be expected. The foregoing conditions have been met by the machine supplied by the Waterous Company in every respect. In some of its features, the machine exceeded expectations, and there was no difficulty in taking care of all the slabs and resawing from 300,000 feet of lumber with comparative ease. The machine is fitted with its own edger. The vertical resaw for this particular service has many points of



The new vertical band resaw installed.

advantage over the horizontal machine, the principal being the ease with which the lumber and the slabs are separated behind the resaw, the slab falling by gravity to the slash chains and the lumber falling in the other direction on the edger table bench.

Selling Both Material and Ideas

Successful merchandising today in the lumber line requires much more knowledge, aptitude, study and originality than, for instance, does salesmanship in a large departmental store. One who visits the various counters in a mammoth mercantile establishment is often amazed at the calibre of the clerks, not to say the indifference. Many know little or nothing about the goods they are selling, beyond the name of the article and the price. Ask any question relating to the wear, service, special features, process of manufacture or construction, and superiority over other lines, and there will come from a large percentage of the staff a shrug of the shoulders accompanied by the aimless words "I don't know."

Although not exactly analagous, the retail lumberman today must do something to develop business and turn over his stock beyond merely keeping lumber, lath, shingles, sash, doors and interior trim. He must exert himself beyond a mere recital of the grade, the price and the number of feet. The demands of the age require specific service. Greater attention must be paid to satisfy the varied wants of the public. Some most progressive yardmen now have well-equipped and convenient showrooms, display windows and other facilities, and are, at the same time, establishing what is known as a Service Department.

In this connection an interesting interview with a representative Western Ontario retail lumber dealer appears in another column of the "Canada Lumberman," showing how, by forethought and prompt execution on his part in the way of furnishing designs, plans and specifications, he has been able to gather in a large amount of business which otherwise might not have come his way, and, at the same time, has pleased and delighted his customers.

There is no doubt that an Architectural Department will constitute one of the important branches of the retail lumber yard and its operation in the future. It is true that in Western Ontario dealers have, through their association, plan books which are of much benefit and assistance. The association is able to furnish through its Architectural Department a service that is bright, up-to-date and helpful. All dealers, do not belong to such an association, and very few are in a position to employ a trained architect to undertake construction service and go into details.

Recently an interesting article on "The lumberman as an architect" appeared in the "Mississippi Valley Lumberman," which points out that, so far as the average retail dealer in wood goods is concerned, be he the owner of a yard or the manager of a yard that belongs to a system, he cannot go into the study of architecture, but he should be equipped to give a form of service which will on occasions prove profitable to him. Even the most comprehensive plan system does not provide for every emergency. Stock plans may be ever so varied but they will not include house designs which will suit everybody. Where, to suit the pleasure and desire of a patron, it is necessary to depart from the stock plans available, a fair knowledge of the fundamentals of architecture will enable the dealer to give full satisfaction and to hold a bill of material for his business which might otherwise never be sold, or which might go to another dealer.

If, however, the average home of the future is to be both pleasing and practical, somewhere along the line between the lumber yard and the plot of ground on which it is to be built some architectural knowledge must enter. Very few people are able to visualize a completed structure from the evidence of a set of plans, and if the dealer who is trying to sell the materials for the structure is able to convey to his prospective patrons some idea of what the plans mean —what the building will look like when finished—he will find it much easier to sell the materials.

The industry of selling building materials is getting away from the selling of just materials. Just so far as it develops the selling of homes—of ideas—will it continue to prosper. At least one association architectural service offers something in the way of plans which can be easily read by anyone ignorant of the meaning of flat plan drawings. The plans submitted by this service represent the view of interiors which would be obtained from a point above the structure if the ceilings were lifted off. But this service does not offer a change in a design which is not altogether pleasing. So, if the dealer has a sufficient knowledge of architecture to enable him to make alterations in plans to suit the desires of a patron, he will find it profitable.

The farm houses of yesterday, and too many of them of today, are neither convenient, practical nor pleasing to the eye. Too often the front door opens from a single step above the ground directly into the main living room, and the back door directly from the yard into the kitchen. They have out-door cellarways and no way of getting to the cellar from the interior. They have no pantries, no built-in cupboards, few shelves, and closets that are too small and too few. Access to the second floor is gained by means of a narrow stairway between two walls, with no window to light it. From the time the first cold wind of fall comes down from the north until spring is in full sway, the house is hermetically sealed, and there are no modern ways by which it can be ventilated.

Plan service by the retail lumber dealer, coupled with as much knowledge of architecture as he has time to acquire, will result in better country homes and prevent many a farmer's sons and daughters from seeking fancied relief and pleasures in the congested centers of population.

Looks for Good Rural Trade in Fall

The Northern Lumber Mills of Cobalt, Ont., which cut over 4,000,000 feet last year, say that the stock on hand at the present time is about 50% of what it was a year ago, and add the demand at the present time is quiet and increasing. F. L. Baillie, manager of the company, states that prices of green stock have gone back from 15 to 20% and sales have been slow, but they look for a fair year, as the 1921 cut was going to be small in the district. The log output in and around the Cobalt district would, he said, be only about half of what it was a year ago.

Pulpwood and Its Varied Activities

Ontario Status in Pulp Arena

Speaking before the Foresters' Club of the University of Toronto recently, Edward Beck, of the Canadian Pulp and Paper Association, dwelt upon the resources, consumption and means that are being taken to replenish the stock of pulpwood in Ontario. He said the estimated annual consumption in the province was 1,200,000 cords. Allowing for all waste, it was estimated that the supply would last for 50 or 60 years.

There was invested in the pulp and paper industry of Ontario $95,281,040, with a total of 38 establishments in Ontario. Ontario produced in 1919 498,792 tons of paper of all descriptions; 246,430 tons of chemical pulp and 351,572 tons of mechanical pulp, or approximately 50% of all the paper; 34% of the chemical pulp and 35% of the mechanical pulp turned out in Canada. The value of the paper produced in Ontario amounted to $39,930,474, the largest item being 342,254 tons of newsprint, valued at $23,958,566.

Mr. Beck sounded a warning note against the practice of exporting unmanufactured logs, and told of the situation which had arisen across the border through lack of foresight in the matter of timber conservation. "We are," said Mr. Beck, "just as tardy as they have been over there in coming to a realization of the limits of our forest wealth and to the knowledge that we cannot continue indefinitely slaughtering and wasting our forests without an intelligent effort at renewal and replacement unless we want to encounter ruin."

May Increase Cut of Pulpwood

The Provincial Legislature for Quebec Province has decided to place the Crown lands under the control of the Department of Colonization instead of keeping them in the Department of Lands and Forests. The object is to facilitate the settlement of lands suitable for colonization and it is expected that many areas now covered by pulpwood will be cleared by farmers and the pulpwood put on the market. The sum of $5,000,000 is being devoted to the promotion of colonization, and there is a plan for a new railway through the Temiscamique region. When this proposal was introduced in the Legislature, the Hon. Mr. Mercier, Minister of Lands and Forests, gave some figures to show the tremendous progress of the lands and forests in the Province of Quebec. The revenue from lands and forests during 1896-1897 was $853,427, while in 1919-1920 it had reached the sum of $2,604,150. In 1896-97 the whole revenue of the Crown damains amounted to $879,893, and in 1919-20 it had reached the total of $3,033,537.

Mr. Mercier also dwelt upon the devolopment of the pulp and paper industries in the province. He pointed out that in 1881 there were 5 pulp mills with a capital of $92,000, and in 1919 there were 37 pulp mills and 26 pulp and paper mills capitalized at $241,244,704. The pulp and paper industries had naturally resulted in a very extensive development in the extension of hydraulic powers in the province. The Minister also dealt with the protection of the forest reserves of the province and showed how the government had taken every possible precaution to save for the future the great forest resources of Quebec.

Pulp Wood and Land Grants

There have been conjectures as to the actual effect, upon the development of our paper and pulp industry, of the policy whereby pulp wood cut upon Crown lands is reserved for manufacturing purposes at home, and not exported for use in foreign mills, says a Montreal paper. This reservation may have caused plants to be erected here, which otherwise would have been located in the United States. But there is not, to our knowledge, any instance on record, where an American mill, situated in a depleted forest region, has been transferred to our territory. This, or going out of business, or confining activties to the making of paper with imported pulp, would be the only alternative for such a mill, were it not for possible wood supplies from privately owned lands in Canada.

The time must come when the cutting of timber on private property will be regulated here, as it is in Sweden, for the general welfare. But sufficient unto the day are such small mercies as a decrease of some 300,000 cords in the exportation of pulp wood from Quebec during the last year. The decrease was brought about as one of the results of a conservation measure, very properly taken by the provincial authorities, who caused mill owners to curtail somewhat, not only in the common interest, but in their own as well lumbering operations upon the limits they hold under license. To compensate for the consequent deficits in material, for local plants, purchases had to be made on the open market, in connection with American buyers, who were generally at the disadvantage of having to meet greater transportation charges.

The Minister of Lands and his chief forester merit warm commendation for initiating the measure, and for applying it so tactfully as to raise no opposition nor resentment. We must eventually arrive at the point where the forest will be exploited in such a manner as to insure continuity of supply, or, in other words, where the amount of wood cut will be within the natural increment.

As regards the prevention of pulp wood exports, it is unfortunate that the forest in private hands, even apart from the farmers' wood lot, should represent a wide area which goes on increasing whenever land subsidies are given to encourage railway construction. Not only are grants of the sort at cross purpose with the popular and sound policy of preserving our wood for the home industry, but they are no longer in keeping with our economic and financial status. Land grants to Quebec railways are almost invariably located in the best forest reserves, and, therefore, such grants actually entail far greater sacrifice than would accrue from an adequate money subsidy.

It does not appear that, under present conditions, the practice under criticism will be repeated in the future. But some remedy for the harm it has wrought in the past might follow upon a legislative enactment, empowering the Government to convert at will, and without duress to the grantee, any land subsidy, still available, into a corresponding cash subsidy on a reasonable acre-price basis.

Pulp and Paper Exports Decline in February

For the first time in almost four years the total value of exports of Canadian pulp and paper registered a decline from the level of the corresponding monthly period of the previous year, the figures for the month of February last, falling below those of 1920 by the moderate amount of $723,112. Only in the category into which newsprint and other manufactured papers fall in the classification, did the figures for last month exceed in value those of February, 1920, the gain of $735,451 being due entirely to the higher prices prevailing in the first quarter of the current year.

The detailed returns indicate that shipments of newsprint during the month aggregated some 52,800 tons against some 63,300 in February of last year, a decline of nearly 10,500 tons or 16½ per cent.

For the past eleven months expiring with February, the value of exports of pulp and paper combined reached the record total of any similar period in the history of Canadian industry, at well upwards of $151,000,000, against nearly $93,000,000 in 1920, and $74,000,000 in the corresponding interval in 1919.

Pulpwood Business at Standstill

The pulpwood business in Quebec, like the lumber trade, is practically at a standstill. Quebec dealers spoken to say they cannot account for the non-demand from the United States, except that the mills in that country are still stocked with wood and paper products. In the meantime the dealers, apart from those who were indebted to the banks, are not worrying. They say they can and will wait until conditions are better and the prices go up again. The French Canadian farmers who for some years past made pulpwood on their farm woodlands, have stopped making. They are doing just as was pointed out some months ago, taking things easy and vow they will cut no more pulpwood until the prices for the article again soar. The French Canadian habitant is an unsophisticated philosopher in his own way and cannot be moved after he has signed up things and come to a conclusion. He made heaps of money during the war that went to pay off all farm mortgages, and is still making money from his farm products, obtaining prices during the European conflict that he never hoped for.

Conferences for Closer Co-operation

The Laurentide Company, Limited, Grand'Mere, P.Q., have inaugurated a series of conferences between the inspectors, cullers, and scalers of the Logging Department, with a view to secure closer co-operation between the woodsmen and those in the mill; to give them a better conception of the importance of various problems, and also to afford opportunities for the interchange of ideas and suggestions as how best to handle these problems. A great deal of the work

is carried on at a considerable distance from the mills, and there is comparatively little contact between the men in the woods and those at the mill. This does not make for an understanding on the part of the woodsmen as to the relation of their work to that at the mill. The Laurentide Campany have, therefore, arranged for visits to the mills, so that the men can see for themselves the sort of wood that can best be used and greater judgment exercised both in the sawing and culling.

Rapid Unloading of Pulp Wood

A smart performance in the way of unloading rail wood was accomplished by a gang of men working for the Laurentide Company, Limited, Grand Mere, P.Q. Each man averaged 5.15 cords per hour. During the month of February 295 cars, containing 4939 cords were unloaded, this being 5.01 cords per man per hour. The wood was peeled, ready to be placed in the block pile.

New Pulp Plant for Algoma District

A pulp and paper mill in the district of Algoma, north of the Transcontinental railroad near the Thunder Bay border line on the James' Bay height of land is almost certain to be established before the duration of very many months. The Ontario Government is now asking tenders, which will be received up to June 15, for the right to cut pulpwood and pine timber in a large area situated near the Nagagami River, which wiuld likely be the place for the erection of a mill. One of the conditions of tendering is that the successful tenderer must build a pulp and paper mill near or on the territory referred to, and no tenders are being accepted unless accompanied by a marked cheque for $50,000. which will remain on deposit until such a mill is built.

Large Earnings by Riordon Co.

The annual meeting of the Riordon Company will be held on April 21st. According to official information, the combined earnings of the Riordon Pulp and Paper Company for the six months ended June 30th last and those of the new Riordon Company from that date to December 31, 1920, amounted to $4,642,630 from which there was written off for depreciation, depletion and other reserves, a total of $958,042, leaving net earnings available for interest charges at $3,684,-588.

After meeting interest charges, amounting to $614,213, there remained a balance available for application to dividends amounting to $3,070,375. From this was deducted $480,000 for dividends on the outstanding preferred shares in the hands of the public, with $525,000 distributed among holders of the common securities, leaving a combined net surplus for the year after all charges of $1,965,385.

The earnings figure detailed above do not take into account the profits accruing to the Riordon Company from the operation of its subsidiary, the Gatineau Company, which produced in the twelve monthly period in excess of 100,000,000 feet of pine lumber, and showed net earnings, after interest charges in excess of $400,000.

New Ontario Town Has Been Created

A bill was recently introduced by Premier Drury in the Ontario Legislature creating the town of Kapuskasing, near the site of the old soldier settlement colony.

Provision is made for the expenditure of $400,000 on land and construction of houses to put the new town on its feet, and for the expenditure of $100,000 for sewers, waterworks and local improvements. For loans made the Government will take municipal debentures issued by the Council.

Where Canadian Pulpwood Crosses the Border

As my last letter was a short note relative to statistics on pulpwood and paper, I will try to give a summary of the points where Canadian wood enters the United States, writes G. B. Oberton, of Canton, N.Y. I will start at the state of Wisconsin and refer only the Fox River group. This includes all mills on Fox River from Lake Winnebago to where the river empties into Green Bay. A large percentage of the wood used here comes from Canada and enters at the following points:—

Across Lake Superior by vessels and in rafts to Ashland, thence by rail to the mills.

By vessel and in rafts to Green Bay, thence by rail and Fox River canal to the mills.

Railroad transportation by way of Sault Ste. Marie.

Now this does not imply that these mills are operated entirely on Canadian wood. It simply means a large percentage comes from Canada through the sources named. The local supply comes from the northern peninsula of Michigan and the northern part of Wisconsin. Canadian wood enters Detroit partly by boat and on cars in transit. Shipments of wood are also made to Erie, Pa. The water shipments come via St. Lawrence River, Lake Ontario, Welland Canal and Lake Erie. Wood delivered at the above-named point is used in the mills of Pennsylvania. Shipments are also made to these mills in cars via Buffalo and Niagara Falls, coming chiefly from Northern Ontario.

Coming east, the next place of importance is Oswego. This port is a water terminal for wood from the lower St. Lawrence River. The wood is delivered to mills on the Oswego River, a few miles away. Cape Vincent is also another water terminal for wood coming up the St. Lawrence. This place is one of the sources of supply for the mills on Black River. Ogdensburg is another transfer point for Canadian wood. As in the case of Oswego, wood is shipped by barge from the lower St. Lawrence and transferred to cars.

The large mill at Pyrites, owned by the "New York World," gets its supply of wood from the Ogdensburg terminal. Waddington, a few miles below Ogdensburg, is another water terminal for wood arriving from the lower St. Lawrence. Canadian wood is transferred from boat to cars and then delivered to the Remington-Martin Paper Company at Norfolk, N.Y.

Disregarding a mill here and there, I will next note the mills within a radius of twenty miles of Glens Falls, N.Y., which I will call the Hudson River group. Wood from Canada finds its way into this district by the following routes:—

St. Lawrence River, thence Richelieu River, Lake Champlain and Champlain Canal.

D. & H. RR. via Rouse's Point.

Central Vermont and Barton & Maine railroads with their connecting roads in the Province of Quebec. Wood from Canada enters New Hampshire and Maine from the west and north via Grand Trunk and Canadian Pacific railroads. Portland, Me., is also a water terminal for wood from New Brunswick seaports. The wood is loaded on to cars and shipped to various mills in Maine, notably those of the International Paper Co.

Now some one may ask what percentage of the wood used in American mills is Canadian? The returns for the last year are not completed. A few years ago, however, Canada furnished 29 per cent. of the total amount of spruce used in American mills and poplar 16 per cent., and since then there has been a great increase. The figures quoted apply to the entire list of states, and do not afford an idea of the percentage of Canadian wood consumed in the regions that I have mentioned. For instance:—There are states that do not use Canadian wood on account of distance, notably, West Virginia, North Carolina and several others. Pennsylvania uses a large amount of hemlock and hardwoods, and only a comparatively small amount of spruce from Canada. This brings the average percentage of Canadian wood (as it applies to the entire list of states) down to the figures quoted from the "Department of Commerce and Labor." For instance, we will take the three groups of mills already noted, namely, the Fox River group in Wisconsin and the Black River and Hudson River groups in the state of New York. It is quite safe to say that at least 60 per cent. of the wood is from Canada. It will average higher than that for the Hudson River group and perhaps 75 per cent. for the Black River plants between Carthage and Dexter, inclusive. The average does not include the St. Regis, Gould and Dexter sulphite companies, who, by the way, are large woods operators in the Adirondack region nearby. I have only noted groups of mills using pulpwood. There are, however, a large number of American mills that do not use wood. There are five mills in the United States employing over 1,000 hands, of which two are in Maine, one in Pennsylvania, one in Maryland and one in Ohio. The mill in the last-named state is located between Dayton and Cincinnati and does not use pulpwood.

Less Forest Fire Loss During 1920

No loss of timber or equipment has occurred in the territory comprising several million acres protected by 66 wardens maintained by the Western Forestry and Conservation Association, and in general the forest-fire loss in the Northwest has been less this year than last. Washington has had 754 fires in 1920 against 847 in 1919 and lost less than 42,000,000 ft. of timber, compared to 60,000,000 ft. last year. Of the 754 fires, 120 were due to campers, 74 to lightning, 60 to cigarettes. There has been an unusual proportion of lightning fires in Oregon this year but less loss than last year. The same is true of Montana and of other western states.

The Harrison Lumber & Pulp Co. of Vancouver has been granted a provincial registration. The capital stock is $15,000,000. The company which is headed by Sir Douglas Cameron of the Rat Portage Co., will start work almost immediately on a new pulp mill which will be erected adjacent to the company's mill at the mouth of the Harrison River, with a capacity of 60 tons of kraft pulp per day. The initial cost of the plant at Harriston will be $3,000,000. The company's plans also include the construction of a pulp mill and possibly a paper mill at Kitamat, B.C.

How Should Cost of Lumber be Determined?

The Elements of Cost, Market Price, the Quantity and Grade of Production and Gauging Value of the Grades at Mill are Important—Some Timely Pointers

By A. J. Redemski, Industrial Engineer, Chicago.

A number of questions have frequently occurred to me in connection with the determination of lumber costs, and though I have looked carefully through the literature on this subject, I have not found a presentation of these questions, nor an answer to them. I hope, therefore, that you will find these worthy of discussion, and if my conclusions concerning them are faulty, I may have the benefit of your arguments, all with the object of promoting the interest of our profession in this field.

Briefly stated, the questions that I want to submit are these:

1—What elements of cost shall constitute the stumpage or timber depletion charge?

2—Shall actual cost or market price be used as a basis for charging logs to the sawmill?

3—How shall quantity and grade of production be determined?

4—Can costs be established for the several grades of lumber produced by a mill?

What Elements of Cost Shall Constitute the Stumpage or Timber Depletion Charge?

In considering the first question, which relates to the stumpage or timber depletion charge, let it be assumed that a company is organized which acquires timberlands of sufficient acreage to supply the mill with a cut for twenty-five years. A timber cruise is made, which develops the fact that, in order to liquidate the purchase price, after setting aside a nominal valuation for the underlying land, a depletion charge of $5.00 must be made for every thousand feet of timber logged.

In addition to the liquidation of the purchase price there will accrue during the period of operation, such carrying charges as taxes, and in all probability, interest on an indebtedness incurred in connection with the purchase.

This matter of timber or stumpage purchase is, of course, a usual condition with sawmill operating. Without such an asset and the rights it carries the value of a mill property might very quickly be jeopardized and the timber in the locality acquired by interests antagonistic to the people who started the lumbering operation.

For these items, I believe, a reserve should be immediately created, which would be credited with the estimated liability arising from this source during the entire period of operation and this amount written into the asset account. It would seem to me also to be proper to include in this reserve an amount equal to the interest on these prepaid expenses.

The effect of embodying these factors in the depletion charge would be to equalize the carrying charges throughout the entire period of operation and to facilitate their distribution each year against the production. It is reasonable to expect that during a period of twenty-five years there will come a time when production is curtailed and when business can least afford the burden of an unmodified tax and interest bill. In a report issued by the Forestry Service of the Department of Agriculture a statement is made that the realization or the lack of realization of the fact that these carrying charges are a controlling factor in the determination of lumber prices has during the last ten years changed the holding of lumber from a speculative to an operating propostion.

Shall Actual Cost or Market Price be Used as a Basis for Charging Logs to a Sawmill?

It may be accepted as a general condition that those companies having large exclusive holdings of timber do not immediately log them to the full extent of their requiremtnts, but purchase logs in the open market—in this way conserving their timber supply against the time when scarcity or stricter regulation of forests properties will force values upward.

Where such competitive conditions exist, I believe the manufacturer should show a loss or gain resulting from his own logging operations, and base charges for logs going to the mill upon the prevailing market prices. Further arguments may be presented in favor of this method by the fact that logging costs are apt to fluctuate considerably from month to month since these are influenced to a large extent by weather and other physical conditions. For example, continued rains will make logging roads temporarily impassable and consequently curtail the delivery of logs to a rail or waterway. Since the duration of such a condition is indefinite, men and equipment must be held in readiness to resume operations as quickly as unfavorable conditions subside.

One of the difficulties of determining the unit cost of lumber is to be found in the fact that the standards of measurement in all but the final disposition of product are not dependable. Nor can the grading of the product be definitely established until it is inspected at the time of shipment. During the period of seasoning, defects develop which are not apparent at the time of cutting. Hence the mill tally, which is sometimes used for that purpose, does not disclose reliable information.

Since these conditions prevail quite generally, there appears to be only one method upon which reliance can be placed. This method involves the making of careful monthly inventories in which the quantities, grades and kinds are detailed. The quantity and character of production are determined by adding shipments and closing inventory, and substracting from this total the opening inventory.

For purposes of such an inventory, the stock piles should be carefully estimated at the time of their erection and record of this estimate placed upon the pile, so that each succeeding inventory of that pile may be made to represent the same grading and footage as the one before. Adjustment should not be made until the pile is finally measured and inspected at the time of shipment.

By this means there will be accumulated in the course of the year, production totals in which the effect of the monthly inventories is neutralized to a large degree, and whatever variation remains unadjusted in the closing inventory will be small in proportion to the accepted production total.

Can Costs be Established for the Several Grades of Lumber Usually Produced by a Mill?

In answering this question several conditions must be considered. The proportion of upper and lower grade boards is not capable of predetermined arrangement, but depends first, upon the quality of the log out of which they are produced, and second, upon the skill with which the sawyer manipulates the log when it reaches him for dissection. Consideration should also be given here to the statement referred to in the preceding question, namely, that neither grading nor measure is definitely established until the inspection for shipment takes place. Hence some difficulties arise in allotting to the several grades a graduated charge for the material.

The cutting of these grades also takes place indiscriminately and according to the best judgment of the sawyer. Here also difficulties would be met in separating the operating costs and allotting them according to grade of product.

The value of the upper grades is created by their greater utility and consequently is not governed by the cost of production. My conclusion is that the work of the cost accountant should end with showing the log run or average cost per 1,000 feet of lumber produced, and take into account only the differences between the prices of the several species of logs cut. He may then supplement this cost by a statement showing the proportions which the production of each grade bears to the whole, and thereby point out whether an increasing cost is compensated for in the higher grade of the product.

The mill tally, I might add, is a tally made each day as production progresses or is completed on a sorting table—a record of the entire day's production. Now, the product in a double band mill amounts to approximately 100,000 feet in ten hours, and the men who are delegated to make the mill tally are not always the best inspectors. In fact, they are usually the beginners, and with distractions they do not always get a complete record of the product passing under their hands, so that, besides the reasons already given, the mill tally does not provide a reliable basis upon which to determine quantity and kind of production.

I appreciate in presenting this paper that no solution of the cost problem is brought forward, but it is presented with the idea that it may receive your discussion. If some theories can be definitely outlined and the thought of the members of this association can be brought to bear upon the questions involved, the lumber industry will consequently benefit.

Death of Progressive Western Lumberman

G. R. Elliott, Genoa Bay, B. C.

G. R. Elliott passed away recently at St. Joseph's Hospital in Victoria, which institution he entered for an operation. The late Mr. Elliott was a well-known pioneer lumberman on the Pacific Coast and was part owner and general-manager of the Genoa Bay Lumber Company's plant. He was 47 years of age and is survived by his widow, one son and two daughters.

Mr. Elliott entered business as a junior in the employ of the Victoria Lumber & Mfg. Co., and until nine years ago was in the service of that organization, rising to the position of assistant general manager. When he resigned to organize the new syndicate, he took over the Genoa Bay mill. In his relations with his employees, Mr. Elliott was most successful and never had a strike on his hands, which is a rather unique industrial record.

Mr. Elliott had a large number of friends in the lumber trade, and devoted considerable study and thought to anything he undertook. He was thorough in his methods and progressive in his ideals. It will be remembered that in the big Export Number of the "Canada Lumberman," which was issued two years ago, there appeared a splendid article written by him on the export situation, which he treated from various standpoints and in a comprehensive and effective manner. At various other times, articles from the able pen of Mr. Elliott have been published in the "Canada Lumberman."

Keeping Fires From Destroying Park

A unique souvenir which makes a very striking forest protection appeal has just been issued by the Dominion Parks Branch of the Department of the Interior, Ottawa. It forms part of an exceptionally vigorous and novel campaign inaugurated by the Branch a few years ago with a view to educating the travelling public as to the need for greater care with regard to fire while in the National parks. For three months each summer there is one dread which constantly haunts every superintendent, warden and official in charge of the parks and that is that a fire may break out in some part of the parks and, helped by favoring circumstances, get beyond control, wiping out miles of forests. The very existence of National parks depends upon forest protection. If the forests are once seriously damaged by fire the beauty of the parks is gone. Investigations carried on by departmental officials over a number of years show that the large majority of fires are man-caused. A half burnt match carelessly dropped, a cigarette stub tossed out of a car window or along the trails, the ashes of an improperly extinguished camp fire, under favourable conditions, are enough to start the mischief. The increasing stream of travel to the parks augments this danger

A souvenir now being issued takes the form of a charm or fetish such as was formerly carried by the Indians of the West to insure personal good fortune and to ward off harm and disease. It is a small aluminum coin bearing the figure of the buffalo which was believed to be the strongest "medicine" of all the animals, since the buffalo, sacred to the sun, was supposed to transfer "sun power" to those whom he took under his protection. The coin is enclosed in an attractive envelope, facsimile of an Indian pouch in which such charms were usually carried. The original of this pouch is in the Government Museum at Banff. The charm is accompanied by a small leaflet telling the Indian legend and making a forest protection appeal.

Where Lumberjacks Are Fed Well

The railways are getting men for "extra gangs" whose work of cleaning yards, clearing culverts is made necessary by the alternate snowfalls, thaws, and frosts, says a recent despatch by the alternate The tie camps are busy, and now and then has come a call for farm hands from Old Ontario. The wages run from $25 to $50 per month and board, but the quietude of the life makes it a second choice with a miner, railroad man or lumberjack. The hours are longer and, although the work does not call for the same physical exertion, it is not done in the company of a gang. There is not the crowd, chatter and movement in the evening after work. Then again, there is the all-important matter of food. The farmer of Old Ontario may not know it, but every man in the north knows it, that the miner, railroader and lumberjacks sit down to meals in their camps, which, for quantity, quality and variety leave but little to be desired. Ask the heads of concerns in Toronto who foot the bills and they will promptly dissipate the story that the men in the woods and mines live only on "sow belly, beans and blackstrap." Those days are over and the farmer who wishes to get the cost out of the north man, must do by him as he does by his horses—feed him well.

Three Vital Essentials to Re-Adjustment

H. C. Meeker, general manager of the Nicola Pine Mills, Limited, Merritt, B.C., in speaking of the 1921 prospects in the lumber trade, says:—"The enthusiasm and prosperity that may radiate from this operation and others throughout the country this year, is, I believe, dependent to a large extent on an early and satisfactory adjustment of three important factors namely, reasonable prices for building labor, essential building commodities down to a parity with lumber, and freight rates equal to those in force prior to the last 35% increase. When these vital readjustments have been substantially completed, everyone the country over should share and benefit in a period of returning prosperity and opportunities."

Why are Lumber Buyers Holding Aloof?

Writing the "Canada Lumberman," a representative Vancouver firm under date of March 23rd says:—"Very few orders are coming in and those at low prices. On the other hand, many of the mills are still closed down and those which are running, do not show any inclination to grasp at orders that are offering at present prices. There seems to be a sort of 'jockeying' on both sides. Buyers are holding aloof for no apparent reason as we cannot see that they they can hope to purchase at lower quotations at the mill and the millmen here generally are of the opinion that there is going to be an increase in prices very soon. There is also a report that a decrease of ten or fifteen cents per hundred pounds in freight rates from Vancouver to Ontario is imminent. We presume the same report has gained prevalence down east and this may have some effect in keeping off business. We all wish that the thing could be settled one way or the other very soon."

Well Equipped Club House Erected

The Brown Corporation are just completing a large employees' club house at La Tuque, Que., at a cost of $300,000.

The clubhouse is in the shape of a letter "T," roughly 100 feet by 129, with three stories and basement. In the basement are four bowling alleys, a swimming pool, twenty feet by sixty feet, lockers and showers. The gymnasium is in the rear of the first floor, measuring fifty feet by seventy. On the second floor level is a gallery overlooking the gymnasium floor. At one end of the gymnasium, a stage is erected, and the gymnasium itself will be equipped with removable seats and available as an auditorium. The seating capacity will be 460 and a fireproof motion picture box is to be built in the gallery. In the main part of the first floor, there is a large entrance lobby, with reading and billard rooms. Off the reading room, the ladies have their own rooms with a small kitchen and cloak room. There is a separate entrance to these rooms. On the other side of the building are similar apartments for the men, with a stairway to the locker room in the basement. The second floor may be used either for one large room for dancing or subdivided into smaller rooms suitable for club and banquet rooms. On the third floor is a four room apartment for the janitor, and seven single rooms for bachelors.

Building Costs are Down One-third

You can safely say that to-day the cost of building construction is down to normal, which means a decrease in cost compared to last year of from 30 to 35 per cent.," declared L. C. Reynolds, business manager of the Builders' Exchange and Construction Industries in an interview on the coming building season in Toronto.

"The reason for the slump in building construction during the past few years has been high labor and material costs," said Mr. Reynolds. "It was not because we have not needed buildings. There has been a tremendous amount of deferred building which high costs have held up.

'Three elements enter into the costs of building. The potential value is roughly 5 per cent.; contractors' profit, 15 per cent., and the remaining 80 per cent. is made up of pay envelopes. Material costs are largely made up of labor costs. Take lumber, for instance, which is worth a certain amount per thousand feet. The potential value is trifling. The tree in the bush is not worth very much as it stands. The costs mount up with the labor of cutting it down, hauling it to the river, transportation to the mill, and labor at the mill.

Canadian Spruce as Seen by the Britisher

As a Rule the Product from the Dominion is Badly Sawn, Not Properly Graded and but Little Attempt Made at Sorting

By D. A. Taylor, London, Eng.

As a Canadian I have had the privilege of two years experience in London (in the box, case and shook trade) of handling and dealing in the various soft woods of Norway, Sweden, Finland, Germany, Austria, and of course Canada.

The experience has been very interesting to say the least, in observing, not only the different methods employed in sawing, but also the variation, in the scale, of painstaking effort that is reflected in the manufacture (both as to the standards of size and quality of the sawing contributed by the various countries) which is so vast, and has such enormous commercial consequences, that it calls for recognition most insistently.

Norwegian and Swedish goods are all gang or "frame" cut, finely sawn, and true to size, bright, clean and well graded; these goods bring top prices, and can be disposed of when other badly manufactured, but otherwise good timber, is a drug in the market.

Finnish goods are rotary and frame cut, but are not up to the standard in size and finish.

German goods are frame cut, principally, and exact to size, and the finish in sawing is perfect.

No doubt the method they employ in preparing the logs for the mill is a powerful factor toward the maintenance of their high standard of manufacture.

The logs are cut, barked, piled and allowed to cure for twelve months before sawing, so that the problem of shrinkage is overcome.

Jugo-Slavakin goods are principally rotary cut, and compare very favorably in quality of manufacture.

Below Standard in Manufacture

The fact that I wish to call attention to in this article is, that Canadian spruce is far below the standard in quality of manufacture. There are exceptions of course, but as a rule it is badly sawn.

We had a well-cut shipment from Quebec this summer, band-sawn, square-edged, and full sized; this lot sold as fast as it was put up, and brought from £6 to £8 per standard more than badly cut stuff—Why? Because a little more care had been taken in the manufacture. Each responsible individual in the organization was doing his duty, and the consequence is, the firm have a recognized reputation. The lumber has been enhanced in value by several pounds per standard, the importers have no difficulty in disposing of the goods, and there is general satisfaction wherever it is used.

We will take another shipment for instance, of badly cut goods. There is not any grading done, or any attempt made at sorting. You get 3 x 7 for instance for margarine box frames, there are not two alike in width or thickness; apparently one quarter of an inch has been taken off one and added to the next, etc., so that you have to size some deals to 6½ in., others you have to rip ¼ in. off to bring to your required size of 7 in.

The consequence is, another "recognized reputation" is made; buyers will not touch it if a good brand can be had, otherwise good timber (if properly cut) will bring the price of the lower grades of the well manufactured article, to say nothing of the general dissatisfaction caused by its distribution.

Careless Manner of Conversion

As a matter of fact I have seen Canadian goods that I have been ashamed of when stacked alongside of Norwegian and Swedish goods, and it is merely due to the careless manner of conversion, the quality of our timber cannot be questioned.

I know the difficulties of saw-milling, the output that has to be maintained, the tendency to casually inspect our goods and think they are a fair average, but it is quite another matter to re-saw these goods, trying to get a 7 in. out of a 6¾ in or a 6⅞ in. Believe me it is much easier, and better, to make and maintain a good reputation than to eradicate a bad one.

We talk of economics, re-forestation, etc.; still we take the goods we have in hand and manufacture them so that they depreciate in value to the tune of 25 to 30%, besides giving ourselves a black eye in the world's greatest mart.

Live Publicity for Retail Lumbermen

If there is one live wire in the retail lumber ranks it is J. B. Mackenzie of Georgetown and Acton, Ont. He thoroughly appreciates the value of publicity and never neglects an opportunity to keep his business, his stock and his service before the public.

Mr. Mackenzie recently issued some illustrated literature in the shape of an eight page folder, from which he says he is getting splendid results. He devotes ½ of 1% of his annual turn-over to advertising and is well satisfied with the outcome. "Believe me," adds Mr. Mackenzie, "we could spend double the amount with profit. We recently mailed 2,500 copies of the circular, entitled 'Of Interest To You,' to farmers who have insurance policies in the Halton Fire Insurance Co." By using this list Mr. Mackenzie says that they got the names of those who were prospective customers and that business is looming up well at the present time. Mr. Mackenzie is satisfied that there will be a good normal trade in and around Georgetown, during 1921.

The circular in question presents splendid cuts of some of the barns which Mr. Mackenzie has built. One shows a metal clad barn erected during the past year for a Chinguacousy township man. Mr. Mackenzie also shows a plank frame barn covered with B. C. cedar, dressed one side, edged and shiplapped, which he built for Prof. Hutt near Guelph.

In his announcement, the Georgetown retailer of wood goods says: "We are prepared to quote you a price on all material for this barn, delivered at your nearest railway station, and, if necessary, can arrange to have same erected."

Mr. Mackenzie also shows a snug implement shed, suitable for the farmer and states: "We have plans of several implement sheds prepared, and, if you will write or phone us particulars, we will tell you what the materials will cost or give you the cost of the building erected." Then there stands out in red letters the slogan, "House Your Implements. We are Ready to Help You." Mr. Mackenzie also deals with other phases of his service and stock, such as hardwood floors, beaver board, cement, garages, silos, doors, etc.

Some reference is also made to houses, and an illustration of a fine home is given. Touching upon his facilities in this respect Mr. Mackenzie says:

Only One Safe Way

There is only one safe way to set about building a home. You must build by plan and not by guess.

A man's house is his castle and besides being comfortable and convenient ought to express the individuality of the owner. It should have some of the arrangements which the owner likes rather than a house built from a stock plan.

Bring me your own individual ideas in house building and I have the building knowledge and experience to incorporate your ideas into a practical plan.

Besides furnishing plans and specifications complete, have a full line of house building materials on hand, such as rough lumber for frame, interior finish, flooring, doors, etc.

We have special machinery for the making of stairs complete in the mill.

Our sash are made from the best quality of first growth white pine or B.C. cedar. They are carefully machined and well sanded.

Bring or send your requirements and we will be pleased to quote you a price on lumber and interior trim or a price complete.

Planning a house requires careful consideration. Now is the time to plan and prepare before the rush of the spring work begins. Start early and avoid having to wait.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

Wanted—White Pine

One or more cars 4 and 5/4 stained, good good shoft white pine. Mell & Sons Lumber Company, Philadelphia, Pa. 6-9.

Wanted

Logs to saw, or will buy sawmill with capacity of about 15,000 feet with a good season's cut. Address "Lumber," 103 Irving Ave., Ottawa, Ont. 7-8

Wanted Lath

Prices on Hemlock, Pine and Spruce lath; delivered Detroit rate. Brewster Loud Lumber Co., No. 1307 Majestic Bldg., Detroit, Mich. 3-8

Lath Wanted

Will buy any quantity, White Pine, Spruce or Hemlock. Please quote your best cash price f.o.b. Toronto. C. W. James Jr., 358 Greenwood Ave., Toronto. 6-13.

Wanted—Timber Lands

Large or small tracts of softwoods and hardwoods in Ontario. Address Lock Box 262, Sault Ste. Marie, Ont. 4-7

Lumber For Sale

FOR SALE—Hickory dimension squares and flitches. It is true economy to purchase our stock sawn to your net dimension. J. Murchison & Son, Dickson, Tenn. 6-9

Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co., Jamestown, N.Y. 6-t.f.

For Sale

300,000 feet Birch in logs ready to start sawing under National rules. Offered as No 3 common and better. Apply P.O. Box 6, Victoriaville, Que. 6-tf.

FOR SALE—3000 Cords of Mixed White Birch and Tamarac, ready for shipment 10th December, 1920, at Stone Siding, A.E.R., 28 miles west of Sudbury. For further particulars apply to C. G. Hyett, Worthington, Ont., Soo branch C. P. R. 24-5

Spruce

5/8 x 3
5/8 x 4 & wider
3 x 8—10/20'

Dry—Merchantable

J. E. Harroun & Son
Watertown, N.Y.
7-8

Cedar and Maple

We offer at attractive prices two cars cedar squares 6 x 6, and 4 x 4 running largely 16 ft. long. 2 cars 1" and 2" cedar edged; 2 cars 1" hard maple No. 1, 2 and 3 Common.

Peterborough Canoe Co., Limited,
4-7 Peterborough, Ontario.

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Saw Logs For Sale

About 15,000 sawlogs, pine, spruce and hemlock, for sale by piece or feet B.M. on Vermillion River near White fish Station, C.P.R. or will give job of sawing. Con. McGuire, Whitefish, P.O., Ont. 6-9.

Machinery Wanted

WANTED—Two heavy log or lumber trucks. Box 257, Canada Lumberman, Toronto. 11-t.f.

WANTED—Pulpwood barker (Moreau) of recent model in first class condition. H. E. Goodhue, Sherbrooke, Que. 5-8

Wanted

Double drum steam log jammer or steam hoist. Will buy or rent. Advise size, condition, price, etc.

F. STANLEY KNIGHT,
5-8 Meaford, Ontario.

Machinery For Sale

For Sale

Box-Board Printer, 18 x 44", F. X. Hooper two-color, knocker feed, $975.00. All kinds box machinery for sale. Chas. N. Braun Machinery Co., Fort Wayne, Ind. 7-8

FOR SALE—Complete saw mill equipment, including three horizontal boilers, Corliss engine, Buckeye engine, double edger, circular saw with top saw, steam carriage and nigger and extra heavy transmission complete. Box 503, Canada Lumberman, Toronto. 5-8

For Sale

One covel automatic band saw grinder for double cutting saws; a bargain; immediate shipment. The Muskoka Wood Mfg. Co., Huntsville, Ont. 6-9.

For Sale—Locomotive

One 28 Ton 3 Cylinder 8 x 10 Standard Gauge Lima Geared. Located in Canada. Box 376, Canada Lumberman, Toronto, Ont. 19tf

For Sale

Moreau Barker and Robb 30 H.P. boiler and engine on wheels. Complete outfit for rossing. Sell separate or together.

J. D. BUCKLEY,
7 Newcastle, N.B.

For Sale En-Bloc

Complete Saw Mill Equipment, including one four Block Hamilton Carriage. One pair heavy twin engines feed complete and steam nigger. One three block E. Long carriage with eight inch gunshot feed and steam nigger. One heavy three saw edger, W. Hamilton make. Three 75 H.P. boilers complete with Dutch ovens and stacks. One 90 H.P. engine and fly-wheel complete. One lath and shingle mill. Complete filing equipment. One refuse burner, shafting pulleys, transmission, etc., complete. Apply Box 543, Canada Lumberman, Toronto. 7-12

One Mitts & Merrill No. 2-C Hog in first class condition. The Laberge Lumber Co., Limited, Sudbury, Ontario. 5-8

FOR SALE—Guaranteed rebuilt filing room machinery. Send for monthly mailing list. Ge Bott Mfg. Company, Big Rapids, Mich. 6-9.

For Sale

One 12 in. x 16 in. slide valve engine with heavy belt wheel 14 x 72 ins. in good condition; good sawmill power. Geo. Craik, R. R. No. 2 Mossley, Crampton, Ont. 6-7

One 12 x 12 centre crank engine, 60 h.p.; one centre crank engine with sub-saw, 75 h.p.; one centre crank engine, 30 h.p.; one side crank engine, left hand, 20 h.p.; one 27 h.p. portable engine on wheels, also new portables on wheels or skids 24 to 60 h.p. The Robt. Bell Engine & Thresher Co., Ltd., Seaforth, Ont. 6-11.

For Sale

Sash, door and planing mill machinery. Boilers, engines, motors, pulleys, gears, machine shop and moulding machinery, 8 feet Linderman glue jointer. Full printed list on request to Cargill Limited, Cargill, Ontario. 5-8

For Sale

One 100 H.P. engine, slide valve, in good condition. One 75 H.P. boiler, 75 lbs. steam, good condition. One smoke stack, 36" x 65', good screen on top, all good repair. Kindly give us a price. Box 476, Canada Lumberman, Toronto. 4-7

For Sale

One 40" Inserted Tooth Circular Slab Resaw, sturdy construction. Spare bits and shanks. Condition fair. This machine was used until replaced by a band machine. Just the thing for small mill. Make money out of your slabs. F. Stanley Knight, Meaford, Ontario. 5-8

Description of Engine and Water Heater For Sale by

R. B. HERRON & COMPANY
Tionaga, Ont.

1—Becket Slide Valve Engine 16 x 24
Automatic cut off wheel governor
Four inch intake
Five inch exhaust
Length of base twelve feet
Length over all fifteen feet
Main shaft thirteen feet by seven inches
Complete with fittings, grease cups and lubricators.

1—Exhaust Feed Water Heater
Diameter 24", length 7'
Complete with connections.
Sixty feet of Four Inch Pipe.
Five Elbows Four Inch.
Two Flanges.
Price F.O.B. Car, Tionaga, Ont., $1,300.00.

1—Payette Edger
Complete with front and rear table and rolls
Equipped with two sets of jaws
Floor space 6' 6" by 4'
Over all 7' 8"
Diameter of saw mandrel 3 & 3/16
Pulley 12 x 12
Capacity forty thousand per day.
Price F.O.B. car, Tionaga, Ont., $600.00
7-10

Wickes Gang

GANG: No. 12 Wickes Gang, 40" sash, 15" stroke, steam binder rolls, front and back in two sections, feed and oscillation combined, 1908 model, and has been in use for five years. We furnish with this gang 11 rolls for cants and stock, one filing machine, and 4 sets of saws.

THE PEMBROKE LUMBER CO.,
1t.f. Pembroke, Ont.

Second Hand Machinery

We have over $250,000 worth of used machinery of all kinds for sale. Suitable for mines, quarries, railroads, pulp and lumber mills, etc.

Everything carefully overhauled at our shops before shipped.

Send us your inquiries.

R. T. GILMAN & CO.,
19tf Montreal.

Situations Wanted

WANTED—Position to manufacture lath or pickets by day or thousand. Best of references. Box 597, Sudbury, Ont. 6-9.

Wanted position as sawyer on left hand rig. Long experience on both bands and circular. Prefer a fast rig. Box 495, Canada Lumberman, Toronto. 5-6

SAW MILL ENGINEER wants employment for coming season. Can do all own repairs on engine or boilers. Go anywhere. R. Cornthwaite, 213 Dease St., Fort William, Ontario. 4-7

WANTED—A position by a band sawyer who can satisfy both as to quality as well as quantity of lumber sawn. Recommendation from some of the best firms in Canada. Box 548, Canada Lumberman, Toronto. 7

POSITION WANTED—By lumberman with 20 years' experience, open for engagement as grader and shipper. Hardwoods, (N.H.A.) softwoods, export and domestic. Highest references. Box 447, Canada Lumberman, 119 Board of Trade Bldg., Montreal, Que. 7

RETURNED MAN—Married, 8 years' experience in planing and building work, seeks position as superintendent of small planing mill. Thorough knowledge of lumber also woodworking machinery. Can take detail from blueprints. State full particulars in first letter. Box 547, Canada Lumberman, Toronto. 7

Energetic young man, twenty-one, desires a position with firm in lumber or woodworking industry. My paramount object is for anything in my employer's interests. Would want position where I would have some correspondence to handle or where would be able to work in soon. Have four years' experience in millwork. Always make good use of my spare time. Good references. Box 542, Canada Lumberman, Toronto. 7

Man with 12 years' experience in the Quebec lumber and pulpwood business, speaking both languages, wishes position as superintendent in a better location for a company doing business in pulpwood or lumber. Has thorough knowledge of office work and is competent to take charge of any operation. At present manager of an American company on North Shore, but wishes to make a change. Address replies or enquiries to Box 512, Canada Lumberman, Toronto, Ont. 5-t.f.

Situations Vacant

WANTED—Sawyer for right hand single cut band saw; setter accustomed to steam set works; doggers, gang sawyer and edgermen. Apply Graves, Bigwood & Co., Byng Inlet, Ontario. 7-8

WANTED—An experienced circular saw filer. Must be capable of doing hammering. Apply to R. B. Herron, 76 Westmount Ave., Toronto. 7

WANTED—Engineer, circular filer, blacksmith, and sawyer for season's cut commencing in April. Box 504 Canada Lumberman. 5-tf.

WANTED—One first class band sawfiler for a double cut mill, cutting all white pine stock. Apply to Box 475, Canada Lumberman, Toronto. 4-7

WANTED—A competent man to grade lumber. Must be thoroughly conversant with National Hardwood Association rules. Apply P.O. Box 632, Magog, Que. 6-7.

WANTED

Sawmill men, filer, sawyer, setter, lath sawyer, edger and trimmer men. Apply Box 491, Canada Lumberman, Toronto. 4-9

WANTED—Live commission men to sell coast stocks throughout the Eastern and Prairie Provinces. Liberal commission to those who can obtain the price. Box 540, Canada Lumberman, Toronto. 7-10

WANTED

Live man to take charge of lumber and cooperage mills in Ontario, one preferred who could take third or half interest. Box 508, Canada Lumberman, Toronto. 5-8

SAWYER WANTED for first class circular mill. Heavy friction feed cut. One and quarter to one and half million feet. Automatic filing equipment. Good board and accommodation. Mills, Bessemer, Ont. Apply W. F. Hamlyn, Hermon, Ont. 7

WANTED—Experienced lath mill foreman for large lath mill. Six machines. When applying state age, experience, firms employed with, salary expected, and when available. Enclose references. Apply Box 531, Canada Lumberman, Toronto. 7-8

WANTED—Experienced sawmill men. Two right hand band sawyers, one left hand band sawyer, also setters, edgermen, trimmermen, lumber pilers, graders and lumber handlers.

The Pas Lumber Co., Limited, The Pas, Man. (Formerly Prince Albert Lumber Co., Ltd., and Ladder Lake Lumber Co., Ltd.) 6-8.

Representative Wanted

WANTED—By old established Vancouver wholesale and manufacturing concern a live commission salesman to represent us in Ontario. Would put up limited monthly guarantee to right party. We are well-known to the dealers in Ontario and must have someone who thoroughly understands British Columbia lumber and shingles, and who is acquainted with Ontario trade. Address, Canada Lumberman, Box 100, 212 Winch Building, Vancouver. 7

Veneer Foreman Wanted

We require a man who can veneer true to size and closed or tight, no matching required, just plain rotary work on basswood. One who can handle operators (unskilled) on 15 machines in Province of Quebec. If you can cover this job, and are interested in progressive manufacturing, apply stating age, nationality, experience and salary desired to Box 533, Canada Lumberman, Toronto. 7

WANTED—An experienced saw mill foreman for a two band and gang mill in Algoma district. Must be an expert mechanic and have good executive ability, able to get best results in quantity and cost of manufacture. When applying state age, number of years' experience, types of mills and firms engaged with. State salary expected and when could take charge. Enclose references. Box 530, Canada Lumberman, Toronto. 7-8

Business Chances

Tug Wanted

Wanted to purchase a small steam warping tug, commonly called "Alligator." Send full particulars, stating price, to U. O. I. Co., 194 Middle St., Ottawa, Ont. 7-8

PORTABLE SHED 125' x 60' FOR SALE

Located at Toronto, one aeroplane hangar in excellent condition. Cost $9,000. Heavy overhead roof supports are readily dismantled for shipment. **Can be purchased and re-erected for ½ the cost of a new and inferior building.** Box 537, Canada Lumberman, Toronto. 7

Wanted

Wood working industries for the Town of Massey, Ont. 1,000 population. Gravity water system. Situate junction of Sable and Spanish Rivers. On C. P. R. Soo line 58 miles west of Sudbury. Unlimited Raw Material for Box Lumber, Veneer and Hardwood Workings. Telegraph and local and long distance telephone service. Four passenger trains daily. Ideal building sites. Unlimited water power awaiting development. Three water powers within the town limits.

Interested parties communicate with Board of Trade for further information regarding concessions on taxations, water supply and building sites.

A. A. HALLETT,
4-7 Sec'y. Board of Trade.

Lumber Property For Sale

About 8,000 acres (held in fee) of lumber lands estimated to contain about 30,000,000 sp. feet of merchantable soft wood.

As a pulp wood proposition, this property should contain 60,000 cords or more.

Included with the lands, is a saw mill, equipped with Dutch furnaces, Waterous edger, planer and lath machine, and situated along the line of the C. N. Railway, the port lies within three miles of the mill, so that water shipments may be made as well as rail.

All the lands are within easy distance of the river, and stream driving does not exceed a distance of more than six miles.

For further information apply to

E. A. SMITH,
23t.f. Shediac, N. B.

Sale of Lands

Under the instructions from The Honorable the Secretary of State for Canada, the Custodian of Alien Enemy property, there will be offered for sale by public auction, by Mr. G. R. Duncan, Auctioneer, at the Council Chamber in the City Hall, in the City of Fort William, in the District of Thunder Bay, in the Province of Ontario, on Monday the fourth day of April, 1921, at eleven o'clock in the forenoon, a large number of parcels of land, said to contain in all about 17,000 acres, and situate in the Townships of Blake, Crooks and Pardee, in the Municipality of Neebing, in the said District of Thunder Bay. Each parcel of land will be put up for sale separately.

The lands are said to be valuable for the timber thereon and for mining and agricultural purposes.

The lands were formerly owned by alien enemies, but are now vested in the Custodian by virtue of The Treaty of Peace (Germany) Order of 1920.

Each parcel will be offered for sale subject to a reserve bid.

The highest or any tender will not necessarily be accepted.

Terms: Ten per cent. cash at time of sale and balance within thirty days.

A list of the lands and acreages, with terms and conditions of sale, may be seen at the office of the under-named Solicitor, and the above named Auctioneer, and at the office of the Deputy Custodian, Ottawa.

W. F. LANGWORTHY,
Port Arthur.
Solicitor for the Custodian.
Dated March 3rd, 1921.
6-7

Miscellaneous

"When you have any transit cars and cannot find a home for them, ship them to us. We will unload, store, insure and reload them when you desire, at reasonable charges. Write for full particulars." The Forest Products Co., Canton, Ohio. 6-9

Wanted

Good second-hand roller bolster wagon, capacity of 4 tons. Must be in good condition. O. A. Rice Co., Welland, Ont. 7

Sale of Timber

Tenders addressed to the undersigned will be received for the purchase of approximately 531 M. fbm. timber and 518 poles up to noon **April 4th, 1921.**

All of the timber was purchased new in the latter part of 1920 and has never been used. Ninety per cent. of the stock is No. 1 Common B. C. Fir of good merchantable quality and the balance is of B. C. or Ontario Hemlock. It is all in the Toronto yards, conveniently located on railway sidings for loading.

Detailed list giving dimensions and further information may be obtained upon application to the undersigned.

The highest or any tender will not necessarily be accepted.

WEDDELL & SAUNDERS,
Engineers & Contractors,
312 McKinnon Bldg.,
March 7/21. Toronto.
6-7

Sale of Red and White Pine

Tenders will be received by the undersigned up to and including Wednesday, the 20th day of April 1921, for the right to cut the Red and White Pine Timber on parts of the townships of Afton and Sheppard, in the Temagami Forest Reserve, in the district of Sudbury, having an area of 22 square miles.

For further information, Maps, etc., apply to the undersigned, or to Mr. J. T. McDougall, Crown Timber Agent, North Bay, Ontario.

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, March 3rd, 1921.

N.B. No unauthorized publication of this Notice will be paid for. 6-8.

Installed Sprinkler System and New Edger

One of the big plants on the Vancouver waterfront, to make some extensive improvements in the winter slack season, has been the Alberta Lumber Co., Ltd. They have recently installed the latest and best in sprinkler systems that the Grinnell Company of Canada could supply, and the management is now enjoying half-rate insurance premiums as a direct result. The mill has been running steadily right through the winter. Just at present a shut-down to add some new machinery is in the company's plans. They are rebuilding the saw carriage entirely, and are in addition putting in a new planer and a Sumner Iron Works Edger, the Canadian Sumner Iron Works plant, in Vancouver having also supplied the material for rebuilding the saw carriage. With these additions and improvements and the necessary overhaul while shut down, the mill will be in better shape than ever to take care of its increasing trade.

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

Review of Current Trade Conditions

Ontario and the East

There is not much change in the general market situation although reports are that conditions are getting better. Retailers, particularly in the country, are doing a little more business than they have for some weeks past. They are not, however, buying to any large extent as yet. During February a number of sorting-up orders were placed and several carloads were disposed of by the mills.

Hauling operations in the bush have been completed, and while the production in most centres will not be nearly as heavy as last year, it is felt that there will be enough lumber cut to satisfy all requirements during 1921 unless there should be a particularly sudden and strong demand.. Good driving conditions are looked for on the streams and rivers.

When the sawmills resume operation at the end of this month or the beginning of next, it is expected there will be a considerable reduction in mill labor. One lumberman stated that he thought about $3.00 would be the average pay, while the figure last year ran from $4.00 to $4.50 and even $5.00.

One question which looms up prominently is that concerning prices. One reason given as to why orders are not being placed readily at present is that rumors have reached the east of a probable reduction of 10 to 15 cents per hundred in freight rates, and it may be that some would-be buyers are holding off in anticipation of a drop. At any rate the report is heard on all sides that freight rates are likely to come down in the near future, and it is hoped that the rumor is correct. Even Hon. F. B. Carvell, chairman of the Board of Railway Commissioners of Canada, has come out flat-footed against the present excessive freight charges. In an address delivered recently before the Rotary Club in Ottawa, he stated that the McAdoo award was one of the most iniquitous pieces of legislation ever foisted upon the people of the United States, and, unfortunately, it was also foisted upon the people of Canada by the Canadian Railway Commission. He believed a scheme could be worked out by which the railways could be brought back to normal conditions, and assured his hearers that the railway Commissioners would find much greater pleasure in reducing rates than in increasing them.

The figure at which some lumber is being sold in the east is much lower to-day than the cost of production, and it does not look as if prices will drop to any greater extent than they have during the past few months. Unless all signs fail, wholesalers and others believe the trend will be in the other direction.

Some concerns report a fair business, during the past few days, and one firm sold 16 carloads in one day recently, which is the biggest business on any day for several months. There is no doubt that trade is picking up slowly but not as rapidly as many would like to see it. It is noticeable that while no one will openly declare that business is booming, everything seems to point to gradual improvement as each week passes, and there is no doubt the second half of 1921 will be more satisfactory in results and see a much larger turn-over in forest products than the first six months of the year.

White pine has been holding pretty well in price during the past few months although there was a slight reduction on 1 in. and 2 in. mill run during the past week. No. 1, 2 and 3 mill culls have also taken a drop of two or three dollars. As for hemlock, some low prices are being reported, and conditions are so unsettled that it is almost impossible to tell what are the actual quotations. A few carloads have been sold and retailers report a fair demand.

Considerable Michigan and Wisconsin hemlock has been coming in of late and competing with Ontario hemlock, being disposed of to the retail yards at the same price and, in some instances, a dollar or two less. There is a freight rate of 29c. which enables the product to be laid down in Toronto at considerably less than $40.00. The hemlock sold is known as "No. 2" and is carefully sized. Those wholesalers, who have been handling it, claim that it answers admirably the purpose for which they desire it. At any rate the Wisconsin hemlock seems to have had quite a boom of late in Toronto and other points, as several men have bought large quantities.

In regard to the general building situation, it is somewhat difficult to size up conditions at the present juncture. Architects have a large amount of work on their boards but just how many of the proposed structures will materialize, it is impossible to state. In Toronto during the past month, the record of new homes was nearly three times what it was for the corresponding month in 1920. The average reduction in the cost of each dwelling is about $400.00 and the average expenditure per house runs from $4,000 to $5,000. There are practically no rows of attached houses being built and fewer semi-detached than ever before.

United States

With the advent of spring and the resumption of building operations there is some increase in the demand for lumber reported at different centres. The trend of trade is upward and while the movement has not become accelerated by any means, it is hopeful in tone. Inquiries are coming in more freely and some of these are resulting in business. The outlook is better and sellers show a little more firmness especially in hardwoods, the demand for which is quickening owing to resumption of furniture and other wood-consuming plants, including box factories. The price for No. 1 common and lower grades of hardwood are still low and an actual shortage in some of the higher grades is reported.

There is still labor trouble at some points and a recent report from Chicago states that building employees are holding out for the old wage scale of one dollar and a quarter while the bosses have offered one dollar and announced their decision to pay no more. A deadlock may ensue which will result in the abandoning of many structural plans for spring. In southern pine the market shows no change. From the oil fields of the southwestern territory it is announced there is considerable activity and a fair amount of construction.

Word received from Buffalo is to the effect that the hardwood trade is still quiet in that market and many firms do not show much sign of an early improvement. There are a number of house plans being figured upon and it would appear that some building is on the programme.

The transcontinental lines have announced a lowering of rates on the lumber schedule, but the western mill men are not satisfied that the reduction is enough to enable them to regain lost markets. The roads, however, are determined to make a trial of the new rates before they consent to any further reductions.

But even with lower freight rates which will make it possible to deliver lumber for less money, and even if other building materials and wages come down, there will still be less than normal building while money is so hard to get at reasonable rates. To a great extent, the present system of taxation on incomes is responsible for tight money. Investors will not consider mortgages while they can make considerable more money by investing in tax-exempt securities.

Speaking of the structural situation an eastern firm says they do not believe that the building material market is yet entirely liquidated or that the lath market will, as predicted, start sliding by the 1st of April. The attempt of certain salesmen to bump the lath market has failed. The industrial situation generally is succinctly reviewed by another authority which declares that stocks of laths on hand are sufficient to supply the market until late in the summer, and adds in a rather mournful strain the following comment: "Until the general situation has been approved, no demand for lumber will develop, no matter how much it costs to produce the stocks on hand."

Great Britain

The depression with which the year opened has not been lifted as yet and in spite of fairly general reductions in quotations, the amount of business which has been done is not on a large scale, states a well known firm. There has been some discussion of late in the matter of the publication of lumber prices and a recent issue of the "Timber Trades Journal" contains some timely comment on the

question in which that publication says:—"All commercial men have realized by this time that when a firm is pressed to sell for financial reasons, no considerations about damaging the market or hurting others have much weight. A short time ago many protests were made against the practice of advertising goods, and at the same time publishing the prices that would be accepted; but the custom has become so common that it is useless to fight against it. One of the evils of trade now is the number of small firms who started business in the speculative times through which we have recently passed, and who have not sufficient capital to weather the storm. There must necessarily be a weeding out process, and when this has been completed the timber trade and all others will be conducted on more normal lines. While prices are so uncertain, we doubt whether the publication even of details does much harm. There are no regular market values, and every transaction of any magnitude is a matter of negotiation. Naturally, old-established firms feel that the market position has been mismanaged, and state that the fall in values has been premature, but facts are now being faced with the knowledge that financial ability will tell in the long run."

In London many importers are in the fortunate position of having sold at least half their goods on the quays at good prices, but, of course, they cannot obtain payment until the landing return is received from the docks. It was a refreshing sight to notice men carrying two 3 x 7 of fair lengths in place of the one which has been in vogue for several years. From a rough survey of the position, it will take at least three months before the quays are cleared, so that there is no need to hurry in entering into contracts for fresh goods when there is already enough (and to spare) to go round for some time yet. It was also noticeable at the docks the number of sawn laths and poles newly arrived, which tends to show that some firms are confident of the demand for these particular articles in the future.

In mahogany and hardwoods a slightly increased movement of business is reported in some directions, principally in retail quarters of the trade, but generally the position continues in much about the same condition as of late. The consumption in regard to all descriptions of hardwoods is negligible, buyers appearing to be altogether apathetic in regard to speculating or purchasing in any way, and the month ends with a turnover of business that will probably show but little increase on that of the preceding one.

Regarding values, the market is yet a long way from what might be termed "settled conditions." The existing disparity between quotations does not conduce to stability. The fact that some merchants who are overstocked with certain grades of timber are anxious to dispose of their holdings at considerably less than the goods actually cost them is no criterion to gauge market values. Other merchants who have small stocks are content to wait events rather than to sacrifice their goods at ridiculously low figures. On the other hand, some American shippers are quoting prices which, on paper, seem very low, but the fact that these goods are still on the other side, and have to come forward—and it may be many months before the timber actually arrives here—makes the position of the market extremely uncertain. Everyone is still of the opinion that prices will eventually rise as soon as the demand becomes general, but there are still no signs of any volume of orders being placed either from stock or for future delivery.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

St. John Reports Producing Costs as Very High

The last month has been another of those liquidating periods and waiting for the return of business months, which process has been going on for some time. Both the American and the English markets are dormant, seemingly waiting for a general shake-up of some kind.

We certainly must be nearing the end of liquidation in lumber and prices at present are below production costs and show nothing but a loss. The demand is about as low as it possibly can be. Only a limited amount of repair work is in process and no new building has yet been started. Many local inquiries as to costs of building have come upon the market during the past few days, but whether any progress will be made towards operations and a real start, remains to be seen. Everyone seems to be waiting to see whether prices will yet go lower. Drastic reductions in building material have taken place during the last month and as yet no benefits have been derived by the manufacturers from these reductions. It does not seem to stimulate business.

The American market, especially the New England market shows but little improvement. All the building trade employees in Boston were recently out on strike. Prices are, at least, ten dollars per M below those of a year ago. Lath are only about one-third of last year's top prices, and shingles at least 25% below 1920 quotations. A general advance in values will, certainly, take place if trade revives, as owners of logs will not manufacture and sell at present rates. Logs have cost more to produce by, at least, $2.00 per M over 1919-20 prices. Production costs of sawing will, no doubt, be less than in 1920 and may lessen the cost of manufacturing by $1.00 per M, but it will still cost $1.00 per M over 1920. Lumber cannot be produced to-day out of ordinary logs paying all charges, at less than $35.00 per M feet, so for every dollar at which lumber is sold below this price, a loss must be made. It must be borne in mind also that the culls and fourth quality must come out of the same log and are always sold at much less than merchantable, many times not bringing the cost of the log. American prices for merchantable quality lumber at St. John would not net over $30.00 per M, which shows a decided loss to the manufacturer, so unless prices and demand improve, it is questionable whether many mills will start sawing or not.

The English market is also dead and no change seems likely in the near future until conditions right themselves in the Mother country, and her foreign neighbours. 3 x 7's were sold lately at about $30.00 net, and narrow stocks at around $25.00, all alongside ship St. John, N.B. This, shows a tremendous loss, and certainly, cannot go on or it will break the finances of the best and strongest lumber manufacturers. There is apparently only one thing to do and that is keep the plants idle until business resumes on a sound, profitable basis.

All logging has been finished for 1921 and the cut certainly shows only about 25% of a year ago. Spring seems to be coming early and it is hoped it may revive buying to some local extent at least. Pulpwood has also broken in price and shipments have been stopped. The box trade shows some revival at lower prices.

Shipments From Quebec Will Not be Large

The lumber trade in Quebec is so absolutely quiet that the least said about it in the present is for the best. The Quebec correspondent of the "Canada Lumberman" in a talk with leading manufacturing and export firms in the city, got the same reply to all inquiries. Business is at standstill, and how long these conditions are likely to remain, is to them a conundrum. They are not, however, pessimistic and have a feeling that a shift is likely to take place sooner or later, but do not expect any immediate change. When such does come, it is stated that it will not be from the United Kingdom markets but from the United States. One thing is significant. No orders have arrived from Great Britain, and the Quebec shippers, contrary to custom at this season of the year, are not looking for ship charters, which goes to show that there will be very little or no shipment of lumber from the port of Quebec at the beginning of navigation.

A member of one of Quebec's leading manufacturing and export firms, who has just returned from a trip to the various business centres of the United States, states the trade is so dull over the border that several adept salesmen with whom he had discussed the situation, said they believed that they had lost the art of selling. The Quebec firms, who had gauged conditions last summer and fall, were warned by business instinct to conduct their manufacturing business this winter on lines of the most rigid economy without any serious injury to their organization, with the result that forty per cent of their usual production was only cut in the woods, and even with their pruning knife at work, their production of logs cost them more money than the preceding year.

The concensus of opinion among the experts in the trade is that present conditions will continue as long as deflation is in course of generation with its labyrinth of uncertainties. The Quebec business houses will not be overstocked this summer as was anticipated. Their advance vision of conditions that led them to take all possible precaution, has been their salvation in this particular regard, and unless a rift in the horizon takes place during the coming summer to warrant a change, they will curtail their production materially next winter.

There is a great need for construction work in the district of Quebec, and the will as well as the capital to proceed, but the general

tendency is to wait for a reduction in the price of labor and material. The building public, like the purchasing public in all phases of business life, as well as with the consumer, have come to be obdurate in their strike against the high cost of living, and until the manufacturers and retail trade make up their minds to accept smaller profits, things will go on from bad to worse.

An effort is being made in Quebec to organize companies for the manufacture of cement, and thus cut the price of that building material, which the building contractors do not hesitate to proclaim is the greatest cause for all their troubles.

The city of New York, suffering from want of sufficient dwellings to relieve the congestion of its increasing population, has under consideration a scheme for relief that might be emulated by the large and populous cities of Canada. That is exemption from taxation of all houses built from now until the first of May 1922, for a period of ten years. Something of this nature will have to be adopted by the municipal government of the city of Quebec, for in the present there is a shortage of no less than 1,500 dwellings to meet the demand of the increase in population. As conditions now exist, no relief can be expected, for the people with capital will not invest their money in building with the present inflated prices of cement and other material, claiming that there is no justification for the excessive demands. Labor and transportation are other important factors that will have to be dealt with. The salaried and middle classes, who heretofore sympathized with labor and saw justice in the organization of their trade unions, are now openly expressing their antagonism, and place labor in the same category as the profiteer.

In regard to railway transportation, it is without exception one of the greatest drawbacks to lumber movement, and the rates on freight must be adjusted by a recall of the McAdoo wage award. As an example of the earning powers of railway labor under present rates of wages, it may be pointed out that a manager of one of Quebec's savings banks informed your correspondent that his bank had among its depositors railway men who were depositing $400 per month in his bank every month since the new wage scale came into effect. It may be added that a freight conductor employed on the Quebec & Lake St. John Railway remarked that his average earnings ever since the new wage scale came into effect were from $18.00 to $25.00 per day. Furthermore, it is stated from a reliable source that a station agent in charge of a small junction station at River du Loup, P.Q., which has to do with two trains daily, one in the early morning and the other at night, clears $6,000 per annum. He works in his vegetable garden all day long, for which he is paid a salary and overtime for attending these two trains.

From inquiries made, your correspondent learns that there is still approximately 100,000,000 feet of the timber stored in New Brunswick that had been purchased during the war by the Imperial Government, and later sold to a syndicate of English importers who only called for a shipment of a few cargoes of the goods during the past winter, that was shipped to the United Kingdom from St. John, N.B.

Montreal Business Does Not Pick up Rapidly

Although most Montreal wholesalers are still optimistic, there is a certain amount of disappointment at the slow manner in which the season has opened. Business has not picked up in the way hoped for. Despite the numerous inquiries, comparatively few orders are being placed, and it would appear as if the inquiries are sent out mainly with a view to test the market.

There is probably too an impression among certain possible buyers that prices have not yet reached the lowest basis, and that by holding off there may be opportunities to purchase at still cheaper levels. The chances are that instead of going lower prices will strengthen, especially if there is anything like a revival in the demand. This is, of course, dependent not only upon construction but upon the many industries which are large users of lumber. At present, manufacturing firms, such as piano companies, which require heavy stocks of hardwood, report that business is quiet, due, to a certain extent, to the number of men unemployed. Prices are by no means stabilized, and there are substantial differences in those quoted on the same specifications.

Practically every section of the lumber market is affected by the dull condition. Travellers state that the yards are not inclined to purchase, and that only immediate requirements are filled.

The outlook in the local building situation is uncertain. Though the permits show a considerable increase, supply houses state that little business has resulted. There are many inquiries, and if anything like a fair proportion of these materialise there will be a satisfactory amount of construction. It is known that two ten storey office buildings are contemplated, besides a very extensive hotel, a rolling mill and a large golf club. In addition many residences will be constructed. Up to the present the men have not shown serious opposition to the cut in wages by contractors. Some men quit, but their places were filled by others at the new prices.

The recent financing in connection with the pulp and paper industry has resulted in some comments upon the position of the industry and of the various lumber and pulp and paper concerns interested. The days of abnormal profits are over, and the industry is now getting down to a more normal basis. Canada, with her large supplies of pulpwood, is in a strong position to supply pulp and paper at favorable prices, and provided that the number of mills is kept within a reasonable limit, there is every prospect of the industry securing a large amount of profitable business.

Some Ottawa Valley Sawmills May Not Operate

Drastic changes in the general situation relative to the lumber market may be looked for at Ottawa, between now and June 1st. Without going far afield or making any speculative guesses, it would not be surprising if some sawmills in the Ottawa Valley did not operate this year. There is also the possibility of some of the woodworking factories shutting down again.

Such indications marked the principal happenings in the Ottawa lumber market during the closing period of March, during which time, prices on the whole remained firm as far as the manufacturers' lists were concerned. There were further rumors of a softening in the price of spruce.

On the whole the market, if anything, was in a more unsettled state than it has been for many months. The outlook, not only as to sales, but to the conducting of mill and factory operations as well, is uncertain. A drop in wages for sawmill labor is almost sure to result before the sawing season opens up. If it does not, some large mills are not going to operate.

Up to March 21st, the indications were, from advance information furnished the "Canada Lumberman," that there was under consideration a cut of twenty per cent in labor costs, which applied to sawmills as well as the majority of factory workers and yard men, the foreman, of course, not being included. The whole tendency of the manufacturers and operators it seemed was to make a general call on labor to bring down manufacturing costs.

"The manufacturers in general see no use in operating if they cannot dispose of their stocks. To do so would be to lose more money than they already have, even at the high prices which have been received for lumber," was the comment of one of the principal operators in the Ottawa Valley.

"The manufacturers have a considerable number of high priced logs yet behind the saw, and unless labor digs in and helps them to get these off the manufacturers' hands and onto the market, there is little chance of operations going ahead. If things and matters in the lumbering industry do not get down to a smooth re-adjustment basis by next fall Canada will witness one of its hardest winters in its history."

The same manufacturer went on to illustrate that during the past year, the lumbermen had seen what was coming months ahead, and had been willing to accept their losses. Now, however, the point of buffeting losses has apparently been reached and some of them are willing to shut down for a season or more rather than operate under present wage scales and conditions. In short they put it up to labor to step in and carry part of the losses they have been called upon to meet for several months past.

Spruce has dropped about ten dollars per M, within the last three months and the base price now is around $45 instead of $55. Pine does not appear to be coming down in price, and for the last two weeks has certainly been holding its own, with very little or no trading being done. Hemlock, and the hardwoods, showing little in the movement of stock, maintain previous prices.

Woods operations during March began to ease off, and the indications for a bountiful supply of logs at the mill ponds is not bright. Hauling has been got over with, but still the logs are not in the water in the number they should have been. A variety of causes is given for their not being there, but woods reports show that they are not on hand.

Rail transportation remained good. Orders were very slow and inquiries came under the same head. Lath and shingle showed little improvement.

It is rumored that factory labor will be reduced from forty to thirty-two cents per hour throughout the Ottawa Valley, counting in the Hawkesbury mills. This will mean that from eighteen hundred to two thousand sawmill hands will be affected.

Building operations at Ottawa during the coming spring and summer are in a doubtful state. Contractors and builders as well as the general public are not keen in undertaking building operations.

This was shown recently by the attitude adopted by the Ottawa Branch of the Association of Canadian Building and Construction Industries, who have notified the Building Trades Council of Ottawa that they will not have any further dealings with that Council as a

Gunns

Gunns Good FOOD

Carefully Selected Meats

We buy only the best we can find "on the hoof," and the best is none too good for our customers in the lumber camps.

What are your requiremtns in the following:

Beef, Veal, Mutton
Barrelled Beef,
Barrelled Pork,
Dry Salt Meats,
Butter, Cheese,
Oleomargarine, Lard,
Eggs, Poultry, Headcheese,
Canned Meats, Mincemeat,
Pork and Beans
Beans, Sausages.

Gunns' Food gives the camp a good "rep" among lumber jacks.

"Easifirst" Shortening will make many little "extras" that tickle the palate.

body. What the builders propose and say is their position is that the individual trades concerned must deal with the various union crafts embraced in the Council individually, but not collectively. It appears as if the employers are commencing their war against high wages to bring down the cost of building. If they are successful and building gets well under way it means thaht a greater quantity of lumber will be absorbed in the home market this year than for the last five years.

Outside of the labor and building arena which is attracting the most attention, other conditions affecting the market remained as they were during the early part of the month.

How Lumber Situation is Shaping Up

Wherever men do congregate, especially lumbermen, the condition of trade is a live thing for discussion. Many and varied are the opinions that are offered regarding what the remainder of this year will bring forth and to what extent business will revive; how large will be the turn-over and whether values have touched bottom or will they soar above what they now are on the first evidence of a reviving market.

In conversation with one who has given the matter considerable study so far as such competing woods as southern pine, Ontario hemlock, B.C. fir and Wisconsin hemlock are concerned, he stated that it was impossible just at the present time to gauge accurately the situation. On the whole, the volume of business that the Toronto trade had done, particularly those firms which represent Coast and Mountain mills, had been very satisfactory during January and February when the smaller lumber yards bought quite freely. This business was entirely of a sorting nature. March was very quiet, and what the yards in the larger centres will do, it is impossible as yet to state as business will not fully open up until some time in April.

Continuing, the speaker said that he was of the opinion that there would not be a resumption of small buying until the orders placed had been received and some of this stock commenced coming in from the mills. He did not see that this would be much before the middle of May. Business in the larger cities was still in the plan stage and how much of this would materialize in orders, seemed to be largely a matter of speculation. Other commodities are not down in proportion to lumber, and it is believed there will be little reduction in labor costs except that labor itself will be more efficient and help more plentiful.

"With all lines of industry hard hit it is not probable that there will be during this year any appreciable volume of industrial building. If this turns out to be the case it will mean that the rail timber market will probably show continued weakness throughout the year. Other lines will be hurt but not in proportion to timbers.

"There will undoubtedly be more municipal building going on during this year than there was last and this fact may partially offset the slump in industrial work. Home-building will probably present a good average volume when once the wheels commence to turn but its volume is to a large extent dependent upon the financial market which to date shows no sign of easing. Speculative building has as yet received no encouragement worthy of mention from the banks and trust companies and the uncertainty of this feature, together with heavy public investment in the bond markets, and the experience of agricultural districts in marketing their crops of last year, tends to make any attempt to diagnose future conditions more or less a matter of guess work.

"I am essentially optimistic but optimism without a firm basis is of little value when thinking over hard facts. We have at the present, conditions which might, under given circumstances, tend to create a runaway market. On the other hand we have conditions at the present under which, certain premises being granted, protracted depression might be noted.

"The whole situation seems to me so bound up in the question of world finance and economic law that time alone will suffice to provide us with the correct answer. One thing is in our favor and that is that the mental attitude of the buying public is gradually having its confidence restored. This is an important factor and must not be overlooked, but it seems to me that the extent of this improvement, and therefore its importance, is restricted to the improvement which must be noted in economic conditions.

"My own guess is that the next few weeks will be relatively quiet with gradual improvement then as the larger centres begin to show added signs of activity. It is my expectation that some commodities will probably show a decrease from present levels within that time so that we should enjoy average business during the summer with further improvement being noted during the fall. Now as to the market, prices, as in December last, show a spread a mile wide. This situation will undoubtedly continue until a sufficient volume has developed to take some of the cheap stocks off the market," concluded the speaker.

Personal Paragraphs of Interest

G. W. Grier, of G. A. Grier and Sons, Limited, Montreal, has returned from a trip to Bermuda.

S. G. Denman, Canadian representative of the British Government Timber Department, London, is on a business trip to England.

F. T. Cliff, of the B.C. Manufacturing Co., New Westminster, makers of box shooks, was in Toronto and Montreal recently on business.

Among the callers on the Toronto trade during the past few days were O. A. Gignac of Quebec; Alfred S. Gravel of Etchemin Bridge, Que.; E. H. Lemay and W. A. Filion, of Montreal.

George H. Chahoon, Jr., president of the Laurentide Company, Limited, has returned to Grand'Mere, P.Q., after a holiday in the United States, the greater part of which was spent in the South.

F. H. Lamar, who has been secretary of the Western Retail Lumbermen's Association at Winnipeg, is the succesor of Frank L. Nash, of Vancouver, as secretary of the Shingle Agency of British Columbia.

T. E. McKenzie, of Seaman-Kent Co., Limited, Toronto, left recently for Winnipeg, where he will demonstrate the possibilities of hardwood flooring in connection with the building demonstration which is being put on in the city.

Leonard Painter, who has been with the Long-Bell Lumber Co. of Kansas City, Mo., in the advertising department for the past year and a half, has been appointed to the newly-created position of assistant advertising manager. Mr. Painter was also made editor of The Log of Long-Bell, the monthly house publication of that organization.

James Thompson, of the Thompson & Heyland Lumber Co., Toronto, returned recently from an extended trip throughout the Southern States, where he visited a large number of mills and lumbering concerns. The Thompson & Heyland Co. have made arrangements to handle southern pine and southern hardwoods to a large extent in connection with their general lumber and pulpwood business.

C. A. Spencer, of C. A. Spencer, Limited, wholesale lumbermen, Montreal, has had a unique experience with his Willys-Knight car. It was stolen from outside the Engineers' Club, Montreal, on the night of Thursday, March 18th, recovered by the police in a lane, and lost again when the constable went to telephone for a patrol to tow the machine. The sequel was more fortunate in that the car was found again the next day in a lane.

FOR SALE

Wholesale Lumber Business

Owing to the death, recently, of Mr. Jas. G. Cane, the business heretofore carried on by him and Mr. Geo. A. Anderson, as Jas. G. Cane & Co., is hereby offered for sale as a going concern.
The stock on hand consists of White Pine and Norway Lumber and Lath: approximately 4,000,000 ft. of lumber and 1,500,000 pcs. of Lath, piled at the following points: Victoria Harbour, Midland, Peterboro, Callander, Spanish Station, and Pakesley.

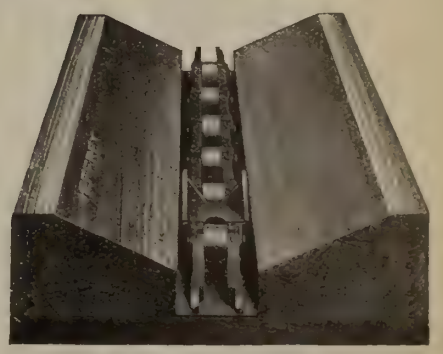

Fig. 9—Log Haul-up made from an extra strong malleable roller chain having steel pins and with renewable spurs riveted to top of the chain.

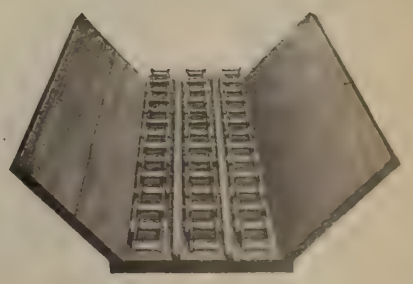

Fig. 10—A series of plain chains in a wide trough makes an excellent conveyer for handling logs from saws to stackers or barkers.

An Active Supporter of Organization

D. H. Andress, Sudbury, Ont.

D. H. Andress, of Sudbury, Ont., who was recently elected a director for the Northern District of the Ontario Retail Lumber Dealers' Association, is widely known in the north as a progressive business man, and has always taken a deep interest in the affairs of the O.R.L.D.A., having served on several of the most important committees. He has been in the building, lumber and milling line since a boy of 18 and for nearly 20 years has been continually engaged in lumbering and milling. He is a member of the Evans Co., Ltd., who operate a busy plant at 59 Lorne St., Sudbury, and whose slogan is "Everything for Builders." The Evans Co., of which Mr. Andress is manager, was organized in 1906 and has worked up a large connection in its varied activities. Mr. Andress is also a member of the Empire Coal & Lumber Co., Sudbury, which was organized in 1909. This concern has a lumber yard, planing mill and coal business in Sudbury. Mr. Andress has been a thorough believer in organization work and is of the opinion that the O.R.L.D.A. is worthy of every support and encouragement for what it has achieved along many lines.

The Doyle Rule and the Lumberman

The mysteries of the Doyle rule for measuring lumber was a topic for discussion in the Ontario legislature recently.

The public is mistaken in thinking that the lumbermen of the province are cheating the province to the extent of the overrun that the Doyle rule permits. As a matter of fact, the lumberman is entitled to all the overrun that is legitimately shown, and that, with small logs, may be considerably in excess of 100 per cent. Six-inch logs, 40 feet long, scale by Doyle 10 feet board measure. Cut to eight-foot sections and again scaled by Doyle, the parts will be found to give an average of 55 feet board measure per log, or an increase of some 400 per cent.

The general principle on which the Doyle measure is based is the squaring of the dimensions of the log after deducting four inches from the diameter. When four inches is taken from a small log the effect on the total is much greater proportionately than with a larger log. During the last 12 years there has been a decline of 35 per cent. in the size of the average pine log in Ontario.

The Doyle rule is hopelessly out of date and the government will have to find some better measurement. The present rule allows for the loss of one-fourth of the log in saw kerf (the slit from which the sawdust has fallen), whereas only one-half that amount is lost by the use of the fine saws used to-day. The rule has remained virtually as it is for 40 years.

In Europe the measuring is according to cubical content, and that system may be adopted here. Forty different rules are in use on this continent, but the international 1-8 rule is regarded by many as being the best. In a test 403 logs were shown by this rule to have 82,920 feet, board measure, as compared with 83,288 feet measured after manufacture, an overrun of only four-tenths of one per cent.

The Doyle rule does not work out even as accurately as the Quebec rule, but the lumbermen bear this in mind when making their tenders, and the prices in Ontario are considerably higher. Here is the way the Doyle, Quebec and International rules work out with 10-foot logs in board feet:

Diameter	Doyle	Quebec	International
6-inch	2.5	10	10
7-inch	5.6	15	15
8-inch	10	20	25
9-inch	16	28	30
10-inch	23	37	40
11-inch	31	42	50
12-inch	40	50	65
13-inch	50	62	75
14-inch	62	75	90

With logs 20 feet long and 14 inches in Diameter, the Doyle rule shows 125 board feet, the Quebec rule 150 and the international 195.

Approximately 200,000,000 feet of lumber will be cut on the crown lands of New Brunswick during the present year, according to estimates of scalers at the Department of Lands and Mines.

Never Use Negative Thoughts in Merchandising

A friend used to sell lumber on the road for a very stern manager. One day in another town, the manager walked square into our salesman friend in the lobby of a hotel, and our friend was visibly "lickered up." The boss glared him through and through with his stern eye, and said: "Looks like you're dead drunk; how about it?" And our friend, rocking on his heels with the load he was carrying, replied with extreme dignity: "I admit nuthin'."

Get that idea, Mr. Merchant. Incorporate it into your philosophy.

Apply it to your publicity and your salesmanship.

Don't deviate from that rule under any circumstances or conditions.

Don't admit anything against your own proposition, in your advertising, or selling talks.

A whole lot of people make the mistake in their advertising of answering calumnies that have been uttered about their goods by competitors. There never was a worse mistake.

The best way on earth to distribute slander is to deny its truth. Admitting that untruths have been uttered is an irremediable mistake.

The real way to rub out a lie is to tell the truth on the subject just as often and as convincingly as possible, but never admit any knowledge of the other thing.

We have in mind a mighty fine firm that advertised in large space that there was no truth in the report that their goods wouldn't last. They simply gave power to a lie about their own product, and probably impressed upon many mentalities that had never heard the false tale, the fact that suspicions had been uttered concerning the quality of this product, and started them off wrong.

If the "other fellow" has been knocking your goods, tell how good your stuff is, but don't in any way refer to him or his story.

Stick to your stuff, its merits, your service, and prove the truth of what you say, and "keep smiling," and keep the negative thought out of all your merchandising efforts.

Giving a man an impression and then immediately trying to erase it, is bad business. You will never get the entire impression rubbed out.—Gulf Coast Lumberman.

Lumber

If I'd got to choose alone
One of all the freights I've known—
All my cargoes live and dead,
Bacon, pigs, and pigs of lead,
Cattle, copra, rice and rails,
Pilgrims, coolies, nitrates, nails,
Lima beans and China tea—
What do you think my pick would be

If I'd got to name the best—
Take just one and leave the rest
Out of all the ports I've known—
Coral beaches white as bone,
All the hot lands and the cold,
Nights of stars and moons like gold,
Tropic smells and Spanish wine,
Whispering palm and singing pine,
All the isles of all the sea—
Where do you think I'd want to be?

Loading lumber long ago
In a ship I used to know,
With the bow ports open wide
In her stained and rusted side,
And the saws a-screaming shrill
At the Steveston lumber-mill
Where the Fraser floods and flows
Green and cold with melting snows
And the tow-boats' wailing din,
As the booms came crawling in,
Fills the echoing creeks with sound,
And there's sawdust all around,
Deep and soft like drifted snow;
Nowhere much a man can go,
Nothing much to see or do,
Mouldiest burg you ever knew.

But I'd give the years between—
All I've done and all I've seen,
All the fooling and the fun,
All the chances lost and won,
All the good times and the bad,
All the memories sweet and sad,
Far and near, by shore and sea,
I would give them all to be
Loading lumber years ago

EDGINGS

The sawmill of E. Veiheneure at St. Victor, Beauce County, Que., was recently destroyed by fire.

The Laurentide Co. of Grand Mere, Que., has had plans prepared for a locker building which will cost several thousand dollars.

The Pioneer Lumber Co. of Lethbridge, recently increased its capital stock from $100,000 to $350,000 by supplementary letters patent.

The ground wood pulp mill at Campbellford has closed down for an indefinite period with a large amount of manufactured product on hand.

R. T. Kemp & Son, of Listowel, Ont., who have conducted a coal and wood business for many years, have also embarked in the retail lumber line.

La Fonderie de Ste-Croix, Limitee, Ste-Croix, P.Q., was incorporated to manufacture and deal in woodworking, mill and pulpwood machinery, with a capital of $20,000.

St. Lambert, Que., is considering an extensive housing scheme to the St. Lambert House Commission. A loan of $100,000 may be made by the Commission to the Freehold Realty Co. of Montreal.

The mill at Upsalquitch, N.B., owned and operated by Read, Smith and Mitton, was destroyed by fire recently. The mill was located on the C.N.R. several miles above Campbellton. The loss is estimated at some $20,000.

The Brown Corporation of La Tuque, Que., are erecting a three-storey clubhouse for their employees. The building is 129 x 100, of stone construction and will have a seating capacity of 460 in the hall which will be equipped as a motion picture place.

A charter has been granted to the Maritime Construction Co., Limited, to carry on the business of general contractors, to erect buildings, deal in building materials and other supplies. The head office of the new organization is in Toronto and the capital stock is $40,000.

Canadian Home Builders, Limited, has been incorporated to carry on the business of builders and dealers in building material, to erect houses, buildings, warehouses, factories, etc. The capital stock of the company is $200,000 and the head office is at Toronto.

Provincial Construction Company, Quebec City, P.Q., have been granted a provincial charter to operate sawmills and manufacture and deal in timber products. Capital $200,000. J. F. Grenson, of Chicoutimi, P.Q., and E. Paradis, of Quebec City, are two of the incorporators.

Eastman Hardwood Lumber Co., Limited, Eastman, P.Q., were recently granted provincial incorporation to manufacture and deal in logs, lumber, pulpwood and other forest products. Capital, $49,0000. Two of the incorporators are J. A. Moquin and W. R. Ewens, both of Eastman, P.Q.

The Fletcher Lumber Co., Limited, Windsor, Ont., was recently granted incorporation to conduct a general lumber business, manufacturing and dealing in lumber, timber, pulpwood and wood materials. Capital, $100,000. Two of the incorporators are J. A. Fletcher and W. J. Fletcher, both of Windsor, Ont.

Mitchell Bros. Co., Limited, with a capital stock of $50,000 and headquarters in Toronto, have been granted a charter to carry on the business as general manufacturers and dealers and to build and operate pulp and paper mills and engage in the manufacture and sale of pulp and paper and the products thereof.

The Reliance Lumber Co. of Saskatoon was recently authorized by supplementary letters patent to increase its capital stock from $100,000 to $300,000. per week. Previous to last year the working schedule was 10 hours daily except Saturday with 9 hours that day; last year there was a reduction to 9 hours daily.

Probate of the will of the late James G. Cane, wholesale lumber merchant of Toronto, has been granted. The amount of the estate consists of $20,803, which is left to the widow and members of the family, and there is also a half interest in the James G. Cane & Co. partnership, the value of which has not yet been ascertained.

The council of Keene, Ontario, has decided to take up the offer of the Ontario Government to supply trees and do the planting work on condition that the township supplies the land. Under this enterprising scheme, the province undertakes to supervise the plantation until maturity and then hand over the timber crop to the municipality.

A contract will shortly be let by the Three Rivers Pulp & Paper Co., Limited, of Montreal, for the erection of a new pulp mill at Three Rivers, Que., which will cost $1,500,000. The Wm. I. Bishop Co., Limited, Montreal, are the general contractors and the structural work will proceed just as soon as the buildings on the site are wrecked.

One of the largest orders for manufactured lumber ever secured in British Columbia was closed recently when the Canadian Overseas Trading Co. signed up to supply an Alexandria firm, which represents the government of Egypt, with twenty-four million feet of railway ties. The first million feet comprising two shiploads, will leave Vancouver in April aboard the Canadian Government steamers.

R. G. Dryden, who operates a planing mill on Pelham St., Toronto, has purchased a suitable location for a lumber yard in Mount Dennis, Ont. The site is north of the Canadian Kodak Company's factory and on the west side of the G. T. R. tracks. He will carry a representative stock of all kinds of lumber in his new yard which will be in charge of James Nash. Mr. Dryden's planing mill and lumber business on Pelham St. will still be continued.

The Canada Overseas Trading Company, of Vancouver, has succeeded in securing an order for 8,000,000 feet of ties for the Egyptian State Railway. Shipment is to be made this month to Alexandria on board steamers of the Canadian Government Merchant Marine. Other large orders are expected to follow. The Canadian Overseas Trading Company is a new and energetic organization composed almost entirely of returned men. Mr. H. Clark, of

London, is president, and is the manager of the European branches at London, Paris, Salonika and Malta. Mr. H. J. Haslett, of Vancouver, is vice-president and manager of the Dominion branches at Montreal and Sydney, N.S.W. Mr. Arthur E. Salisbury is manager at Vancouver.

In connection with the general movement in the lumber industry in New Brunswick for extended hours of labor and reduced wages to meet the new conditions, it is stated that the E. Burtt Lumber Company, who operate mills at Cardigan station on the Gibson branch of the C.P.R. and carry on lumbering operations on the Keswick River, have asked their millmen to accept a cut of 15 per cent. in wages and to return to a schedule of 59 working hours

A proposal that the Province of British Columbia be divided in two is being seriously put forward in Vancouver by residents of the northern part of the province. B. Brynildsen, prominent merchant and business man of Bella Coola, points out that the northern portion of Brtish Columbia has but four representatives in the Legislature out of a House of 47 members, and declares that the north contributes more than half the wealth of the whole province.

In a recent address before the Abitibi Science Club at Iroquois Falls, Ont., W. G. Mitchell delivered an interesting address on the situation of the Scandinavian countries in regard to pulp and paper. He stated that while Sweden, Norway and Finland exported pulp all over the world, the quantity was so small compared with the total amount manufactured in the world as to have little effect on the market. Mr. Mitchell also stated that the industry in these countries was not capable of the same expansion as in Canada.

The annual statement of the Saguenay Pulp & Power Company, into which the outstanding shares of the North American Pulp Company are transferable, shows a decided improvement over the previous year. Gross earnings amounted to $10,488,213 and net to $3,574,925, which, after interest, amounted to $2,532,807. After the placing aside of $608,747 for depreciation, $359,773 for timber reserves and $134,475 for sundry other expenses, the surplus carried forward to profit and loss account amounted to $1,409,812, against $33,651 the preceding year.

The Spanish River Pulp and Paper Mills, Limited, have filed a statement of claim in their suit against Hon. W. R. Riddell and Hon. F. R. Latchford, commissioners conducting the timber probe in the province of Ontario. The Spanish River people say they are always willing to produce documents relevant to the application concerning the right to cut timber on certain areas, but they ask a declaration that the commissioners are purporting to act without proper authority in demanding the list of documents for which they ask, and that the order-in-council creating the timber commission is ultra vires.

W. R. Smith, formerly of the firm of O. & W. R. Smith and Ivan Welsh, who have been running the Royce Ave. Planing Mills, Toronto, have formed a partnership under the name of Smith & Welsh and taken over the premises and storehouse of the Yonge St. Lumber Co., 2219 Yonge St., Toronto, which yards have been closed for some years. Smith & Welsh have stocked and reopened the lumber yard and will eventually move the machinery from their Royce Ave. plant to their new location, where they will then have the planing mill in operation.

Holders of Crown granted timber lands protested to British Columbia cabinet against the announced policy of the department of finance to increase the tax to three per cent. and to re-assess the 1,000,000 acres of Crown grant timber by a new cruise. The present tax is two per cent. J. H. Lawson pointed out that the taxation of timber has been nearly trebled in the last eleven years. "If this three per cent. tax is enforced," said he, "it means the forced cutting and slaughter of our timber resources." E. J. Palmer of the Victoria Lumber Co., Chemainus, declared that the proposal to spend $35,000 to cruise 1,000,000 acres of Crown granted timber in three months was ridiculous and the money might as well be dumped down the bay. He said that it costs his company 30 cents an acre to cruise their lands.

Optimistic exportations with respect to the earnings of the Abitibi Power & Paper Co., Montreal, found complete fulfillment in the statement of the pulp and paper enterprise for the twelve months ending December 31 last, which have just been issued. Net earnings of the period announced, as already forecasted in this paper, are in excess of the $5,000,000 mark, the showing in this regard having been made possible through a heavy increase in the company's sales of pulp and paper products, which aggregated in 1920 $10,580,142, an increase of more than $4,500,000 over the 1919 total, representing a gain of over 75 per cent. The actual figures of $5,043,133 in net earnings were far more than double those of the preceding twelve monthly period when the total reported was $2,125,717 and over three times these for 1918, which stood at $1,643,653.

Before the commission of inquiry, of which Judge Denton of Toronto is chairman, Mrs. Wilda L. Brown of New York on Saturday gave a graphic account of conditions in the north country, and especially in Matheson, in July, 1916, when the latter town was completely wiped out by fire. She said large tracts were ablaze in the vicinity of the town before its destruction. "The trees were falling on both sides of the road and the corduroy road was on fire." Before the town caught fire witness advocated fire-fighting, but her advice was unheeded. She had not previously noticed any fire on the T. & N. O. station property, which the Matheson claimants say spread and caused the damage to the town. Mrs. Brown, sensing the danger, escaped in a canoe which she had ready for the purpose. Fifteen minutes after her escape the town was afire.

The Whalen Pulp & Paper Mills and the Canadian Robert Dollar Co. of Vancouver, have arranged a shipping deal of considerable importance. The Dollar Company will handle and sell all the products of the Whalen mills, including pulp, lumber and shingles. This will, no doubt, have a very important bearing upon the future of the pulp and paper industry of the province. Hon. T. W. McGarry, of Toronto, who is president of the Whalen Company, is in British Columbia at the present time, completing the deal, which is regarded as one of great importance. The Canadian Robert Dollar Co. is one of the largest trading and shipping organizations in the world and has established connections in nearly every market. Regular steamship lines are operated from Vancouver to the many markets easily served by the Whalen mills and the output of the latter concern should have a far wider distribution than in the past. It is also stated that the Dollar Company has become financially interested in the Whalen Pulp & Paper organization.

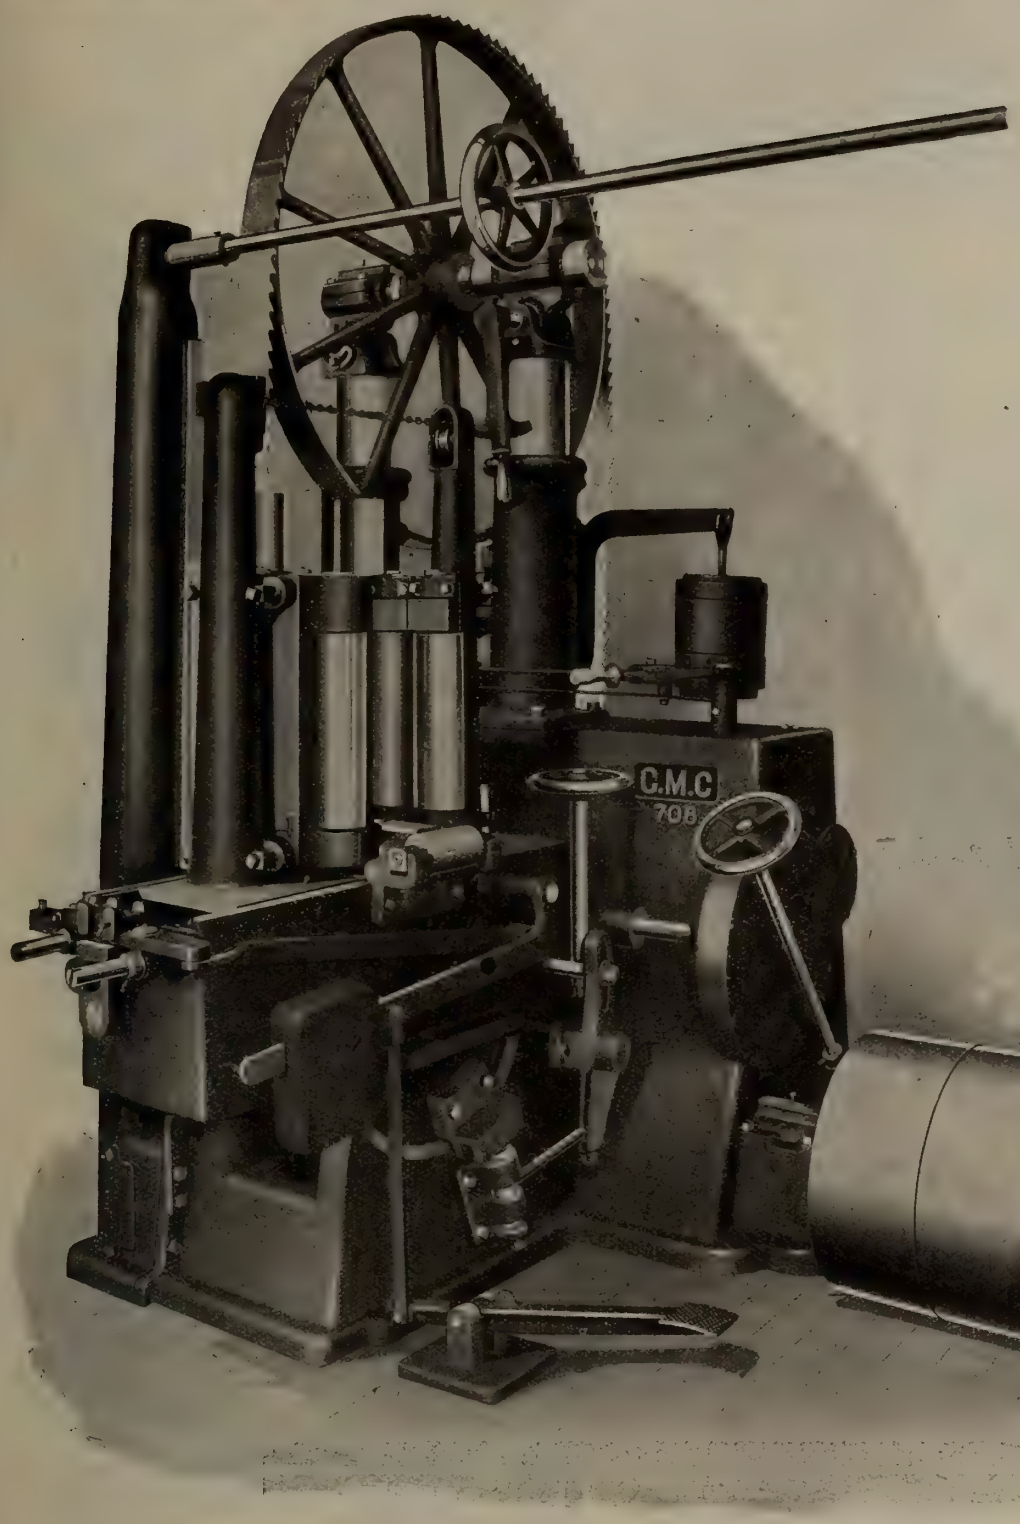
C.M.C.

No. 708, 48" Band Resaw



This machine is intended for general resawing in furniture and box factories, and is especially adapted for sawing short material. It is heavy and rigid, very simple and convenient to operate, all adjustments and controls being within easy reach of the operator.

A feature of great importance on this machine is the fact that the upper wheel is supported between two columns and is not overhung. The columns are fitted to a heavy yoke which is carried on a central adjusting screw making it impossible for the columns to raise unevenly. This construction relieves much of the strain on the frame and insures an evenly balanced wheel and freedom from vibration.

The feed is positive, no frictions being used. It consists of six 4" rolls having six rates of feed and driven by spur and bevel steel gears. The rolls are self-centreing, but may be arranged that one set of rolls will remain rigid while the other set has sufficient flexibility to grip uneven stock. The rolls are close enough from centre to centre to allow stock as short as 6" to be sawn.

Write for full particulars and prices.

Buy Canadian made machines and give employment to Canadian Workmen. Keep Canadian money in this country for the development of Canada. Do not pay a high exchange rate for the privilege of spending your cash abroad for machinery of no better quality than can be obtained at home.

The Marsh Logging Machines Do the Work

This is not a theory—it is a positive fact

This photo shows one of our little Gasoline Skidders and Loaders in actual use in Ontario timber. It will be seen that this machine is all we claim for it, **light compact, easy to move about, yet powerful enough for the work.** Perhaps you have had the idea that the "High Lead" system of skidding is useful only in the tall timbers of the Pacific Coast, where it is possible to get a spar tree a high as 200 feet or more. But this photo shows the "High-Lead" system in actual use with a spar tree of only 25 or 30 feet in height. From this spar tree the hooks are carried out by **one** man to the log, which may be 200 or 300 feet distant, or even farther away. The hooks are then made fast in the end of the log or logs, if two or more small ones are to be brought in. The Gasoline Skidder then hauls the logs in to the spar tree, the forword end of the log being kept off the ground by the pull of the cable. The man usually walks alongside to assist in clearing obstructions. At the spar tree the hooks are changed to the centre of the log, which is then lifted clear of the ground and loaded on the skidway.

This machine does the work of several men, and at much less cost.

Marsh Engineering Works, Limited Established 1846 **Belleville, Ont.**

Sales Agents: MUSSENS LIMITED, Montreal Toronto, Winnipeg, Vancouver

The Three Goodhue Belts

"EXTRA" "STANDARD" "ACME WATERPROOF"

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.

When you buy a belt—buy a Goodhue. Prices and particulars on request.

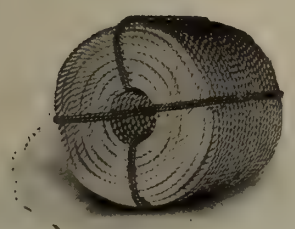
LION BRAND CORDAGE



It is the service you get from Lion Brand Cordage that makes it economical. This service is the result of the knowledge gained during nearly a century engaged in its manufacture. It is the result of carefully selected materials in the hands of skilled workmen. It is the result of a full understanding of the Lumberman's requirements.

The Moreau Barker Does the Work

THERE is never any question as to whether the Moreau Barker can handle the work, be it Winter or Summer.

The logs may be 4 inches or 50 inches in diameter, they may be wet, frozen or dry, the Moreau Barker will handle them swiftly and easily, taking off barks, knots and lumps.

The feeding system used makes it suitable to receive and send the logs to the stockyard or to the car by chain conveyor with very little labor. We have an interesting catalogue which explains these and other features in detail. May we send it?

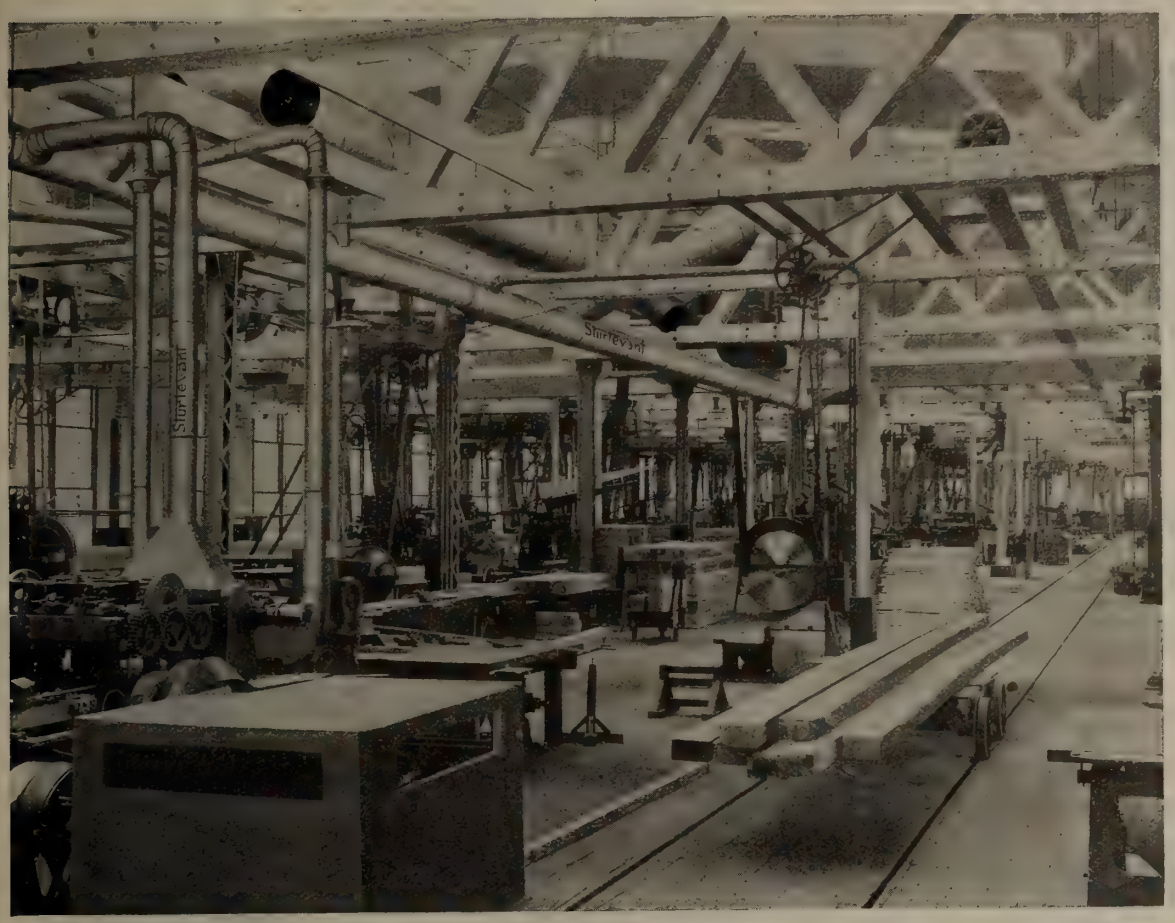
Sturtevant
PUTS AIR TO WORK

Every Day is "Clean-up" Day



The mill in the picture is cleaned of sawdust, shavings, and dirt—every day

Or to be exact, the planers and other woodworking machines, are being cleaned every minute of the working day—EVERY SECOND IN FACT.

Looks as clean as a new pin, doesn't it?

Here is the secret. The owner of this mill installed,

Sturtevant (TRADE MARK)

Planing-Mill Exhausters

You cannot fail to note the result — it shows up even in a picture

The powerful suction of the Sturtevant Exhausters has snapped up the sawdust and shavings the instant they formed at the tool edge, and this refuse has been drawn through the pipes to some distant point for disposal.

By this method all fire risk is eliminated, no dust accumulates in the atmosphere to choke the workers, and production goes on apace.

WRITE TODAY FOR OUR INTERESTING BULLETIN.

DOMINION LIGHT

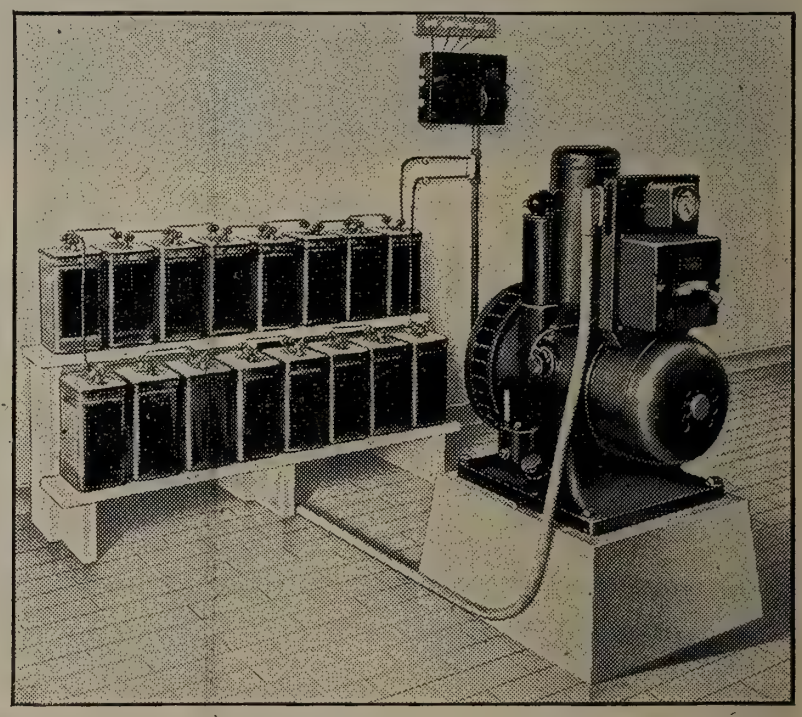
One Way to Lose Your Season's Cut

You can lose your entire season's cut through a fire in your lumber camps. Once fire gets under way, bunk house, cook house, provisions—everything will go. Then in the middle of winter you can't start over again. Your winter's timber is lost and your competitor gets your orders.

The fire danger in every lantern or oil lamp is eliminated by Dominion Light. Add to this the convenience of having all the light you want where you want it and you have a sound business reason for installing Dominion Light.

Dominion Light Plants are a quality product built to a high manufacturing standard and not to a competitive price. This high standard means ability to deliver continuous power at a low upkeep.

Write us for full description and name of nearest dealer.



SPECIFICATIONS

Rating one K.W. (1000 watts) with a continuous overload capacity of 20% or more. Battery of 160 Ampere hours. Air-cooled engine with 3 S.K.F. ball bearings operates on Kerosene. Loads sixty 20-watt lights with engine running or thirty 20-watt lights from battery alone for eight hours.

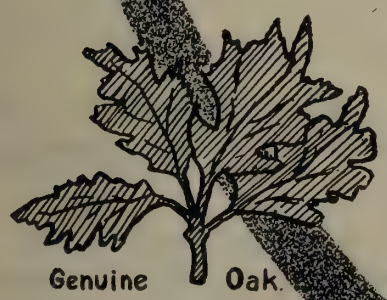
Good Reasons

why you should use

D. K. McLaren's

Genuine British Oak Tanned Leather Belting



D. K. McLaren's Belting won't slip.
It, therefore, saves power.
It won't stretch.
It is most easily handled.
Lasts longest.
Never breaks.
In short, this thoroughly reliable belting ensures continuity of service with minimum loss of power in transmission. Because it is made of the material which has stood the test of generations and it is made by men who know how.

Tudhope-Anderson

Detachable Lumber Trucks

Unequalled stand-up-ability on tough, rough and soft road-beds are the tests that explain the widespread popularity of these sturdy trucks among lumbermen. Cut shows **Front Hauling Gear No. 41** coupled to Hind Gear No. 42. One or more Hind Gears may be attached or detached with ease.

Look at the wide tire steel wheels. They mean easy hauling. We guarantee them. Spokes may be renewed in case of accident—not so with others. Axles are high quality square steel ensuring many years' service. Wood parts are best oak, air-seasoned and kiln-dried. All parts well ironed and braced.

Built to the following specifications:—

No. of Truck	Size of Steel Axle	Tire Inches	Wheels Inches	Frame Length	width
41 Front Gear	1¾" square	4 x ½	26	....	....
42 Hind Gear	1¾" square	4 x ½	42	5 feet	40 inches

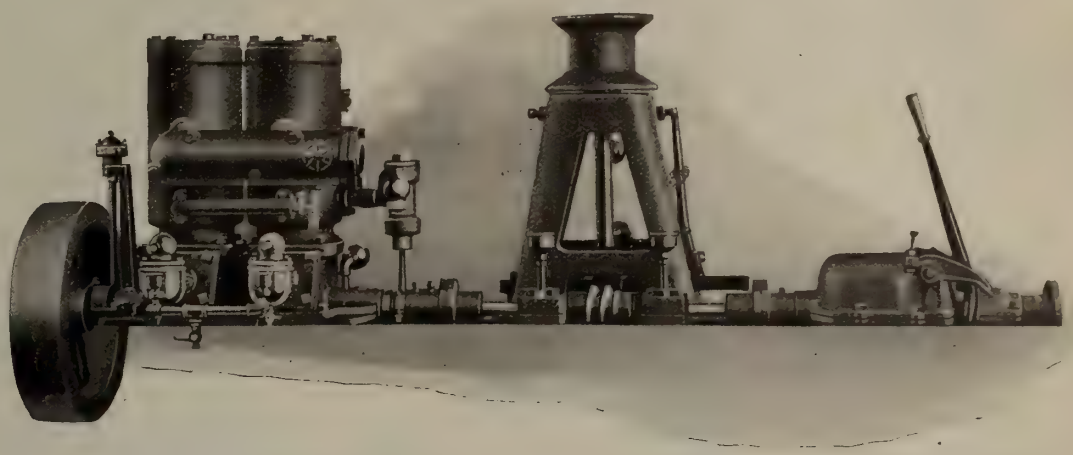
Adams Gasoline Alligator Pointers

Lumbermen find it quicker and easier to work with an Adams Pointer. It is a powerful and efficient gasoline boat that has given satisfaction to the lumber industry throughout the Dominion.

Adams Pointers are made by expert workmen at Penetang. They are easier and safer to use than alligators and tugs. They have a strong, well built, easy running engine and a powerful reverse gear and towing winch that render them equal to the heaviest work, and can be handled by one man.

An Adams Pointer should be included in your equipment. Send for further particulars and blue prints, which will give you full details.



Above cut shows machinery that is installed in a 26'-6" x 6' Special Lumberman's Pointer.

Adams Engine Co., Penetang, Ont.

J. T. PAYETTE, Proprietor

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean, heavy duty work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ⅜ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

I want you to use

Imperial Genuine Babbitt Metal

For Stickers of highest speed, or Engines of heavy weight and

Harris Heavy Pressure

For all other general purpose work about your mills or factories, because in thirty-five years of practice, I have proven them to be

TRUSTWORTHY

Thousands of satisfied users.

You have my word, no better Babbitt is made, and I want you to believe me.

All Jobbers or Our Factories in

TORONTO MONTREAL WINNIPEG and VANCOUVER

will be pleased to fill your orders.

THE CANADA METAL COMPANY, Limited

DISSTON

A survey of the largest and fastest running mills will show that Disston Circular Saws and Band Saws predominate.

Saws made by Disston workmen and Disston Methods stand up to the work and run true to speed.

Each swaging and filing during the entire life of the saw finds the same quality of steel that the saw possesses when new. No matter what your requirements—whether they be for log sawing, factory work, or metal cutting—you'll find a Disston that is exactly right for your particular needs.

HENRY DISSTON & SONS, LIMITED
TORONTO - CANADA
Branch - Vancouver, B.C.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1¾ in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Can You Afford to Ignore Their Economy?

Year after year, in mills all over the world, Waterous equipment has demonstrated a unique capacity for service.

This has been manifest not alone in the quality of product this equipment is producing but in the staunch and lasting resistance they exert against wear.

The steady advance of Waterous equipment into wide popularity, their increasingly secure hold on the preference of mill men, spring directly from this essentially practical cause.

Since the introduction of Waterous equipment, over Three Quarters of a century ago, there has never been a lapse in the Waterous policy, to embody in them the highest possible value.

Against increasing costs of production, by repeated and serious improvement, they have held intact their superior measure of usefulness and worth.

Can you afford any longer to ignore the economy Waterous products insure, or deny yourself a kind of service unapproached in any earlier type of equipment?

Because Waterous products and the sincere service behind them afford uncommon satisfaction, more people use Waterous products than any other kind.

Waterous

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.

West & Peachey - Simcoe, Ont.

Punctuality

Among the virtues upon which business success depends, we find—Punctuality.

It is necessary in modern business that this quality be demanded of workers who sell their time to their employer.

You cannot compel virtues but you can **encourage** them—and Punctuality can be encouraged with the International Time Recorder.

Planing mills, pulp and paper mills, and woodworking plants can increase the day's production by installing a Time Recorder.

Write for Catalogue.

Avoid the Weak Spots!

A chain is only as strong as its weakest link. A horse is only as strong as its harness. You can conserve horsepower and make your working outfit a harmonious, effective whole only by using harness of known and proven quality.

Michigan Lumber and Skidding Harness is made on honor. It is made for use and utility—from the best procurable materials—by skilled Canadian workmen. It is made to stand a big percentage more than the actual strain that can possibly be applied to it.

You will save both time and money by insisting on "Carson Quality."

Write to us for particulars.

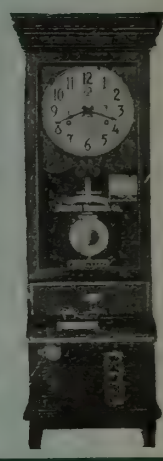
HEAD OFFICE: OTTAWA, ONT.

Accurate Records and Contented Employees



Firms employing from fifteen to fifteen hundred workers, long ago realized the necessity of the automatic system of recording employees' time.

Accuracy is a dominant factor in the successful business of to-day, and it is of vital importance that the actual working time of the individual be recorded.

Continuous "late arrivals" of a number of employees, become a formidable leakage.

Check it now with the International Time Recorder. It pays for itself in a remarkably short time, and keeps everybody "on the job" and content.

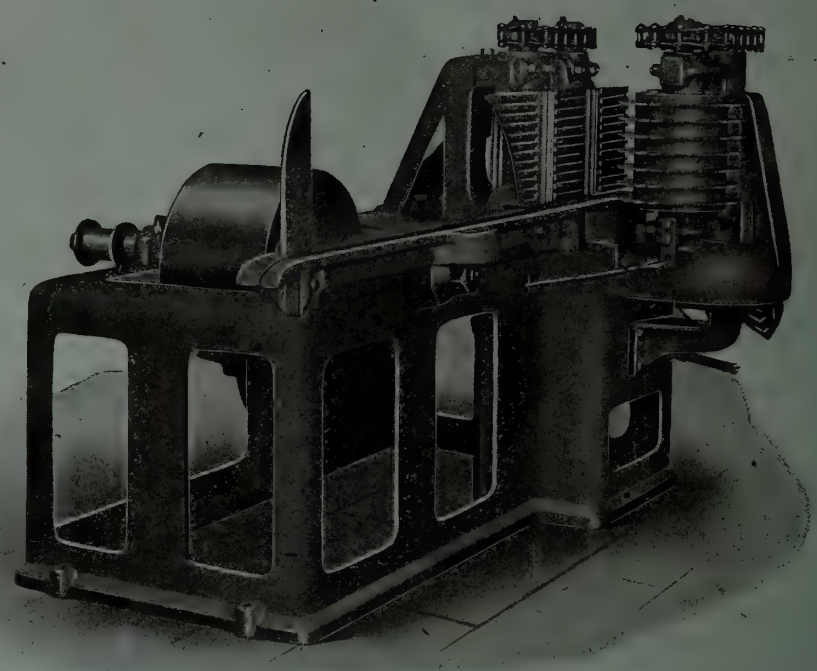
"HAMILTON" CIRCULAR RE-SAWS

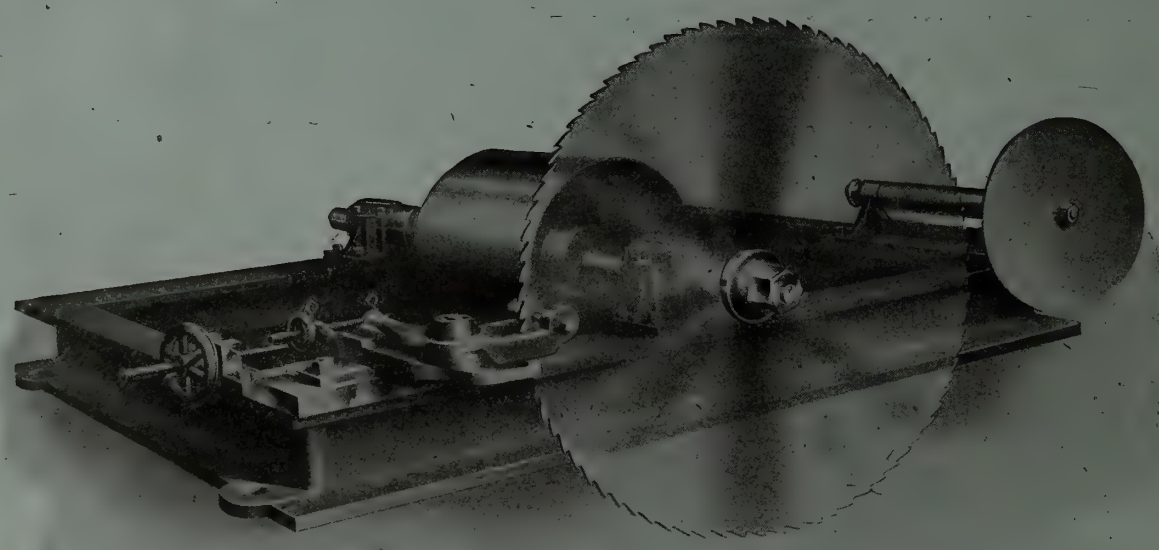


Here is a strong, rigid, well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

Descriptive circular sent upon request.

"HAMILTON" HUSK FRAMES



Made in different sizes to suit all requirements. Frames are all of of cast iron, of heavy section throughout, planed on top and bottom, and mandrel boxes lined with high grade babbitt. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Sawmill Machinery for either Band or Circular Mills.

Bartram & Ball Limited

511 St. Catherine St. W. - Montreal, Que.

We have at Vancouver the following quantities of Fir and Hemlock lumber manufactured by one of the largest and best mills on the Pacific Coast — a concern that enjoys the reputation of turning out the highest grades of lumber shipped from British Columbia.

The whole lot is in excellent shipping condition and can be shipped promptly. We have undertaken to move this stock quickly and we are able to quote prices that will allow us to move it.

If you are interested in Pacific Coast stock it will pay you to hold your orders until you get our prices. This block of stock is offered subject to prior sale; therefore, we would recommend that you wire us your inquiries.

HIGH GRADE HEMLOCK and White Pine Strips

This stock represents strictly high-grade lumber, expertly manufactured and liberally graded. Write or wire, or 'phone, Main 3153 for quotations. Prompt shipment guaranteed.

Our Future Business

—Depends entirely on the service we give you now.

We cannot keep on growing if we look to you for business to-day and someone else tomorrow.

Repeat orders from customers who are pleased with our lumber, is essential to our continued success.

A large percentage of our business to-day is from people who have been buying from us for several years.

We ship you what you buy.

DUNFIELD & CO., Limited

Exporters of Nova Scotia and New Brunswick Lumber

NOVA SCOTIA STRUCTURAL SPRUCE can be bought for less money per unit of strength than any other lumber. We have it in a large variety of sizes at the lowest prices consistent with good quality.

BOX LUMBER of 1920 sawing is pretty well picked up, but we still have considerable Spruce and Pine. This stock we are willing to sell at a very low price if taken in fair sized blocks and moved quickly.

Hardwood

—when you need it

—as quick as you need it

FROM our Logansport, Indiana, Service Yard (near South Bend) we are able to make hardwood delivery in half the time usually required because we have exceptional car facilities.

Our capacity at this yard is 5,000,000 feet—consisting chiefly of Ash, Elm, Maple, Oak, Poplar and Hickory. Delivery of any of these items—all of the highest quality— can be made just as you want them.

And by that we mean that we will fill your order to satisfy you absolutely—you to be the judge of satisfaction.

MORE BUSINESS

Indications are that competition for building and engineering contracts will be very keen during 1291.
Don't let your competitors walk off with the orders before your sales department is even advised of the jobs. You can avoid this by making use of MacLean Building Reports. They tell you of work contemplated in the

Building and Engineering

trades. They will bring you, each day, an up-to-date report on building operations of interest to you, from the time when the project is contemplated until the work is fully completed.
Every MacLean Report is verified. You can concentrate your salesmen on definite prospects.

Write for full information.

QUALITY HUTTON, B. C. *SERVICE*

Long-Bell Forked Leaf Oak Flooring

This Long-Bell Forked Leaf Oak Flooring was photographed just as it came from our factory. It has not been scraped, waxed or varnished. Its beauty, even color and remarkably smooth surface before being laid and finally hand finished is a big selling point.

Another Long-Bell product of exceptional quality is Forked Leaf Oak Flooring, favorably known to the lumber trade for many years. It comes to your yard from our factory as nearly perfect as men and machinery can make it and, in showing Long-Bell Oak Flooring to a customer, you can well call attention to its remarkably smooth surface, requiring when laid, little or no scraping which means quite a saving.

WE INVITE YOUR ENQUIRIES

Mills at Midland, Ont., Thunder Bay, Ont. Head Office :—Midland, Ont.

Nine Good Reasons Why We Should Carry a Portion of Your Fire Insurance

1. Experts are created through specialization. Our underwriting is confined to lumbering operations.
2. Our field men are always at your service to assist you in bettering plant conditions and lowering your insurance cost.
3. We are spending more money in fire prevention work than any other insurance organization in the world, in proportion to volume of business.
4. Our inspections are an important feature of our superior service.
5. All risks must measure up to a high standard morally, physically and financially.
6. Our savings will reduce the cost of your insurance and will protect you from the excess cost of selfish competition.
7. The up-to-date successful business man believes in this form of insurance and we refer you to practically all of the large lumber operators in the United States and Canada, all of whom have our policies.
8. An insurance policy with us is more than an engraved certificate—it is a guarantee that both the spirit and the letter of our agreements will be complied with, and losses are always promptly and fairly adjusted.
9. We offer the last word in fire insurance indemnity, and the "proof of the pudding is in the eating."

PACKARD

"Packards Have Returned Many Times Their Cost"

In the woods, at the mills, and in lumberyards, the work of the Packard Truck has earned it a reputation for dependability and strength.

Whether the job is the hauling of logs or the delivery of finished millwork, the Packard does it surely and quickly, and at lower cost.

For the Gordon Van Tine Lumber Company, of Davenport, Iowa, Packard Trucks work in a model delivery system. They cover Rock Island, Moline, Davenport, and territory on both banks of the Mississippi River. According to the superintendent, Marshall Stewart, these Packards "have returned many times their cost in good service and inexpensive upkeep."

Packard Trucks consistently perform at low cost and with sure dependability. They are powerful and strong. They are expertly rated to the work required of them. They have the advantage of nationwide service facilities established to maintain every Packard as a unit of high earning ability.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $3.00 per year, in advance; other foreign countries embraced in the General Postal Union, $4.00.

Single copies, 20 cents.

"The Canada Lumberman" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Converting Thought Into Action

Building expositions are being held in a number of the largest cities across the border. In these demonstrations the lumberman, the material man and others are greatly concerned. Every effort is being put forward to create a campaign in favor of going ahead with construction at the present time.

Some attractive literature is being issued by various lumber concerns showing artistic and cozy homes. Elevation and floor plans are presented and every page pictures the most alluring phases of domestic life under one's own vine and fig tree. It is thus hoped to stimulate building and create business in several communities. The appeal to the domicile lover is subtle, fascinating and convincing, and as an example here is what one firm says of a home, the best of all investments: "There are no dividends to compare with comfort and contentment—no returns equal to the personal pride felt by the man who owns the home that shelters his family. A vine on a trellis, a cluster of shrubs, a window box of flowers, a little hedge, a tree here and there—all these the planting of your own hands—blend best in a picture of comfort, contentment, character and beauty when the home is built of lumber. It's really a matter of beginning—let your retail lumber dealer help you make the start."

In a plan book, which has just been issued, the following appealing headings appear:—"A Home Promising Comfort," "A Cottage at Moderate Cost," "Charming and Spacious," "A Real Place to Live," "A Beautiful Home at Small Cost." The excellence and special features of the homes are set forth in detail. To show what one community can do, a live progressive town in Kansas recently held a building exposition. Eighteen exhibitors displayed everything that entered into the making of the home. Building and loan agencies, furniture dealers and all the intermediate contributors of the home were represented. It is stated that the retailers were so pleased at the results that they are already considering the proposition of making the exhibition an annual affair.

The lumber merchants who exhibited were much gratified with the interest evinced and one of them showed motion pictures while a prize was given for children writing the best essay on the subject of "Why Build a Home."

The whole exposition was under the auspices of the Chamber of Commerce, and it is declared that dealers in other cities might well emulate the example set by the Missouri town which was a distinct success, and co-operate in a building exposition or demonstration.

It has been declared time and again that the merchant who lacks imagination, possesses no vision and sees only the immediate present, never gets very far on the road to permanent success or expansion. He must be able to visualize business in the days to come, and one of the main objects of building displays and home presentations is in arousing the imagination of the people—stirring hope and ambition and depicting a lovely vista where everyone shall live in happiness, delight and comfort under his own charming and spacious roof. The housewife can see in her mind's eye a sleeping-porch, an inviting breakfast room, a convenient sun parlor, a cozy living room and other artistic features which incite favorable consideration, arrest attention and create interest. If properly presented and rightly followed up, these exhibitions sooner or later translate thought and desire into action which once began in any community, is like the current of a mighty river—gathering strength as it flows.

Arbitrary Labor Regulations Hamper Building

"Employers and workers who are unwilling to face present conditions frankly and courageously are retarding resumption of normal business and working against their own interests. Prevailing wage scales, which under present conditions are of little real advantage to the workers, are an absolute deterrent to the lowered costs which must be established before the prices of commodities can be lowered. High wage rates are purely illusory as long as widespread unemployment or part time work reduces real income and impairs purchasing power."

These statements are made by the National Bank of Commerce, in New York, an organization that is generally sane and thoughtful in its analysis of money and market conditions. It is apparent that this authority lays the blame for much of the present inactivity on prevailing labor conditions, especially the inefficiency and refusal to concede anything in the matter of wages. Speaking of the construction industry, particularly, it points out that although there have been reductions in the price of many building materials, high wage rates and working rules, which make economical employment of labor impossible, together with high freight rates, have prevented material lowering of construction costs. As a rule, building has been restricted almost entirely to absolutely necessary work.

Further analyzing the building situation, the National Bank of Commerce, in its comment, states "A considerable volume of inquiries indicates that there is a potential demand which will make itself felt as soon as and not until costs of labor and material are lowered to what the public regards as reasonable. Meanwhile, the disinclination of labor not only to accept lower wage rates but to give adequate return for wages paid will continue to restrict new housing, thus directly preventing a reduction in rent which, next to food, is the largest single item of the workingman's living expenses."

Hasn't the Bottom Been Reached?

While various uninformed newspaper writers and others continue to refer to the "inflated prices of lumber," lumbermen themselves are confronted with the serious situation of prices which are badly deflated. Prices, in fact, have now got down to such a low point that in many cases the figures quoted do not represent the actual value of the stumpage plus the cost of manufacture, says the "Southern Lumberman." Many of the prices being quoted to-day make the prices paid during the hey-day of high prices seem like a dream. An example of the recessions which have taken place is afforded by the case of a buyer who recently secured the cancellation of an order he had placed only a few months ago, covering several thousand feet, by paying a cash bonus of twenty-five dollars per thousand feet.

Buyers of lumber, along with buyers of practically everything else, have been on strike for several months. The people have not been building houses, they have not been buying furniture and auto-

mobiles, and consequently the sale of lumber has lagged. Just now it is showing some signs of improving. Spring is here; the people are taking on new courage with the budding of the trees and are spending their money a little more freely. Business all over the country appears to be just on the verge of breaking again into its old-time stride. We seem to be on the brink of a real revival of business, a revival which will include the lumber business along with everything else.

But it won't include the lumber business unless the manufacturer of lumber, the men who sell it, can bring themselves to a realization that the lumber they have on hand is a valuable product and one for which there is going to be an active demand sooner or later—a demand which is not going to be hurried any by making bargain-counter prices. As a matter of fact, in a state of affairs like the present, drastic price reductions really do more harm than good. They are likely to give the buyer the impression that the bottom has not yet been reached and make him postpone still further the purchases he was about to make. Here and there the cut price may lead to an order; but oftener than not it merely has the effect of keeping the buyer out of the market a little longer.

The lumber manufacturers have been waiting now a long time for a revival of business. They have been dragging bottom for months. There are now distinct signs of improvement on the horizon. A few months ago the lumber salesman on the road was merely a tourist. He received little or no encouragement—much less orders—wherever he went. To-day the tone of the market is distinctly better. Any lumber salesman will tell you so. Purchasing agents are inquiring for lists of stock; they are frequently asking salesmen to call again at some definite time to figure on some definite bill of lumber. The outlook is good. But the outlook won't continue good unless the manufacturers see the folly of cutting their prices further.

Isn't it about time to call a halt in the price-slashing wave? Haven't prices about reached a point where it is difficult for the producer to make any money? The more prices are reduced now, the more they will have to be raised later on if they are to be brought back to a profit-making level; so every cut to-day means additional trouble later on. Then, too, consideration should be given to the moral effect on the market. If a prospective buyer receives even two or three very low offers, he uses those offers in a natural effort to establish the market at that level; and every salesman who calls on him is bullied with the citation of those bargain prices. "I'll give you the business if you'll meet these prices" is a familiar story to the lumber salesman to-day. Don't give the buyer such ammunition to use in breaking down your market. Stiffen your back-bone; you know what it cost you to produce your lumber; don't offer to give it away in a vain effort to stimulate the demand. The demand was never stimulated by any such methods, and you know it. Have the courage of your convictions. Establish a selling price on your stock which represents its cost, plus a reasonable profit, and stick to it. That's the best way to hasten a return of normal conditions in the lumber market.

Gathering Wisdom from the Complex

In the month of April attention naturally is directed to the building situation and the outlook for structural activity during the coming year. April is generally the pivotal point and, upon the permits issued during the month, some indication may be gained of the extent to which operations will be carried on during the summer season. As lumbermen analyze the trend of prices of wood products and the market outlook, they differ widely in their viewpoints and conclusions. Much depends upon the temperament and disposition of the speaker, the stock he has on hand, the class of customers he caters to, his financial standing and the success of his operations during the past year. In a similar sense it is difficult to find two exponents of the building trades, who take identical views regarding the present status and prospects of construction. The situation is much complicated and there are many currents and cross-currents.

One authority declares that building to-day is restricted by three main factors—the high cost of capital, labor and materials, and until these three factors are reduced to the point of investment value, there cannot and will not be any building done.

The necessity of reducing wages is emphasized, and it is asserted that, when all costs are down and building becomes a safe and sound investment, then money will be immediately available because capital investment will be safe from future depreciation. Some blame the present high cost of money and the extractions of the loan companies for the comparative quietness in the structural arena, and still others declare that the onus should be laid at the door of the lumberman. Others censure landlords, housing commissions, building by-laws, civic regulations and such like restrictions. Out of this conglomerate collection it is difficult to present a clear and impartial view of the situation. Many architects declare there is a great deal of work on the boards and that everything goes ahead until tenders are called for. When the figures are received, the estimates in each case are so much exceeded that the promoters defer construction until some more convenient economical time.

It is interesting to hear the mental survey of men more or less closely associated with the industry; their views are as variegated as human nature itself. One man declares that the great majority of building materials has not yet struck bottom, and although prices are dropping each week, that steel, cement, stone, brick, tile and glass will have to take a big tumble. Another authority asserts that certain items in hardwoods and in the upper grades of finished lumber are out of all proportion to the other grades and must come down. He believed that rough construction lumber was at bottom prices and was being sold to-day at less cost than it could be manufactured at the mills.

An architect, who has a great deal of work in hand, said "Costs are too high to make much building out of the question this year. While labor is somewhat more efficient, yet it will simply have to get to work and produce more. It is not doing enough." He went on to state that this talk of a building boom will only cause labor to make fresh demands and result in lower production, and that to speak of a return to normal conditions so soon after a world war, was utter folly. He expressed the thought that conditions would not become normal for several years yet.

Thus many spectres loom up in the building situation. There is the apprehension of labor's attitude, the bogey of still further reductions in the price of material, and industrial depression while other disturbing factors appear to be lack of stabilization in values, the uncertain foreign trade situation, the frequent labor troubles in the Old Land and the remnant of the war cloud which still hovers over Europe. Each interest seems to size up the relative position or combination of circumstances differently and to form any definite conclusions, one must be guided largely by his own thought, judgment and insight. The other fellow cannot help very much in offering a satisfactory solution.

Still the Dreamer Dreameth!

One of the papers in the east has suggested the feasibility of a public lumber yard as a remedy for cheaper construction. The same journal goes on to speak of the large source of timber wealth which the province possesses and intimates that with conditions as they are, it would not be out of place for the Ontario Government to take one of the limits and inaugurate a public operation.

The same medium intimates that there could be no loss in the undertaking, that the output would be sold long before it was available, while the operation of the limit would, if nothing else, act as a corrective to the prices of the "lumber kings."

The suggestion is one that is capable of considerable expansion. There is no limit to the pleasing picture that may be painted, and logically there is no reason why the same exponent of public ownership should not carry its ideals and theories a little further and come out strongly for the establishment of publicly-owned sawmills, stock yards, bakeries, drug stores, textile factories, candy shops and cafeterias. Then if the field of selection is not wide enough, a provincially-owned newspaper might be launched as an additional inducement to public ownership propaganda.

Splendid Facilities of Windsor Lumber Firm

New Yard and Plant of Piggott Organization Stand for Economical Operation, Increased Efficiency and Practical Lay-out—An Admirable Arrangement

For over half a century the name of "Piggott" has been closely connected with the lumber and woodworking industry of Western Ontario. The history and expansion of the firm need no extended reference as mention has been made in previous issues of the "Canada Lumberman" of the development of the business founded by John Piggott, Sr., in Chatham, in August 1869. The firm prospered to such an extent that it decided to branch out and just twenty-seven years ago this month took over the entire interests of W. G. Nutson, of Windsor. Steady growth has marked both the Chatham and Windsor branches, and a few years ago when Mr. Piggott, Sr., retired to a well-earned rest, he turned over his Windsor interests to his son Walter, and those in Chatham to his son Percy, both of whom are widely-known to the trade.

Under the direction of Walter T. Piggott, the Windsor enterprise has outgrown its old premises, and about a year ago he was forced to look for other quarters. He secured about five acres well located and erected a new plant which has been in operation during the past few weeks. It is well laid out, splendidly equipped and economically operated.

Both Efficiency and Production

Mr. Piggott has endeavored to arrange the different departments so that he can obtain the greatest efficiency in both production and labor with the least possible time and expense. He attributes any measure of success that he has met with in the lumber line to the fact that he has always tried to give the public what they want, when they want it and at the right price.

The commodious planing mill is built of solid brick, 60 feet by 150 feet, two storey high and equipped with the most modern machinery, so arranged that there is very little overlapping in any department. Ninety feet of the ground floor is devoted to the heavy machines used for planing, ripping, detailed mouldings and interior finish. The balance of this floor, sixty feet, is the sash and door department. This is equipped with the best and latest machinery for the purpose and there is turned out any kind of veneered or detailed doors. The light machines are on the upper floor, so arranged down the centre of the building as to leave room around the walls for the benches, cabinet and stair work. This arrangement gives more light for the finer work and at the same time combines the machine and bench work on each operation. All machines are carefully guarded with the latest safety devices, while a three ton elevator between the two floors adds greatly to the efficiency of the plant.

The shaving bin, 14 x 25 x 35, is located outside the factory building proper and is connected to it by a twenty-six inch pipe, one hundred and eighty feet long. This is fed by means of hoods over all machine heads and pipe to the fan, by means of which the shavings are carried to the bin. The plant is equipped with four motors, run by hydro power, and develops one hundred and sixty horse power.

An alley between the lumber piles. It will be noticed that the piles rest on concrete foundations. Mr. Piggott states that his firm have tried all kinds of foundations and the ones they are now using have been found to be the cheapest and most durable. The ground is levelled up and the cement blocks laid in line about 3 feet apart. A plank is put over them and in this way better satisfaction is given than in using wood or any other material. Standing in the foreground is A. J. Pickering, yard superintendent, and on the right J. N. Nickell, accountant.

The new and well-equipped planing mill and factory of Walter T. Piggott Lumber Co., Windsor, Ont.

The machinery is grouped on these motors, while the shafting is so arranged that in the event of a brake in any one motor, the particular shafting run by it can be readily coupled to another.

Adjoining the shaving bin comes, in turn, the boiler room, dry kiln and garage, all fireproof buildings of solid brick with concrete roofs and so arranged on the street line that they are practically unexposed to fire hazard. The boiler room, which is 12x30, has a door leading directly into the shaving bin, through which shavings can be taken for firing purposes. The boiler is also equipped with a feed pipe connected with the main shaving pipe, thus giving a direct feed. In the dry kiln, which is 20x33, is installed the most modern equipment turned out by the National Dry Kiln Co. of Indianapolis, Ind. This equipment provides different means of testing lumber, as well as steaming it thoroughly, thus preventing checking. The garage is built to accommodate seven cars.

Next in line, but separated from these buildings, is the barn, 25x60, of frame construction, built to house ten horses and leave ample room for the necessary harness and fodder accommodation. The well selected sheds and warehouses are ample to house the manufactured products in such manner that it can be readily displayed or conveniently loaded.

Splendid Shed Accommodation

The main shed, a two storey structure, 60x160, is racked off to accommodate a large stock of hardwood flooring, siding, dry kilned material for finish, etc., and is served by a drive way running through the entire length of the building. Adjoining this building is the door warehouse, 20x60, two storeys. This is well lighted and as the different types of doors are kept separately, is very convenient for display purposes. Both these buildings are steam heated, insuring the perfect condition of the contents.

At the opposite end of the main shed is an open shed 30x120, racked off and used for housing different moulding, dressed lumber, etc.

The yards, which are well laid out, are a model of neatness and are served by a private switch from the Essex Terminal Railway. This road was constructed as a connecting link, joining all lines entering the city, thus giving the firm the privilege of shipping over

any of them. The switch enters the yard from the north end and runs to the south end of the factory building, permitting the loading or unloading of material, either to or from the yard, sheds, kiln or factory.

At the southerly or main entrance is situated the office, a two storey building, 34x38, of rug brick, finished throughout and incorporating a display room on the second floor.

It will be readily understood that considerable time is required to properly complete a venture of this size. However, they are

The attractive and commodious office of Walter T. Piggott Lumber Co., Windsor, Ont.

gradually whipping the minor details into shape and firmly believe that when completed they will have a plant second to none in regard to efficiency and neatness.

Mr. Piggott is optimistic regarding business conditions and believes his success, in part, due to his old slogan "Be a Booster."

Piling According to Sizes and Grades

The practice adopted in different lumber yards in connection with the piling of lumber, varies greatly, according to the special circumstances of each case. There are, however, many important points upon which most yard owners agree, and which should be carefully thought out, and applied in the most practical manner in each yard. Take, for instance, the lumber yard in connection with a box factory. Probably nowhere else in the lumber business is there to be found such varied assortment of lengths, widths, thicknesses, and grades of lumber, and nowhere else would it seem to be so important to have the piling carefully planned. There are some box manufacturers in a large way of business who have made a success of their work, and who believe that it is not worth while to pile lumber according to sizes and grades. Perhaps they are right. It will be found in nearly every such case, however, that they have in their employ yard foremen who are much more efficient than the average man who occupies a similar position.

Most manufacturers believe in sorting their lumber into piles according to the grades, widths, lengths and thicknesses, from the very outset, and continue this practice throughout. Of course, it involves a considerable expense to pile in this manner, yet it is a great saving to be able to place one's finger on just exactly the class of lumber that is needed for any particular job and to be able to get it without delay. There are no vexatious delays in tearing down piles to get at the lumber, and then having to pile up again all that has been removed. The location and the layout of the mill and yard, of course, have much to do with the solution of this question. When planning these one should have the mill accessible from all sides. This makes it an easy matter to get at the lumber, and it also reduces the length of the haul from the pile to the saw. It may seem to be a small matter to haul the lumber a few extra yards, but when these extra yards are added together they make quite a long haul in the course of a year. There is moreover, not only the actual cost of hauling to be considered, but the loss of other workmen's time while the lumber is being brought to them.

Again, in planning the location and layout of the mill and yards, one should pay particular attention to the accommodation for dry lumber. As much shed room as possible should be provided, so that one may be independent of the weather. One large manufacturer, speaking of this subject recently, stated that he always carried as large a stock of lumber in the mill as possible, so as to have on hand enough to keep the mill running for a long time ahead without regard to weather conditions. Another manufacturer discussing the subject said that he made a point of having, at least, one month's stock stored in the mill at all times. In piling lumber in the yard, much can be done to save it from the effects of bad weather. By piling the long boards on top, those underneath will be saved from the rain dropping on them. At least, the top boards should be as long as the longest in the pile.

The other side of the case will often be heard from men who have been in business a long time. One manufacturer recently stated that he even found it quite impracticable to pile his stock in grades, lengths, widths and thicknesses. Of course, he takes the general precaution of piling the long boards on top. He is one of those fortunates, however, who has a yard foreman upon whom he can depend absolutely. This is the case more often in small yards than in others, as the necessary economy of space prevents one from erecting a large number of piles. It is safe to say, however, that in most cases the owner of the yard would gladly adopt the system of piling according to sizes and grades, if he had the space in which to do it.

The whole matter comes down finally to a question of the ability of the foreman. In a box factory yard, the foreman is more important than in the ordinary yard. In these yards there is collected together the most varied assortment possible of lumber of all grades and sizes. Unless a man knows where to find every class of stock, he will make the most distressing sort of a muddle of the whole business. He must know what lumber is in each pile, and from experience he must know how to pile the stock, so that even one board of a particular class may be removed, if necessity requires, with the least possible trouble and delay. This means a thorough acquaintance with the requirements of the factory, so that the sizes which are most likely to be in demand may be arranged in the most available places. Taking the whole question into consideration, the general practice is in favor of piling according to sizes and grades and, in doing so to employ, if possible, a foreman with common sense, excellent judgment, and long experience.

Lumber Prices Have Passed Lowest Levels

Paul Sweeny, managing director of United Lumber, Ltd., Fredericton, N.B., returned recently from an extended trip to Montreal, Ottawa, Toronto and Boston, where he visited the lumber trade and investigated the building outlook.

Business, he said, is very quiet everywhere, but it seemed to be concensus of opinion that the lowest lumber prices had been passed. Prices at present are above the bottom and they seem to be more firmly held than at any time since the slump set in last summer.

There is not a great deal of building in sight in any of the cities of Eastern Canada or the United States. The labor situation is unsettled in Montreal, while in Boston a bitter strike in the allied building trades is in progress.

While the housing situation everywhere remains acute, yet there will be little building started until the labor situation is satisfactorily adjusted and until mortgage money gets more plentiful, not cheaper.

Scraper Conveyor for Mechanical Handling

A handsome and illustrated catalogue has just been issued by the Jeffrey Mfg. Co. of Columbus, Ohio., whose Canadian office is in Montreal, featuring the merits, service, uses, etc., of single and double strand standardized Scraper Conveyors. These conveyors are designed to handle all kinds of loose products in manufacturing and mining industries, power plants, retail yards, etc. The booklet contains many pages of instruction, specifications and dimensions, and all the matter is so admirably presented that any purchaser may easily select the right conveyor to fit his needs, saving the time heretofore required in making drawings and layouts, special designs, pattern-making, etc. Mechanical handling is one of the greatest time, labor and cost saving questions to the forefront to-day, and the Scraper Conveyor is an economical and practical application to nearly every industry.

Lumbering Activity in Edmonton District

The lumber industry in the Edmonton district is due for some busy times during the coming year. Practically all the companies operating out of Edmonton and in the near north are calling for men to work in the bush, and in some cases larger crews are being taken on than last year.

The Northwest Lumber Co., which is now logging on extensive timber berths on Lesser Slave Lake, expects to saw 20,000,000 feet of spruce lumber next summer. Its logs are brought by rail to Edmonton and milled there in the largest lumber plant in the province.

D. R. Fraser Co., one of the old established firms, will re-open its mills after a shut-down of six years. Logs will be brought down the Saskatchewan river from berths 105 miles upstream.

Canadians Attend National Lumber Meeting

General Survey of the Industry—Mr. Manbert Thinks Stumping Values Too High in Canada—Mr. McLachlin Elected on Executive—Outlook Brightening

The Twenty-ninth Annual Convention of the National Wholesale Lumber Dealers' Association was held on March 29th and 30th at the New Drake Hotel, Chicago. The gathering was in many respects unique in that it was the first time in the history of a lumber association meeting that a place outside of the congested downtown district has been selected. This time a palatial hotel, located in an exclusive residential district in the north end was the rendezvous.

John W. McClure, the president, presided and delivered an interesting and comprehensive address. In the course of his address he made reference to the future of the lumber market and added:

This is a situation which must right itself in time and even a slight increase in the present demand will be reflected quickly in a greater degree of stability in the market. Fundamental conditions indicate that we are now on the threshold of a change for the better with an upward tendency in demand and a strengthening in values. This process of improvement will undoubtedly be slow and gradual in the beginning, gaining momentum and force as the months go by. We can congratulate ourselves that our feet are on solid ground, that we are safe and sound after the sudden fall which our industry has recently suffered, and that we have a future which holds for us great promise of rich rewards for those who have the faith to look upward and the stamina to push forward.

Reasoning by the analogy of past events, we may risk the prediction that our next annual meeting will find us safely launched on another high tide upon which we may seek safe harbors where our industry may find a rest from the upheavals and depressions which have so greatly disturbed our equilibrium. A steady demand, a well-balanced supply and stabilized conditions of trade with moderate profits would be welcomed by the trade as a relief from the vexatious experiences of the past.

Under the mental stimulus created by war conditions there has developed in many quarters an inclination to try out new theories, to cast aside all that is old regardless of values, and to attempt to discard principles as firmly fixed as the foundations of the world. During the disturbances resulting from this state of mind the legitimate wholesaler, despite the attacks directed toward his place in the business world, has maintained a firm position in the business of distribution and has demonstrated in a most convincing manner that he performs a necessary function and renders a service of indispensable value.

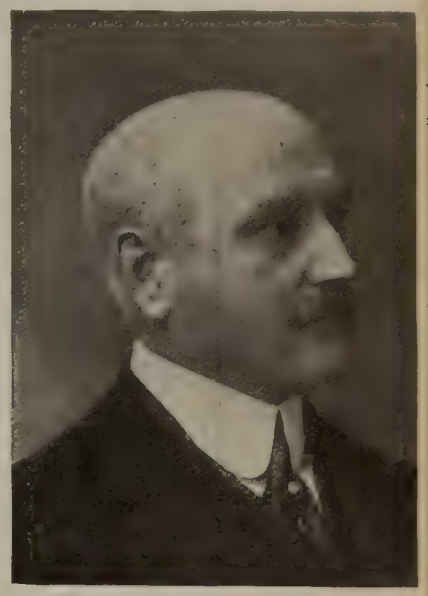
Lumber Prices Do Not Retard Building Activity

After more than two years' hesitation following the close of the war the housing problems of our nation are yet to be solved and upon the solution depends to a very large degree the happiness and prosperity of the American people. Especially is the lumber industry vitally concerned in the progress of readjustment which will meet the requirements of the public mind and release the pent-up demand for homes, for schools and for buildings of almost every character. An example of the readiness with which the public mind is disposed to make a scape-goat of the lumber industry is found in the fact that a year ago the delay in the housing campaign was attributed largely to the high prices of lumber, while to-day, in spite of the heavy declines in mill values of lumber, the building programme still lags because of small proportionate reductions in construction costs which remain far above the point which the public is willing to accept as the new normal mark of safety from an investment standpoint.

This proves that lumber is a much smaller factor in construction costs than is generally believed. The fact that lumber has led the industrial field in meeting readjustment conditions is greatly to the credit of the industry. As soon as the other elements of cost, including labor and other building materials, follow the examples of the lumber industry a long step toward the solution of this vital problem will have been made. It has been said that sections of the retail lumber trade have been slow to take their inventory losses and readjust their prices to a replacement basis. It is extremely doubtful that there are serious grounds for this report, but if there be any degree of truth in the statement, our association, through its friendly relations with retail organizations, might well exert its influences to assist in bringing to the retail branch of the industry a realization of its responsibility in meeting the necessary demands for readjustment to new normal levels and of the futility of contending against the thoroughly aroused public opinion which is in full control of the housing situation.

There were many other interesting features about the convention, and probably the most outstanding was the speech by J. W. O'Leary, vice-president of the Chicago Trust Co., who spoke on the financial outlook. He said that capital is only the difference between production and consumption. It can not be created by fiat, nor in any manner other than by work. If we will produce more than we consume, with the world conditions stabilized we will have all the necessary capital for the legitimate operation and expansion zone. The present is a time neither for over-optimism nor over-pessimism, but a time for real concentration and teamwork. The reports received by our institution from concerns in various lines show a very marked increase in the volume of the business for March as compared with February—nothing phenomenal, but still the curve is upward, which is most encouraging.

D. McLachlin, Arnprior, Ont.
Elected as Trustee



Gordon C. Edwards, Ottawa, Ont.
Retiring Trustee

R. M. Calkins, vice-president of the Chicago, Milwaukee & St. Paul Railway, talked on the railroad situation, and, referring to the rate question, said that in his opinion the reduced rates, which western lines put into effect on April 1st, represent all the decreases that can be made at the present time.

Mr. Manbert on Lumber Survey

The feature of the second day's session was a survey of lumber conditions, and reports were presented from various parts of the country, telling of the state of things in this great industry.

Among those who took part in the discussion and received a warm welcome, was A. C. Manbert of the Canadian General Lumber Co., Toronto, and former chairman of the Wholesale Lumber Dealers' Association. Mr. Manbert described himself as a "voluntarily expatriated Down East Yankee," who had been identified for many years with the lumber industry of central and eastern Canada. Chicago despatches refer appreciatively to Mr. Manbert's ability as a speaker, his keen sense of humor and the entertaining character of his remarks, which enlivened a somewhat dull discussion.

Answering the universal question: "How is business?" Mr. Manbert said:

While general business with us, of course, is not good, I am not sure but that it is better than on this side the line. I am sure that this is true in the lumber business. This may be due to the fact that the United States has deflated faster than we have in Canada. During the war your per capita inflation was greater than ours in Canada and the transition has been more abrupt.

Mr. Manbert said that due to speculation and other causes which he enumerated, stumpage values in Canada were becoming "dangerously high." In answer to a question from the floor as to whether he meant that stumpage is getting too high for profitable production of lumber, he replied that such was his meaning.

Chas. Hill, general manager of the Southern Pine Sales Corporation of New York City, was the next speaker. Speaking facetiously, he said that the environment of wealth and luxury in which he found

himself in this convention conduced to optimism and caused him to feel that perhaps his preconceived ideas as to the lumber industry being in hard lines needed to be revised. He said that he best thing about the next six months in the lumber business is the last six months. He thanked Heaven that that period was passed and "we will not have to plow that field again." He continued as follows, in part:—

It is a great thing though there have been losses by some, the credit structure of the country has stood the strain. It has been my experience in the lumber business that we sell our product upon three bases. First, a basis of profit, and that is the way we like to do business; second, the basis of cost, and that is not so good; third, and that is what we are doing now. We sometimes have to sell upon a purely salvage basis. During the last three or four months we have been disregarding costs and selling lumber on a salvage basis to save the ship. I am convinced that we are going to end that job of salvaging the cargo and saving the ship.

I do not believe that prices of commodities are going back to the 1914 level. It seems to be reasonable, taking all factors into consideration, to believe that a new normal will eventually be established 75 to 100 per cent. above the pre-war level. We have already arrived there in the lumber business. When other elements entering into the building of a house reach the same level it seems to me reasonable to look for a great boom in building.

Dan McLaughlin Elected as Trustee

John W. McClure of Memphis, Tenn., was re-elected president for the coming year; W. H. Schuette of Pittsburg, Pa., vice-president; H. W. McDonough of Boston, second vice-president; E. F. Perry of New York, who is well-known to Canadian lumbermen, resident vice-president; Henry Cape of New York, treasurer, and W. W. Schupner of New York, secretary.

During the past year there were two Canadians on the Board of Trustees, these being A. E. Clark, Toronto, and G. C. Edwards of Ottawa. Mr. Clark's term has not yet expired. Dan. McLachlin of Arnprior (president of the Canadian Lumbermen's Association) was chosen to take the place of Gordon C. Edwards, who voluntarily retired owing to the expiration of his term. Mr. McLachlin will serve until 1924. A. C. Manbert of Toronto was one of the members of the nominating committee.

Invitations were received from New Orleans to hold the next convention in that city, but no action was taken, the selection of the 1922 gathering being left in the hands of the trustees.

The proceedings closed with an elaborate banquet in the ballroom of the New Drake Hotel. The function was of a dignified and elaborate character and was much enjoyed.

Among the Canadians who attended the National Wholesale Lumber Dealers' Association convention were W. E. Bigwood, A. C. Manbert and H. Boultbee, Toronto; W. Gerard Power and Mrs. Power, Quebec; A. C. Morrison, (Price Bros.), Limited, Quebec; S. C. Thompson, (Gatineau Company), Ottawa; J. Barron, (W. C. Edwards & Company), Ottawa; Theodore A. Sparks of Winnipeg, (president of the Western Retail Lumber Dealers' Association); P. D. Gordon, (Mason Gordon & Co.), Montreal, and others.

Historic Quebec Firm Closing Business

Dobell, Beckett & Co., one of the old and most prominent export timber and sawn lumber firms of Quebec, will cease to exist on April 30th, much to the regret of the trade and the public in general familiar with the honorable traditions of the organization which has long held a prominent position in the Canadian timber export industry.

Dobell, Beckett & Co. was founded sixty-five years ago by the late Hon. R. R. Dobell and the late Mr. Thomas Beckett, with branch offices established at Montreal and Ottawa, and agencies in the various business centres of Great Britain. Its annual shipments of timber and sawn lumber from the port of Quebec amounted to hundreds of millions in feet measure, and the house, almost from the beginning of its career, ranked as one of the foremost in connection with the timber and deal trade of the port of Quebec.

The late Hon. R. R. Dobell was the senior member and active head of the enterprise, and to his personal activity and commercial ability the firm owed in a large measure its success and prominence, stability and widespread reputation. In later years Mr. T. Stevenson, Mr. Lorenzo Evans and Mr. Wm. M. Dobell, son of the senior member, were added as partners. In the meantime, the late Mr. R. R. Dobell was chosen by the electors of Quebec West to represent them in the Canadian House of Commons. He was elected as an independent and called upon by Sir Wilfrid Laurier to enter his cabinet as a minister without portfolio. It was in this public office Mr. Dobell soon demonstrated that he was not only a man of astute business capacity, but an honest legislator who was broad in his vision and absolutely independent in his grasp of public questions. He was at the same time a great believer in the future of Canada, and the port of Quebec which he worked to aid in development in order to get it ready for the future shipping trade of the Dominion. At the same time by his cosmopolitan character and open-hearted geniality he was greatly respected and esteemed by the people. His death, which was through an accident and happened in his native city, Liverpool, England, where his father carried on business as a harness maker, was not only a blow to his family and business connections, but more especially the city of Quebec.

Recently Messrs. Wm. M. Dobell and Mr. Lorenzo Evans retired from business when the activities of the firm were continued by Messrs. R. M. Beckett, N. Christensen and W. A. Horne, the last two mentioned taking the place of Messrs. L. Evans and W. M. Dobell, while Mr. Stevenson continued to manage the firm's business in London.

The Quebec lumber trade were given a surprise when it became known some months ago that the present personnel of Dobell, Beckett & Co. were offering their limits for sale, preparatory to winding up their affairs and going out of business.

Every Human Has Something to Sell

By J. C. Dionne

Every human has something to sell.

Whether it be man or woman, boy or girl, child or grown-up.

As we make our way through life we are constantly engaged in the game of "selling" to the rest of the world.

We are all trying to "sell ourselves" to those with whom we come in contact, in the best possible way.

We are trying to sell our stock on the market of human opinion in the most constructive manner.

We all want the "other fellow" to appreciate our best points; to grasp the best possible opinion of us.

Therefore the fundamentals of salesmanship are of interest to all of us.

The average man, and the average woman, ambitious though they may be, and intensely interested in making the best possible impression, whether it be of a business or personal character, does not appreciate the possibilities of the situation from a selling standpoint, and leaves a whole lot to chance.

Whereas the wise man leaves nothing to chance that he can humanly help. Chance may get you something, but it may not be what you are looking for.

The man who takes the most practical view of the thing does two primary things: he takes unbiased inventory to see what he has to sell; and he decides thoughtfully and intelligently what impression he is going to try to create.

He checks up his assets and his liabilities.

He lays his plans for bolstering up his discovered low spots, and intensifying on his high lights.

He decides what he wants the world to think of him; what impression he wants to create; and then he goes out with his selling campaign.

The woman whose family has moved into a new town to reside, does the same thing.

She appreciates the fact that she is going to be appraised and inventoried—critically. Her appearance generally, her clothing, her manner, her manners,—everything—is going to be weighed in the balance.

Therefore a "selling" campaign is valuable to her as it is to her husband who invades a new business circle, and wants to do his best in it.

Remember the selling thought all the time.

Secure attention.

Create interest.

Sustain that interest by some attractive thought, idea, or act.

Make your sale.

Whether you are a new boy in a new neighborhood, approaching for the first time the neighborhood "gang"; a little girl who is invited to "jump ropes" for the first time in the new school she starts attending; the young lady who is making her debut in society; or her father or mother in whatever thing they are trying to accomplish, the fundamentals are the same.

We all have something to sell.

And the more intelligently, and impressively, and interestingly, and enthusiastically we handle the effort, the greater will be the reward .

Advantage of Electrically Driven Sawmills

The size of the Sawmill Plant is Important. It is found That for Small Mills the First Cost of the Electric Power Plant and Motors is Greater Than for a Steam Plant and Belted Drive. For Medium-size Sawmills the First Cost Does Not Differ Greatly When Everything is Considered; and for Large Plants the First Cost May be Less for a Motor driven Than for a Shaft-driven Mill; Says Allan E. Hall, of Milwaukee, Wis., in "Mechanical Engineering"

The complete modern plant for the manufacture of lumber includes everything required to transform the growing tree into finished lumber ready for the builder; and this plant naturally divides into forest equipment and mill equipment. The forest equipment, which includes logging machinery and railroad and water transportation of the logs to the mill, is not considered in the present paper.

The capacity of a sawmill is regularly given in thousands of feet board measure per day of 10 hours. The power required for sawmills alone varies from 4½ to 8 h.p. per 1000 ft. of lumber per day; e.g., a sawmill of 100,000 ft. daily capacity will require from 450 to 800 h.p. The lower figure is for mills cutting small and medium pine logs; the higher figure for Pacific Coast mills working the heaviest timber, or mills sawing hardwood. The planing mill will require from 2 to 3½ h.p. per 1000 ft. on the same basis. The total power for milling is therefore from 6½ to 11½ h.p. per 1000 ft. board measure of lumber sawed per 10 hours.

Two things should be kept in mind in estimating and comparing power used in different sawmills: First, two sawmills rated at 100,000 ft. board measure per day each may deliver this 100,000 ft. in very different forms. The first may be a "board mill" and the entire day's cut may be 1-in. boards. The second may be a "timber" mill" making 50 to 60 per cent. of the logs it handles into timbers of large dimension pieces. It is obvious that one 12-in. by 12-in. by 16-ft. timber will add just as many board feet to the day's tally as 12 boards 1 in. by 12 in. by 16 ft., but the latter will have consumed much more power. Second, it consumes more power to saw hard, dense wood than to saw soft, light wood. Some mills work hardwood or softwood exclusively; others must cut various kinds just as they come, owing to the timber supply being of mixed varieties.

Conditions of the Problem

In deciding whether to drive a sawmill by lineshaft or motors, the first consideration is the probable life of the plant. Unlike most manufacturing plants, the sawmills must nearly always be built close to the supply of raw material; for it is not commercially possible to transport sawlogs far from where they grow, except in the case of valuable timber like mahogany and other tropical hardwoods. When the supply of accessible timber is sawed, the plant must be abandoned or moved with a very small salvage value. Sawmills which have a timber supply in sight to saw for twenty years or more form a small percentage of the total number. The first cost must therefore be kept down to a figure which can be wiped out from the profits in a few years—fifteen, ten, or even eight years—without making too great an annual charge.

The size of the sawmill plant is important. It is found that for very small mills the first cost of the electric power plant and motors is greater than for a steam plant and belted drive. For medium-size sawmills the first cost does not differ greatly when everything is considered; and for large plants the first cost may be less for a motor-driven than for a shaft-driven mill.

Accessory or by-product equipment will affect the choice between the two kinds of power transmission. As previously explained, the planing mill is considered as a part of the complete installation; but beyond this every intelligent lumberman is constantly trying to make the waste wood from his sawmill into useful products. As an example, a large mill recently built for the manufacture of yellow-pine lumber makes from waste wood (a) kiln sticks for spacing lumber in the dry-kiln stacks, (b) lath, (c) rosin-barrel staves, (d) shingles, (e) box boards and cleats, (f) short stove wood, (g) molding strips and (h) ground chips for fuel. Moreover sawmills are built to-day for producing small wood specialties primarily from the log, the output of lumber in the form of boards or other building material being small and incidental. One large plant for instance has recently been built for making oval wood dishes, butter boats and clothes pins. A small sawmill followed by such a re-manufacturing plant is usually motor-driven, while the sawmill alone might not justify the investment; for the small specialty machines can be driven electrically with convenience and economy.

A unique condition of sawmill operation is that fuel costs nothing. The waste wood from the mill contains 8,500 to 9,150 B.t.u. per lb. when dry, the larger values coming from highly resinous wood, although as it falls from the saw it contains from 40 per cent. to 50 per cent. of moisture, or even more. Generally the mill produces more waste wood than can be used for fuel or otherwise, and this surplus must be sent out in a long conveyor trough and burned in a pit or in a closed iron "burner." Decreased fuel consumption by saving power-transmission losses is therefore of no interest to the lumberman. The argument has even been made that decreased fuel consumption under the boilers is poor economy, because the saved wood must be conveyed a longer distance to the "burner" than to the boiler room, thus using more engine power.

In sawmills, as in other industries, motors give the advantage of unit driving, and the whole mill is not dependent on one line shaft or main belt. But it is to be noted that in the sawmill proper this advantage is not so great as in most other manufacturing plants. In a machine shop or other factory where one machine or small group of machines is making a finished product independently of all others, a stoppage of one machine or group will not affect the others. In a single band mill every piece of lumber from the log passes through all the machines serially, and a stoppage of one machine in the chain will soon shut down the mill. In a saw-mill with two log-cutting saws there will be two streams of lumber, and failure of one machine will generally only affect one side. After the lumber passes the trimmer and reaches remanufacturing and by-product machines, the full advantage of unit driving is gained, for here one machine does not depend on another. With the foregoing conditions in mind, a comparison may be made, first as to plant details and cost, and second as to operating expense.

Comparison of Plant Details and Cost

Sawmill boilers are either ordinary horizontal or of water-tube types. When burning sawdust a large furnace is required, which is generally of Dutch-oven design. A fuel-storage house is built close to the boilers, with the fuel conveyors arranged either to discharge sawdust from the mill direct to the furnaces or to carry it on to the storage house and return it when needed. When the belted mill and non-condensing Corliss engine are replaced by the condensing steam turbine and motor-driven mill the steam consumption of the prime movers will be cut about one-half, which allows a reduction of boiler capacity to be considered in comparing the cost of the entire plant. The boiler capacity needed for various auxiliary steam cylinders used in the mill will of course remain the same as before.

The belted sawmill, except in plants too small to be of practical interest, is generally driven by a simple non-condensing Corliss engine. It has not been found worth while to install compound or condensing engines when fuel was valueless, simply for the reduction in boiler plant. When motor driving of a proposed plant is in contemplation, the prime mover may be a simple or compound, condensing or non-condensing steam engine direct-connected to the generator, or else a steam turbo-generator. Fuel cost of course makes the gas or oil engine out of the question and plant cost eliminates hydro-electric power except in rare cases.

It has been said in an earlier paragraph that the standard sawmill plant includes a planing mill. This should be placed 200 ft. or more from the nearest roofed point of the sawmill proper (to meet insurance rules), which means 300 to 600 ft. from the main power house. Motor driving of new planing mills, except when very small, has become almost universal, so that this is generally assumed at the start. If we belt-drive the sawmill we must then have one prime mover for it and a steam-electric plant for the planing mill. It is obvious that there should be only one boiler plant and one engine room, containing both prime movers. But if the sawmill as well as planing mill is electrically driven, the two prime movers may be combined into one large enough to drive both mills, which is economical in first cost and is often done.

For the same reasons which have brought it into favor in other industries, the condensing steam turbo-generator has become almost universal in motor-driven sawmills; and compound condensing engines are not now running in any mill with which the writer is acquainted. When deciding on the method of power transmission, the choice for large mills is commonly made between (a) a sawmill

belted from a single Corliss engine and a planing mill motor-driven by a steam turbo-generator; and (b) both mills motor-driven by a turbo-generator. The comparison of costs which follows is on this basis for the larger mill, though for the smaller one both mills are belted from engines.

In a shaft-driven mill the weight and cost of the lineshaft and various countershafts are considerable. The power-receiving section of the lineshaft is about four inches in diameter in a single band mill, and 8 in. to 10 in. in diameter in the largest mills, and the shaft may be 300 ft. long. In large mills countershafts will be required for the log jack, log cut-off saw, log canter, band mill, gang mill, resaws, edgers (this requires a right-angle drive, usually through mortise gears), slasher, trimmer, hog, lumber sorter, timber trim saw, and lath mill. When the individual motor drive is installed all these shafts with their attachments are not required, and the difference in the total of sawmill machinery is almost entirely in these omissions. As all the motors will be probably set within 600 to 800 ft. of the will be little changed. The amount of this saving is given below in three cases, the figures covering all sawmill machinery proper, installed, but no power-house equipment.

	Mechanical Drive		Electrical Drive	
	Weight, Lb.	Price	Weight, Lb.	Price
Mill No. 1	445,296	$112,345	402,749	$104,410
Mill No. 2	701,500	173,500	620,000	153,698
Mill No. 3	763,150	189,079	674,150	166,789

Sawmill and woodworking machines are almost always driven at constant speed, in one direction, and (except band mills, band resaws, and a few other cases) can be started at light load; so the squirrel cage induction motor is generally applicable. The direct-current open motor is of course objectionable on account of fire risk from sparking commutators. For driving band mills, heavy band resaws, and in other places where large starting torque is necessary, the wound-rotor motor with starting resistance is used. The current (60-cycle, 3-phase) is commonly generated and used at either 480 or 600 volts, avoiding the use of transformers except for lighting. As all the motors will be probably set within 600 to 800 ft. of the power plant, the saving in wiring does not justify high generator voltage and transformers.

In the complete paper two tables are given showing the comparative cost of sawmills complete for both motor drive and shaft drive. In Table 1, which gives the estimated cost of a single band mill with a daily capacity of 30,000 ft., the figures are about 11 per cent. higher for motor drive, but in Table 2, which is for a double band and resaw mill with a daily capacity of 120,000 ft., the first cost is about 8 per cent. less for the motor drive.

Comparison of Operating Conditions and Expense

In operating expense the motor-driven sawmill makes a saving in power-transmission loss, upkeep of shafting and belting, use of oil, waste, and supplies, depreciation, fire risk and insurance premium. The complete paper gives a table showing the power consumption of various sawmills for both mechanical drive and electrical drive, the horsepower consumed being less in the case of electric drive.

The average life of belts in a sawmill is not more than four years, which means a running expense of 25 per cent. of the total belting cost yearly. The saving in oil, waste, etc., by changing over from shaft drive to motor drive has been estimated at 40 cents per 1,000 ft. of lumber per day. No attempt is made to give comparative figures for depreciation, but the lumber manufacturer's accountant should consider the low second-hand value of shafting equipment if it must be moved and refitted for new conditions, as contrasted with the easy interchangeability of motors. One of the lumbermen's mutual insurance associations recognizes motor driving by a reduction of 25 cents in premium. Another association, while not specifically recognizing electric driving, usually makes a 5 per cent. deduction from total premium on account of the clear and open condition of the lower floor thus produced.

Separate steam engines are also sometimes used in a belt-driven plant to drive certain large machines (e.g., a gang mill) or groups of machines. These engines proportioned for their average load do not have the peak-carrying capacity of equivalent motors with a large generator behind them. When the mill is driven by several steam engines of small size a reduction of shafting equipment may be made, but each engine must carry its peak load without help. Motors of corresponding horse-power rating connected to one large generator will draw on an ample power reserve during peak loads. Two gang mills have come under the writer's observation, of the same size and make, one driven by a steam engine belted to it individually, the other motor-driven, both machines nominally running at 225 r.p.m. The engine-driven gang ran at 225 r.p.m. light, and 200 r.p.m. fully loaded. The motor-driven gang ran at 225 r.p.m light, and about 223 r.p.m. loaded. As the rate of lumber feed to the gang is governed by the speed, the steam-driven gang was cutting about 10 per cent. less than the other. Cases are on record where mills by simply changing from shaft drive to electric drive have increased their production 15 per cent. This problem of speed maintenance has not been sufficiently studied by sawmill operators.

The equipment for hauling logs into the sawmill and cross-cutting them may be motor-driven. The remaining log-handling equipment is actuated by direct-connected steam cylinders. Sometimes an overhead log "canter" is used for turning logs, supplementary to the "nigger." It turns the logs by a hook attached to a chain wound on a drum and may be motor-driven.

Details of Motor Application.

On the other hand jump saws for cross-cutting boards and timbers, hinged transfer skids, the mechanism for raising press rolls on edgers and gangs, and for raising saws on a trimmer, are moved by direct steam or compressed-air cylinders. Also the carriage which holds the log while being sawed is almost always reciprocated by a steam engine through a wire rope or by a steam cylinder directly connected to the carriage itself. All these steam-actuated devices are so simple and positive in action that there is no apparent advantage in developing electrical methods as a substitute.

The other principal machines are connected to the motors through flexible couplings, except band mills, band resaws, and gangs. The band mills may be so driven, but there are certain objections which should be considered: the motor cuts partly through the mill floor, is inconvenient for inspection, and in the way of workmen; and motor speeds do not always match the speeds of the band mills, requiring a speed-changing device coupled between motor and band-mill arbor. Log band-saw mills are built with wheels, 6, 7, 8, 9, 10 and 11 ft. in diameter. Irrespective of wheel diameter, the saws, and hence the wheel rims, are run at speeds up to 10,500 ft. per min.—plain cast-iron wheels at twice the ordinary limiting speed of engine flywheel pulleys. Another condition sometimes weighing against connecting a constant-speed motor directly to a band-wheel arbor, is that in northern hardwood mills the saws may be run at different speeds in winter and in summer. If much frozen timber reaches the saw, operators prefer to reduce the speed 1,000 or even 2,000 ft. per min. below that used when logs are clear of ice.

Gang mills run at such a low speed and require so much power that direct-connected motors of sufficient size would be very expensive, and standard practice up to the present has been to belt from a higher-speed motor.

The lumber-transporting equipment, including live rolls, chain transfers, chain and belt conveyors, is most conveniently and cheaply group-driven, though there is now a tendency to go farther in the use of individual small motors than there was a few years ago.

The filing-room machines for sharpening saws require little power and are arranged for mounting individual motors directly on the frame in most cases.

When specifying sizes for sawmill motors it must be remembered that very great and sudden peak loads are encountered, and the ratings must be larger on this account. In general, it is found that the load factor on an entire sawmill is about 60 per cent. of the total nameplate rating of the motors.

A condensed list of the machines found in the ordinary sawmill follows, the sizes of motors suitable therefore being stated in each case.

Machines	Motor Sizes
Log jack, for hauling logs into the sawmill	25 to 50 hp.
Circular log cut-off saw, for dividing long logs after being drawn into the mill	25 to 50 hp.
Drag saw, for cutting off logs too large for the circular saw above mentioned	15 to 40 hp.
Overhead log canter, for turning large logs lying on the log storage deck or on the carriage	10 to 20 hp.
Band mill, for ripping the logs which are moved back and forth in front of it on the carriage	100 to 300 hp.
Circular head saw, sometimes used instead of band mill	100 to 400 hp.
Power setting machine, for moving log forward after every cut into position for the next cut. This machine is mounted on the carriage. Two types are used, one direct steam-driven, the other power-driven. The latter is used exclusively for the heaviest work, and motor may be mounted on carriage	5 to 10 hp.
Live rolls, or power-driven rolls, for transporting lumber after being sawed. These are connected and driven together in trains of 6 to 20 or more, according to the mill design; power required per roll	0.4 to 0.6 hp.
Band resaw, for further reduction of large pieces dropped by the head band mill. It may be either vertical or horizontal. The latter is used for resawing slabs as well as splitting thick stock from the head band	75 to 200 hp.
Transfer chain tables, for moving lumber sidewise between machines. These are of such varying length and width according to the individual case, that no power requirement can be specified.	
Gang mill, for sawing entire log into boards at one passage through the machine. Two opposite slabs are taken off the log by the head band saw, giving the log two flat faces, after which it is fed to the gang	50 to 400 hp.
Edger, for ripping bark edges from the boards and squaring them	15 to 250 hp.

What Makes a Real Live Lumber Salesman?

He Must Systemize and Plan His Work, and Take it for Granted that Every Customer He Calls Upon Wishes to Buy not Only Lumber but His Lumber

In these days when business is quiet and orders are few, the exercise of many qualities is pressing itself to the front. Among these desirable characteristics are salesmanship, efficiency, economy and production. From time to time there has appeared in the "Canada Lumberman" special contributions dealing with various aspects of these matters which enter so largely into the web and woof of the business fabric to-day. In industrial plants those in charge have been urged to conserve to the utmost both material and labor so that the maximum of output may accrue with a minimum of outlay. It is desirable that operators should keep their mills operating, and accept all the business that offers, but they are not anxious to take a loss on every order booked. The majority, however, are willing to forego all profit in an endeavor to keep the wheels revolving and provide work for their employees, and are asking for the co-operation of those in their service to hold down costs to a minimum. Operatives are also being requested to practice economy, of which one writer says: "Economy can almost be termed a virtue. Its steady application becomes a fascinating hobby and gives a pleasure and interest in our occupation."

Equally important as industrial efficiency, economy and production is the great question of salesmanship. Business has been quiet for some time and orders are few. Prices have dropped to cost and in some instances below the cost of production, and yet there is a tendency on the part of the public to demand still lower values.

It is easy when times are flourishing, stocks scarce and demand lively for most anyone to show a satisfactory sales record in the line of wood products. When conditions are reversed, demand languishes and stocks become heavy, there is a disposition to sit tight and watch developments. Then salesmanship becomes an entirely different proposition. The soil is not nearly so fruitful and requires more intensive and diligent cultivation. It is in days like these that the true qualities, reserve force, initiative and executive of the salesman come to the forefront. He must be something more than a caller, a glad hand-shaker, an order taker or a want medium.

The salesman first of all can derive many advantages from knowing the history of the firm whose goods he is selling and possessing a thorough knowledge of lumber. He must be exceptionally well acquainted with the policy, product, plan and service of his house.

Touching upon the question of salesmanship, it perhaps may be advisable to reverse the order of affairs and state some things which teh road representative in the lumber-selling line should avoid. Among these are prolonged visiting, undue familiarity with customers, forgetting to remove his hat when entering a customer's office or placing the chapeau upon the desk. Other equally salient points are not to knock a competitor, which is not only short-sighted but undignified and unpsychological. Negative suggestions presenting a situation where a choice can be made between buying or not buying should never be brought up.

Qualities Which Are Not Desirable

Passing from the negative to the affirmative or positive, some pointers on salesmanship which are the result of years of observation, experience, insight and judgment may not be unwelcome at this particular period. Here is an outline as set forth by one sales manager to those engaged in his service. The points will be read with interest by everyone engaged in the business of selling.

"A thorough knowledge of facts is of vital importance to the salesman. This knowledge, however, is scarcely of greater importance to him than his personal characteristics and rules of conduct. Hos poise and polish, his ability and geniality, his truthfulness, sincerity and fairness in all his dealings, are of the utmost importance.

"Naturally a company desires that its standing with its customers, and the community at large, should be the highest. It knows, of course, that its valuation and reputation are, in a large measure, determined by its salesmen, by their integrity and gentlemanly conduct.

"The salesman must systematize and plan his work ahead. He knows, not later than Friday of each week, the territory he will cover the following week. He should plan each day's work the night before by preparing a memorandum of the customers upon whom he expects to call, and noting the subjects to be taken up with each.

"He should make a definite schedule. Confusion is never the fate of those who are resolved on a definite line of action.

"An early start in the morning usually means a good day's work. The salesman should arise early enough to enable him to begin his calls between 8 and 8.30 a.m. He must take it for granted, and work on the assumption, that every customer on whom he calls wishes to buy not only lumber, but his lumber.

Intensity is Most Potent Factor

"Intensity of determination, when it reaches a certain point, possesses an influence which very few ordinary mortals can resist. He should be determined to secure an order from every customer upon whom he calls.

"A salesman should never, and particularly when interviewing a customer, talk in a loud, boisterous manner. He can be just as firm when talking quietly.

"He must not attempt to force an interview when the buyer is too busy to consider his proposition.

"It is, of course, desirable, and usually profitable, for a salesman to get into a customer's plant or yard. The proper way to do this is through, and by permission of, the purchasing department.

"He should never enter an office, factory or lumber yard when smoking or holding in his hand an unlighted cigar, cigarette or pipe.

"He must not apologize for any of our products. It is unnecessary. If he is not fully convinced that his company and its products are the best, then his talk and influence will have but little weight.

"A salesman must, at all times, be energetic."

New Position for R. F. Logan

R. F. Logan of Halifax, who for the past four years has been in the employ of Messrs. Dunfield & Co., Ltd., resigned his position at the beginning of March, to enter the firm of F. J. Logan & Son, as manager of the Halifax office.

Hon. F. J. Logan, the senior member of the firm, is a member of the Legislative Council for Nova Scotia, and one of the best known lumbermen in the province, with which industry he has been actively identified for the past thirty years.

The timber limits owned and operated by the company are situated on the Musquodoboit river. Two years ago a new mill was

R. F. Logan, Halifax, N.S.

Hon. F. J. Logan, Halifax, N.S.

built, equipped with new and up-to-date machinery at Musquodoboit Harbor, on the Eastern branch of the C. N. Railways, providing shipping facilities by both rail and water.

The woods operations and sawmills are under the management of L. W. Logan. Ordinarily the yearly output is in the vicinity of five million feet, but during the present season they do not expect to have over 50 per cent. of an average cut, owing to the general depression in the lumber business.

By far the greatest increase in Latin-American lumber trade since 1913 has been in the West Indies, where the gain in value in 1919 was 148 per cent. over 1913, most of this having been in Cuba.

Leading Eastern Lumber Exporter

Colin C. Tyrer, Halifax, N.S.

Colin C. Tyrer, who is president of the Colin C. Tyrer Co., Limited, Halifax, N.S., is widely known to the lumber trade in the east where his firm is one of the leading organizations in forest products in the Dominion. The Colin C. Tyrer Co. are manufacturers, dealers and exporters of spruce, pine, hemlock and hardwoods, and have built up a wide overseas connection.

Mr. Tyrer served his apprenticeship in the timber trade in Liverpool with James Smith & Bro., and came to Canada as the representative of Smith, Tyrer & Co. some eighteen years ago. Four years later he started his own firm and turned the organization into a limited liability company in January, 1916.

Mr. Tyrer was born in Liverpool in 1881 and has always taken a deep interest in the development and expansion of the wood products industry. In addition to being head of the Colin C. Tyrer Co., Limited, he is a director of Christopher Lakes Lumber Co. and of the Port Daniel Lumber Co., and vice-president of Shatfords Limited. He is interested in golf, fishing and boating and is a member of several clubs.

Wooden Shingle Legislation is Defunct

Frank Hawkins, of Ottawa, secretary of the Canadian Lumbermen's Association, has sent out a notice to the members to the effect that word has been received from George F. Lewis, Deputy Fire Marshal for the Province of Ontario, and also secretary of the Ontario Fire Prevention League, stating that as far as the latter organization is concerned, no action is contemplated just now with regard to legislation affecting the wooden shingle. Mr. Lewis adds that when anything further develops, he will be pleased to communicate with the C.L.A. Mr. Hawkins advises that this disposes of the matter for the present and the C.L.A. has the further assurance from the Ontario Government that no definite action will be taken in this connection without an opportunity being afforded the lumbermen to appear in opposition to any proposed measure prohibiting the use of the wooden shingle.

It was proposed by the Ontario Fire Prevention League to prevent the use of shingles on roofs on any new buildings hereafter to be erected nearer than 50 feet to an existing structure, and the same regulation would apply in all cases of extensive repairs to roofs.

Wholesale Lumbermen Hold Jolly Dance

A most successful dance was held at the Masonic Temple, Toronto, on Friday, April 8th, under the auspices of the Wholesale Lumber Dealers' Association, Inc. There was a large attendance and the social event was thoroughly enjoyed. Excellent music was provided and everything passed off with great eclat. The assembly was the first of its character ever held under the auspices of the Wholesale Lumber Dealers' Association, and judging by the happy results which attended the function, it will not be the last. Much credit for the way in which everything was conducted is due to the members of the Entertainment Committee composed of A. K. Johnson (chairman), D. C. Johnston and L. D. Barclay, Toronto.

Newfoundland Lumber Business is Dull

The Newfoundland timber cutting industry for the present year has virtually collapsed as a result of low prices due to over production in previous years and to the depression in the world the past season. This depression has come upon the colony very rapidly and recently, and when the log cutting interests began making plans last autumn for a winter's cut they had no expectation that things were going to result, during the winter, as seriously as they did, and hence made their plans on somewhat the same generous scale as in previous seasons.

For the fiscal year which ended on June 30, 1920, the cut of forest growth in the Island for industrial purposes apart from what was cut for pulpwood and pit props, amounted to 25 million feet valued at about one million dollars and nearly 300 sawmills, most of them importable contrivances erected on the lesser streams around the Island, were engaged in the manufacture. These mills gave employment for part of the year at least to over one thousand men and the industry was one that assisted materially in supplying local requirements for house building, ship building and all sorts of industrial purposes, some being also exported, but not much, quantities being taken to England in steamers which conveyed pulp and paper to perfect the storage of the cargoes, and to fill up waste places in the holds. Efforts have been made on various occasions to develop a trade in Newfoundland lumber with the United Kingdom, but for a variety of reasons it has not been as successful as it might be. During the war, of course,, an enormous trade might have been done if shipping had been available, but for this reason no traffic in either sawn lumber or pitprops was possible, though very large quantities of the latter were cut and a call for lumber for export could have been met advantageously if such had been put forward.

It was hoped that, with the return to peace time conditions, the necessity for rebuilding the devasted regions of Europe, the lack of lumber due to the destruction of immense forests in the invaded regions, east and west, and the consequent requirement for lumber stocks from other quarters, Newfoundland would have been able to secure a share of this trade and because of the unsettled conditions in Russia and Finland the same hope was held with regard to pitprops, but so far there has been no indication that any share in whatever trade in these directions is likely to develop or fall to this country; indeed it is considered now that the chance of this is very unlikely and because of that fact dealers are now abandoning the idea of sawing this winter's cut of timber or of exporting any of the pit wood cut at the same time. Sales of large quantities of the latter material have been made to the Newfoundland pulp and paper mills to an unusualy large extent and it is said now that considerably larger quantities will be offered these companies during the current season, wood which otherwise would be made into lumber but which the holders lack the financial capital to manufacture in that way.

Getting on Well in Lumber Game

McClung, McLellan & Berry, who are now successfully engaged in lumbering operations at Kinglake, Ont., say they are taking out considerable number of ties, and cutting the tops of trees into cordwood, of which they shipped a great deal during the past winter.

One year ago the firm bought a limit of 313 acres and started operations with a leased mill in May. Three or four months later they purchased a mill and engine and have been running pretty steadily ever since then. Their output is from 5,000 to 8,000 feet per day.

The members of the firm are Norman McClung, H. McLellan and Dr. R. N. Berry. They have known each other for a good many years but were not engaged in the lumber business before their present undertaking.

Last season the firm cut about 500,000 feet of hardwood. They hope to see the general conditions in the business revive considerably within the next few weeks.

Having the "Nose for Business"

The capable newspaper man has a peculiar and particular qualification that is known among members of the fourth estate as the "nose for business." This faculty is an intangible something which enables the newspaper reporter to detect matters of public interest that would escape the attention of the ordinary citizen. It is the ability to recognize large or small affairs that will make good "copy."

The "nose for news" might not be a bad faculty for the retail lumberman to possess. He is not in the newspaper business, but he has lumber to sell. If he knows what is going on in his community—who is going to build, who is thinking of building, and other similar items of information—he is in position to be first on the ground with his figures and to direct the mind of the buyer to his yard before the buyer has had an opportunity to commit himself in some other direction. Such a dealer also watches the business and plans of corporations and business houses in his locality and when they contemplate an addition if he has a "nose for news," he soon learns of the fact.

After all, the "nose for news" is chiefly a wide acquaintance and the faculty of keeping constantly on the alert for information. A reporter hears a remark made on a street car, detects some unusual circumstance which arouses his curiosity, and follows the lead until he has learned the "why and wherefore" of the whole matter. Let the retail lumber dealer in a similar way keep his eyes and ears open. When he hears an intimation of prospective building let him find out who is going to build, when he is going to build, and then be the first one to offer his assistance.

The "nose for news" in the retail lumber yard is merely the "nose" for business. The widening of acquaintance means more than simply learning what is about to happen. It is good for the manager to know many people, for many people ultimately become buyers on a larger or smaller scale.

Association Appoints Transportation Manager

R. L. Sargant, 64 Somerville Ave., Westmount, Que., has been appointed transportation manager of the Canadian Lumbermen's Association, and will enter upon his new duties on May 1st.

It will be remembered that, at the last annual convention of the C.L.A., held in Ottawa, a resolution was unanimously carried in favor of establishing a traffic department and leaving the details to a committee appointed for this special purpose. The proposition of establishing a traffic bureau was strongly endorsed by representative members from all parts of Canada.

The committee consisted of A. E. Clark, Toronto, chairman; Dan McLachlin, Arnprior, president of the C.L.A.; A. D. Huff, Montreal; E. C. Barre, Sarnia; E. R. Bremner, Ottawa; J. W. Smith and E. A. Dunlop, Pembroke. A meeting was held at the office of Secretary Frank Hawkins in Ottawa on April 4th, when fourteen applications for the position were thoroughly discussed.

After careful consideration and looking toward the best interests of the lumber trade with reference to transportation matters, a selection was made and the position offered to and accepted by R. L. Sargant, of Montreal. Mr. Sargant comes to the Canadian Lumbermen's Association with a fine record regarding experience and ability, and it is believed by the members of the commtitee that his appointment will be of very considerable value to the work and service of the C.L.A. The committee further state they are of the opinion that the selection is a good one and that practical results will follow the inauguration of a traffic branch of the association.

Mr. Sargant will assume office on May 1st, and will have headquarters at 16, 17 and 18 Fraser Building, Ottawa, where Frank Hawkins, secretary of the association, is also located. Any questions regarding transportation, the best routing and correct rate, cla'm for overcharges, etc. (where individual effort to secure settlement has failed), or advice regarding transportation matters generally, may be referred by members to Mr. Sargant.

Mr. Sargant has had 21 years' experience in railway traffic and tariff matters, having spent 17 years in the service of the Grand Trunk Railway in Toronto and Montreal. For the past four years he has been transportation manager of the Canadian Explosives, Limited, Montreal.

They Want to Know About White Pine

Many interesting matters were discussed at the special meeting of the South Western Ontario Retail Lumber Dealers' Association, which was held in Chatham on March 29th. The attendance was large and the present conditions of trade, together with the building outlook and resumption of industrial activity were thoroughly gone into. It was decided to have the secretary of the association confer with the Wholesale Lumber Dealers' Association and try to get a line on the white pine situation. The following letter has been sent by the South Western Ontario Retail Lumber Dealers' Association to the secretary of the Wholesale Lumber Dealers' Association, Toronto.

"The facts are these:—No. 1 Common and better B. C. white pine can be laid down at our yards at a very much less price, than our Ontario white pine can be purchased at the mills, as is also the case with clear fire and cedar. We can also buy American lumber which makes a very good substitute for white pine, at much lower price.

"The matter was discussed at our meeting and some members stated, 'Why bother with white pine at all, it is our privilege to buy where we can buy the cheapest.'

"While this on the face sounds all right, there are others that feel that it is our birthright to handle our white pine and think that parties holding this lumber should take into consideration the fact that they took every advantage of the market when prices were advancing, and that they should also give us white pine at its replacement value, regardless of what it cost them.

"Farmers advance the argument that cattle, hogs, wheat, oats, etc., have dropped in price, and that other commodities should come down in proportion, or else they will not be able to build.

"One well-known woollen manufacturer last fall loaded his customers up with all the goods he could possibly handle, maintaining that prices would not drop, and as soon as he had done this, dropped the price nearly half, telling them to take their share of the loss.

"If retail lumber dealers loaded themselves up with substitutes for white pine, what would be the effect on the market? If it would tend to lower the price, why not lower it now and give the retail dealers who are loyal to their own product a chance to compete with these substitutes.

"We know what effect these other lumbers had on hemlock, also what happened to wooden shingles when they let the patent roofing manufacturers get such a hold on the market.

"We also know what happened a couple of years ago when B. C. products were coming into this Eastern market. A great wail went up from the Eastern producers, telling them how foolish they were to sell their lumber so cheaply. We also know what effect it had an the B. C. mills are suffering from the re-action now.

"Some dealers stated that it is purely a case of supply and de mand, but to satisfy all concerned would be pleased to have an oppor tunity of discussing the matter personally, or through your asso ciation."

Mill Work Cost Conference at Chicago

The Seventh Annual Meeting of the Millwork Cost Informatio Bureau will be held at the Congress Hotel, Chicago, on Wednesda April 27th. All members of the trade, whether members of th Bureau or not, are invited to attend. The annual meetings are hel for the express purpose of receiving, at first hand, suggestions an criticisms in order to make the bureau still more effective. At thi year's conference many of the keenest executives and cost talent ex ponents of the industry will be present and much information tha is of practical and immediate benefit to all concerned will be presente Every attention will be focused on practical cost and estimatin procedure as applied to the woodworking business. There are sev eral Canadian firms which are members of the Millwork Cost In formation Bureau.

An Oak Just Four Centuries Old

Before Basking Ridge, N. J., took its place in the world an oa stood there. The people of this New Jersey town can trace the tree history for 400 years, but the church is only 200 years old. Mis Margaret S. Hitchcock, of Morristown, and Mrs. William D. Baneke of Basking Ridge, have nominated the tree for a place in the Ha of Fame which the American Forestry Association is compiling trees with a history. The tree has a circumference of fifteen and half feet six feet above the ground.

Times Are What We Make Them

A portrait painter sat in a French cafe sipping his wine. His small bottle was finished and he was about to order more when his eyes rested on a newspaper lying near. He read the headline "Hard Times are Coming." "Hard times," he said, "we must economize," so instead of calling for a fresh bottle he called for his bill, says "Mac's Maggie Zeen."

The landlord, knowing the artist's habits, surprised that the order for the second bottle was not given, approached his customer and said, "Not going so soon? Is my wine not good?"

"Excellent," said the artist, "but hard times are coming and I must economize."

"Hard times," said the landlord, and he scratched his head, then he called his wife. "That new silk dress you ordered," he said; "you must make cotton do. The artist tells me hard times are coming. We must economize. Cancel your order and buy something cheaper."

When the landlord's wife cancelled her orders she told the dressmaker what her husband had said. "We must prepare for hard times," she said. "Hard times are coming; my husband and the artist say so."

"Hard times," said the dressmaker, "hard times are coming. This is no time to expand. Those improvements I had intended to make must wait."

He put on his hat and crossed the street to the builder with whom he had planned additions to the show room.

"The changes I planned must wait," he said. "Do not proceed with the work. Hard times are coming. We must economize. When conditions improve I will call you in but I cannot invest money in the face of hard times."

When the dressmaker left, the builder sat down and wrote a letter: "My dear artist friend, I must postpone sitting for my picture. We are going to have hard times and I think it best to wait until things are settled before indulging in this expense. Hard times, you know, must be regarded."

When the artist received the letter he went to the cafe. He ordered a small bottle—just enough, he said, to sooth him. Staring at him from a nearby chair was the newspaper he had seen two days before. He picked it up, scanned it more closely and found that it was two years old.

Moral: Times are what we make them. Life is a circle through which cheerfulness or dejection flows. The stream does not stop but passes on, leaving something of what it has or taking what we have to give and reaching us again poisoned or purified by contact with us and those we've helped or harmed.

Some Large Operators in the East

New Brunswick Firms Which Conducted Extensive Lumbering Operations Last Year

The lumber operators on the Crown Lands of the province of New Brunswick who paid $1,000 or more in stumpage towards the total of $1,252,787.50 during the past year were as follows, according to the annual report of the Crown Land Department

Anderson, W. S. & Co.	$ 6,786.49
Albert Lumber Co.	2,863.14
Alcorn, A.	12,926.44
Anderson, Percy J.	3,000.00
Bamford Brothers	3,524.20
Bathurst Lumber Co.	147,273.46
Baird, Charles G.	1,234.35
Burchill, John P.	12,267.70
Buggie, Michael	1,366.40
Chapman, A. C.	5,730.32
Continental Lumber Co.	21,386.03
Culligan, J. & A.	27,680.40
Dalhousie Lumber Co.	26,572.10
Dominion Pulp Co.	42,436.61
Davis, O. B. & Company	3,791.72
Donovan, James	1,385.61
Doak, Harvie Estate	1,161.79
Fraser Companies, Ltd.	65,507.07
Flemming & Gibson	2,417.34
Gloucester Lumber & Trading Company	54,671.93

An Increase in Stumpage Rates

The report of the Minister of Lands and Mines contains the following paragraphs:

"There seemed to be a general opinion throughout the province New Brunswick that on account of the high price of lumber and e conditions then prevailing an increase of stumpage would be arranted. Accordingly on the first of August the rates were raised om $3.50 for spruce and other valuable species to $5 per thousand, ner lumber in proportion. It is somewhat unfortunate at this time writing the new rates should go into effect with a falling market, t be that as it may, the new rates are still lower than stumpage id on private land, and I am satisfied the action of the government ll be sustained.

"A conservative estimate, for the present season, so far as statis- s are available in the department, would indicate that no more an two hundred millions of superficial feet would be cut, against 365 million feet cut last year, including everything. This falling off is attributable to the fact that the American market is overstocked and as a consequence prices have fallen. The smaller cut of this year may be looked upon by us as a blessing in disguise, nay more, it is the opinion in the best informed circles that a cut of 20 millions on crown lands, for some years to come, should be the limit for New Brunswick, unless an increased quantity is justified by cutting out the vast areas devasted by the spruce budworm.

"There is no more destructive agent in New Brunswick, and I may say in the whole of the Dominion, than the forest fire. I think I am safe in saying that during the past quarter of a century no crown land report has been laid before the Legislature without a reference to the ravages of forest first. The spring of 1920 was the driest in fifteen years. The forest destruction was consequently great; there were in all 312 fires, causing an estimated damage of $690,000, of which amount $87,000 was crown lands. Sixty thousand acres of crown lands were burnt over, of this, however, one-fifth was old burns. Eighty per cent. of the fires occurred between the 16th of May and the 10th of June, a period of 25 days and during the whole of that time little or no rain fell."

Architecture Most Admirable of all Arts

At the general meeting of the Architectural Association recently in London, England, Mr. Gordon H. Selfridge read a paper on "Architecture and Commerce." Mr. G. Gilbert Scott presided. As a very ardent devotee of "that delightful game called business," Mr. Selfridge said he took the view that commerce had decidedly failed to do its share in producing beautiful buildings. Commercial architecture had advanced more rapidly in America than in other country, because there the man who was in commerce—and that included practically everybody—took such a pride in his undertaking that he felt he had failed in his duty to himself, his business, and his city, unless he had housed that business in a building which was consistent with its purpose and well constructed. The most conspicuous and the least successful of American commercial edifices were the high buildings, or "skyscrapers." It seemed to him almost impossible to achieve good architecture with a building that was four or five times as high as it was wide. His friends in America were really proud of the Woolworth building, which was referred to as a "cathedral of commerce," but he had little admiration for it. If it rested with him, he said, he would certainly not allow high buildings in London, for the reason that he had more regard for the beauty of the city than the utility of the buildings.

The public did not quite realize all that a building meant, he continued. Once a building was erected it remained to all intents and purposes for ever. In America, it was true, the general opinion was that any building more than 25 years old should be pulled down, but in this country a building was supposed to last until it fell down. Of all the fine arts architecture was the most admirable, because it combined qualities of great utilitarian value with a superlative degree of beauty. Until now commercial architecture had been surpassed by eccelsiastical architecture and public buildings, but there was no doubt that commerce had begun to realize its responsibilities in the matter, and in the future would have to its credit many edifices which would be a source of pride to the city in which they were placed and of joy and delight to the public.

African Teak is Strongest Wood

The heaviest timbers are oak, teak, jarrah (an Australian wood), and greenheart; the lightest are willow, poplar and spruce. The difference is enormous. A cubic foot of teak will weigh over 80 pounds, while a cubic foot of willow does not exceed 13 pounds. All timber is stronger at maturity than at any other time. Seasoning will actually double the strength of green wood. To test the strength of different timbers without the elaborate machinery used for demonstration purposes, a simple plan is to take a piece a foot long and an inch square, place it between two supports and hang on its centre a tank capable of holding about 1000 pounds weight of water. This tank is slowly filled, and the bending and breaking strains carefully noted. The results of such tests go to prove that oak, usually considered the stoutest of timbers, is wrongly placed, and that ash really comes first. A piece of ash of the dimensions mentioned took a weight of 690 pounds before it broke; while oak broke at 501 pounds. Even beech took a weight of 625 pounds before cracking. Larch, useful timber as it is, comes a long way behind it, for it breaks at 440 pounds; elm goes at 405 pounds, and Scotch fir at 381. The strongest of all woods is the African teak oak, which will stand up to 855 pounds; it beats the famous East Indian teak, but not by a very large margin.

Mahogany and cedar were cut and transported to Spain more than three hundred years ago from Cuba.

Lumbermen Must Put Up Fight for Business

To Doubt that Building Boom will Materialize is to Question the Ability of Each Community to do its Full Share in Meeting Great Crying Need

"The fundamental principles for success in any business, be it large or small, are exactly the same. Most large businesses started from a small beginning, and the same basic principles that made their success thus far, are those that must be followed to insure a continuance of that success. There is no real difference in the conduct of your business if you would be successful and that of any other great business you may choose to use as a comparison except a difference in your selling radius," said F. L. Campbell of Buffalo, in a recent address.

"An analysis shows that the weak point of most businesses is selling. A dealer or a manufacturer makes his profit on what he sells. The majority of businesses buy intelligently, most of them are managed well, the weak link is selling.

"The present is a buyer's market from the consumer's standpoint as well as the dealer's. To-day goods must be sold. This is the exact diametrical opposite of the conditions we all were up against several months back, when the manufacturer's problem was to make sufficient goods to supply the dealer's demand and the dealer was finding it impossible to keep on hand sufficient stock to supply the consumers.

"The period of re-adjustment, if it has been taken full advantage of, has proved to be a real help. It has given both the time and the opportunity to clear the decks for action to remove everything which might prove a detriment or a disadvantage in waging a successful fight.

"Sales volume this year will come only to him who makes a real effort—who puts up a real fight for it. This is the time to make your outfit a real fighting organization from the head down to the smallest employee.

"You must go after business. Organize your business. Make a definite task for each one in your organization. Centralize and concentrate responsibility on each single individual. Make a definite policy.

"Most manufacturers maintain a real dealers' service in connection with their manufactured product. If it is not used to the limit the dealer is overlooking one bet in his fight for sales volume.

"Most of the few dealers who do use these helps, mail them out to unclassified mailing list, and so hit everything in general and nothing in particular. The wise dealer who is getting real results sends this material to a carefully selected list of prospects, with the result that his mailings bring results.

Keeping in Touch with Prospects

"Keep a list of prospects. Every inquiry you get should be listed on a prospect card, giving full particulars, and should be followed up. Then when it is necessary to make up a list, go to these cards and get names of people who are real prospects for whatever you want to push.

"Most manufacturers have a real service to render in advertising electrotypes, not only by advertising the merits of a particular product, but helping the dealer's general business. The time to advertise strongest is when you need business. That is the time to make your advertising more attractive; to get across your message in a real way.

"But, the success of your business, depends entirely on the measure of service and satisfaction you render to your community. Your customer buys from you, primarily because of his confidence in your ability to supply him satisfactory material for his needs, and satisfaction is measured over a term of years. Consequently it is your responsibility not only to sell him quality goods, but to go one step further and see that he is supplied with the necessary knowledge to use those goods so that satisfaction will be assured. A real success in your individual business means a real use of this customers' service.

"Your entire business structure is erected and maintained on the foundation of Service, and not enough business houses appreciate this to its fullest extent. Still less of them use it as a selling factor. In the last analysis what constitutes service? One of the very first things that makes for service is to carry in stock what your selling community needs and demands. The second to carry at all times a sufficient stock to meet those needs and demands. You must analyze your selling community. You can't do this in an office, you must get out among your people.

"To keep sufficient stock on hand to meet your consumers' needs means you must stop guessing and get down to facts. Keep a stock record showing your purchases, your sales, and your stock on hand. Be in a position to know from your office records the condition of your stock at all times.

A big building program is bound to start in the near future. You know that each year since 1914 we have built fewer homes than were needed, and that the accrued shortage now is one million homes.

"Check yourself up. How far behind is your community on its building program? What kind of shape is your business in to meet the situation which is bound to materialize? To doubt that this building boom will materialize is to doubt the stability of the American public, to doubt the ability of its people to meet the situation and to question the ability of your community to do its full share. Again you must take the lead. Be a booster. To build up your community means to build up your business. America expects its business men to readjust conditions. We cannot, we must not, go on living under wartime conditions. The strength of the American republic is the American homes. We are a home loving, a home building race, and we must not lose that wonderful factor of our past and present success. The return to home building is sure to come. The sooner every building material merchant puts his shoulder to the wheel, the quicker it will be here."

Extending Aerial Work in Forest Surveys

Ellwood Wilson, Grand Mere, Que.

If the programme submitted to the government by the Air Board is approved, a large amount of aerial work in connection with forestry surveys and fire protection will be carried out next year. At the meeting of the Aerial League, held in Montreal recently, Lt.-Col. R. Leckie, of the Air Board, outlined the programme, and Elwood Wilson, of the Laurentide Company, spoke on commercial aviation as applied to forestry work.

Lieut.-Col. Leckie stated that it was proposed to extend the work in the West, particularly with regard to fire protection, a seaplane being used in Manitoba. At the instance of the Commission of Conservation, work on timber surveying would be undertaken in Northern Ontario. In Quebec the provincial government had asked that double the work be undertaken, the government having found aeroplanes of the utmost value in surveying timber limits. The New Brunswick Government had requested the Air Board to carry out fire protection work.

Mr. Elwood Wilson pointed out that the St. Maurice Forest Protective Association was the first body to use aeroplanes for forest protective purposes, and that the Aerial League had been of great value in securing the loan of machines. Aerial machines could be used with great advantage in conserving the forest wealth—not only in fire protection but in ascertaining the extent of the resources. One of the problems to be solved was that of winter flying, as at present the capital invested in machines by private companies was locked up during the winter.

Mr. Wilson showed a number of pictures, and pointed out how, by taking photos from the air, foresters were able to distinguish very readily the different species growing on limits. The result was a great saving of time and also the securing of definite and accurate information.

Fire Badly Damages Shingle Mill

The shingle mill of Edgecumbe & Newham, Vancouver, B.C., was recently damaged to the extent of $5,000 by fire. The blaze originated in the dry kiln and spread to the mill proper. The loss is partly covered by insurance.

Canadian's Plans for New Zealand Forests

Capt. Ellis Formerly of Toronto is Undertaking Great Work in Rehabilitating the Depleted Timber Assets of Islands—Big Forward Movement

By A. C. Cummings, Auckland, N. Z.

New Zealand has embarked on a forward policy to replace her lost forests. Those forests have been destroyed in a few decades by settlers from Great Britain who with fire and axe have rooted out trees that were beginning to grow at the time of the Norman Conquest.

It is one of the greatest tragedies in the history of forestry in the British Empire, when the white man came to New Zealand there were fine forests of kauri, rimu, totara, and of New Zealand white and black pine. Forty years later these had largely disappeared—to-day

Capt. MacIntosh Ellis, Auckland, N.Z.

there is not enough timber in New Zealand for domestic requirements and the government has had to create a Forestry Department and import a Director of Forestry from Canada, to cover the waste land areas of the Dominion with trees.

The forests were burnt down by the farmers anxious to sow English grasses for the sustenance of their dairy herds. They were devasted by reckless cutting, the timber being used for house-building and railway ties without thought of replacing it. Even to-day on a train journey by the state railway from Auckland to Wellington in the North Island you can see the blackened tree stumps of one of the most valuable forests in the world, a forest of kauri, a timber which takes a thousand years to come to fullest maturity.

New Zealand has at last wakened up to the loss of her forests and is now seeking to make good the waste and devastation of the past. Some years ago she started tree planting by farmers, set aside acreages in unproductive country for tree-growing, established associations to help forward tree planting and otherwise tried to restore the country's lost timber resources.

Since the war she has gone a step further. She has created a Department of Forestry and put a returned soldier, Captain MacIntosh Ellis, a Canadian forestry expert, at the head of it. Captain Ellis in an interview recently told what he proposed to do to rehabilitate New Zealand's forestry resources.

"A careful view of the existing estimates of the quantity of milling timber in the country," he said, "shows an apparent volume of 35,000,000,000 superficial feet growing on about eight million acres. An inventory of the forest resources will considerably increase this forest capital. While this quantity appears larger it will require very careful husbanding and the introduction of considerable economy without delay if serious hardships are to be avoided in the near future. Under the forward forest policy of the government during the last two years the total area of Crown forest dedicated permanently and provisionally for applied forest management has reached seven million acres and it was hoped to increase this figure to twelve million. The primary purpose of the government in establishing this forestry service is the assurance of adequate timber supplies at a reasonable price for all time to come."

Much ignorance prevails in New Zealand regarding its native trees. Rates of growth of the kauri are still almost unknown and a knowledge of timbers suitable for bearing stresses and strains in building, is far from complete. Nevertheless, it is hoped that the teaching in forestry now proceeding in technical colleges will turn out a body of expert young foresters who will undertake scientific investigations into New Zealand timber that will form guidance for future planting.

Estimating the annual timber consumption in the next generation at 1,000,000,000 superficial feet the national requirements of New Zealand which it is hoped to satisfy within the next quarter of a century are as follows:

1. The State indigenous forest regions, under scientific management, should produce 60 per cent. of the requirements.
2. The State planted forests, under scientific management, should produce 10 per cent. of the requirements.
3. Private forests, shelter belts, woodlots and importation from abroad should produce 30 per cent. of the requirements.

An effort to estimate the existing forest capital of the Dominion is now being made, as already mentioned, and it is hoped that when the state forests are fully developed this capital will be augmented by between 65,000.000 to 100,000,000 superficial feet per annum. In addition it is planned to induce farmers to plant trees on a much more extended scale than in the immediate past and in this way to get a further area of 200,000 acres under forest.

Forest administration organization is taking place in the chief centres of the Dominion. A conservator for forests is being appointed in each district together with the necessary rangers and employees. Demaracation of forests has begun on the West Coast of the South Island and a general reconnaisance is proceeding all over the country with a view of ascertaining the value of the remaining forest areas as climatic and stream-regulative agencies. The headwaters of streams which are largely in forest lands will be protected so as to ensure future water supplies for new cities whenever they arise.

New Zealand aims within the next twenty-five years to have a forest system equal to any in the world and one that will produce all the timber needed for domestic consumption as well as allow for certain exports to Australia which are given in exchange for certain indigenous products there, such as jarrah. Judging by the rapid progress made in the last year or two it would seem as if this aim would be accomplished.

Lumber Will Stay on Free List

Lumber, with the exception of a few varieties, will remain on the free list in the new tariff law, according to a tentative decision reached recently by a sub-committee of the House Ways and Means Committee at Washington, D.C.

This action will be in accordance with the demand of the retail lumber dealers that nothing be done which might interfere with housing construction. The varieties of lumber on which protection will be provided include those which are in keen competition with the product of the West coast lumber industry.

Representative Fordney declared that the House members will not agree to the proposal of Republican senators for the combining of the Emergency Agricultural Tariff Bill, the Anti-dumping Bill and the American Valuation Bill in a single measure. He insisted the Emergency Tariff Bill should stand by itself.

Will Hold Annual Meeting at Sarnia

The annual meeting of the South Western Ontario Retail Lumber Dealers' Association, of which A. R. Sanders, of St. Thomas, is president, and B. F. Clarke, of Glencoe, secretary, will be held at Sarnia on Wednesday, April 27th. It is expected there will be a large and representative attendance as many important matters are to come up and the annual gathering has always attracted representative dealers from various parts of Western Ontario. The South Western Ontario Retail Lumber Dealers' Association has enjoyed many years of expansion and prosperity and was never in a more flourishing condition than it is at the present time.

A Mere Outline Against the Blue Sky

"High Rigger" Performs Many Marvellous Aerial Feats and Seems to Defy Death at Every Move in his Poised Position

By Oswald J. Smith, Toronto

It was a marvelous feat. Even for a "high rigger" it was considered unique and out of the ordinary. Never will I forget the shiver that ran through me as we gazed at that reckless, nerveless, dare-devil figure poised between earth and sky. It was an experience that one is forced to remember.

The tree had been chosen the day before, a great three-hundred foot high Douglas fir, almost five feet through at the base, straight as a die and bare almost to the top. Not an unusual tree, at least for British Columbia, but a tree especially chosen and well fitted for the "high rigging."

The "high rigger," a young fellow about nineteen, with a merry face, a sort of happy-go-lucky expression on his countenance, was the centre of observation for that day at least. After weeks of special practice he had developed into one of the best "high riggers" on the coast.

Springing at the trunk of the tree with spikes on his shoes and belt around his slender waist, he tore up the first fifty feet like a squirrel, and was far above the group of sturdy lumbermen standing round almost before they realized he had gone. Throwing his rope above him, planting his spikes firmly in, with head thrown back, foot after foot he made his way, the muscles of his body readily responding to his every movement.

Was There to do his Best

Up and up and up, higher and higher and higher, not a pause, while the great top of the tree swayed and rocked back and forth under his actions. Our necks ached, our eyes became blurred with the strain, and we lay down on our backs to watch. Exclamations of delight and admiration were heard on every side spurring him on. Spontaneous outbursts of enthusiasm were heralded skyward at every step. No wonder he worked! It was his day, and he was there to do his best.

Presently he stopped. Two hundred feet up! It was enough. Now for work. Wrenching his axe from place in his belt, he began to chop. Round and round he went, swinging back on his belt and taking long, heavy strokes, while a shower of chips rained down on the crowd below.

Two things he must watch, two possible accidents avoid. Should he miss his mark and cut the strap that held him, all would be over. That had happened only the week before on Vancouver Island, and the mangled, crushed body of the careless Finn had been picked up at the foot of the tree two hundred feet below. Then, too, he must be sure that the trunk is well cut all around, lest in breaking the tree should split, and his body be cut in two by his belt as the falling pieces tore away from the rest. That, too, had happened, and its memory was still fresh.

Facing His Real Last Danger

But he was on his guard, and all went well. The top of the tree, cut through, came crashing to earth, causing the lumbermen to spring on either side to avoid it. It was just then that the "high rigger" faced his last real danger. From fifteen to twenty feet the trunk springs back and forth with the vibration when the top breaks. If he is not on the watch he will fail to go with it, and as a result his face will be pounded to a jelly. Never will we forget the incident we heard on the coast of a "high rigger" whose face was broken and beaten into pulp as the tree struck him again and again before he was able to throw himself into motion with it, so violent was the rebound.

Suddenly he paused What now? We had watched him loosen his belt, jerk out his spikes and drop some twelve feet to avoid a possible split, then plant them again, throw himself far back on his belt, brace his feet, set himself and wait, while the great top one hundred feet above his head, cracked, broke and fell. We had seen him like a statue sway back and forth, nerveless powerless, motionless, until the mighty vibration ceased.

And now by all the laws of the "high rigger" it was his business to go to work and make ready the rigging. There was the iron pulley, weighing five hundred and fifty pounds, that must be hauled up by the "donkey" and hung on the top of the tree. Through this, the big cable, an inch and a half thick, must be passed, and the other end fixed to a similar tree nearly a quarter of a mile away. Along the cable the logs, great, mighty giants, not the tooth-picks of Northern Ontario, must be hauled, sometimes lifted clear up in the air. Truly, there was much to do. But he didn't do it. Instead, he did a thing that made him the talk of the woods for months after.

Now, the diameter of the tree at the place where it had been cut was just two feet.

Poised Between Earth and Sky

He had paused. We waited, and the next moment—did we see a vision? Were our eyes deceiving us? No, there he was, poised between earth and sky, standing upright on a twenty-four inch tree trunk, two hundred feet above our heads.

We held our breath. There was a hush on the crowd of reckless lumberjacks as with upturned faces they watched the fearless "rigger." Save for the heavy breathing not a sound was heard. My heart thumped madly, then almost stood still, while a cold shiver left me weak and trembling, yet fascinated, I could not withdraw my eyes.

There he stood in unmistakable outline against the sky. Would he fall? Could he balance long enough to regain his position? Presently he lifted his axe, three feet from where the limb of another tree swayed back and forth in the breeze. What is he doing? Are his senses leaving him? What madness?

But see! The axe has fallen. The limb has been struck, nay, severed, and hurled to the ground. He bends. Our breath comes in gasps. Slowly his body recovers its equilibrium. And five minutes later he steps firmly and victoriously on the ground, while a great cheer goes up from the excited lumberjacks as they throng around. The "high rigger" has won his spurs.

How to Prevent Wood Shrinking or Swelling

To keep wooden articles from shrinking and swelling when in use, nothing practical has as yet been devised, but a proper application of the following principles, worked out by the U. S. Forest Products laboratory, Madison, will go a long way in reducing this trouble to a minimum:

1. Have the wood at a uniform and proper moisture content before it is put through the wood-working machines. If the wood is too wet, it will shrink; and if it is too dry, it will swell. The response to changes in atmospheric humidity is more rapid when the wood is cut in smaller pieces.

2. Use quarter-sawed lumber if shrinkage across the face of the articles is likely to be serious.

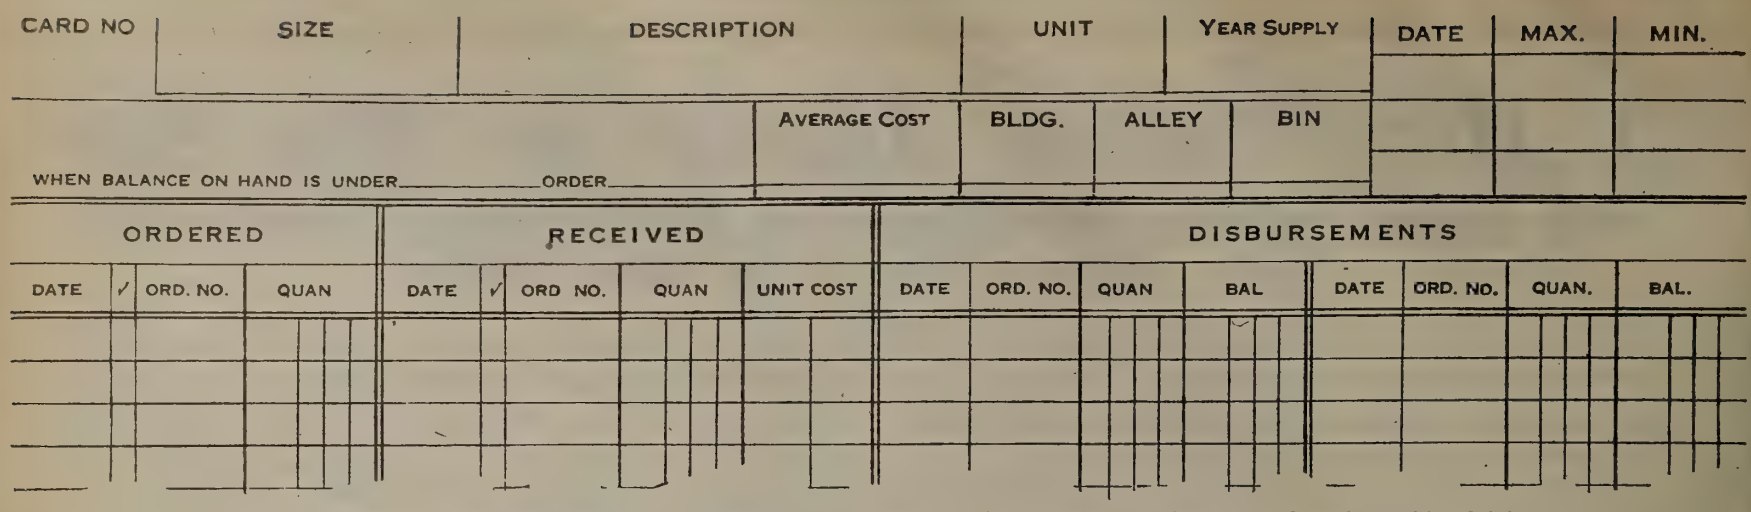
3. If a minimum of change in dimensions is highly essential, use a wood as light as will stand up under the circumstances.

4. Use cross-banded material—that is, veneers glued together with the grain of each layer at right angles to that of the adjacent layer.

5. Under certain conditions it may be practicable to use wood that has been subjected to high temperatures. This reduces the capacity of wood to absorb moisture.

6. Several coats of oil, paint, shellac, varnish, or enamel, or impregnations with linseed oil or pariffin will more or less reduce the change in volume of the wood when it is subjected to variations in humidity for limited periods of time.

7. Insofar as practicable, protect the wood against extremes of atmpospheric humidity during and after manufacture. This may be done in the shop and storage room by installing suitable humidity control apparatus in connection with the ventilating system.



Sample of a very complete perpetual inventory card used by the Spears Lumber Co., Grand Rapids, Mich.

Having Perpetual Stock Inventory

It Enables Dealer to Keep Stock at Proper Level and Tells Him Where He Is At—Detailed Card System

A perpetual inventory system to be successful must give reasonably exact information, it must be simple in form and so designed that it may be operated with a minimum of time and trouble. In other words, the system must be run to benefit the business, not the business run to keep up the inventory system. The simpler the system is the better the results, provided, of course, accuracy is not sacrificed to secure simplicity.

A perpetual inventory system must be fitted to the individual business, says the "American Lumberman." If properly run and designed it will be material aid, but if neglected and not kept up such a system is utterly worthless. One dealer who has a simple system and insists upon its use, turns his stock eight times a year. Of course the perpetual inventory system is not responsible for the turnover of the stock this number of times, but, as the dealer says, it enables him to keep the stock down to the proper level, to buy nothing except what is needed, and it takes all worry off his shoulders regarding the condition of the stock of the company.

A retail business must always be conducted conservatively and this was never more true than it is to-day. To be able to tell how much of each grade, length and width of lumber was sold for any particular year or over a period of years will be a material help in placing orders, particularly if each year a brief resume of the character of the trade is kept. The Spears Lumber Company, Grand Rapids, Mich., has a complete and accurate card system upon which is based the perpetual inventory it carries. The company carefully investigated the requirements of that city and contiguous territory and then determined what woods and what grades were best suited to the needs of the community. The company buys these woods and these grades and no others. Furthermore, it has determined what is the maximum amount of stock which should ever be carried and also the minimum amount. The stock, therefore, is never allowed to exceed the maximum, and when the minimum is reached a certain amount is ordered. A study of an illustration made from a card used by this company will show how the system is arranged. It will be noted that on the card a column is provided for stock that has been ordered, a feature which is very important, especially when orders are a long time in getting through. A card is provided for every item carried and by turning to the card for any particular grade it is possible to tell how much is in stock, where it is in the yard, and what it costs.

Lumber received either by car or returned from jobs is entered in a column headed "Received," while sales are recorded in a column headed "Disbursements." In this column stock used in manufacturing must also be entered as sold, and then credit given the items from which it is made.

A perpetual inventory system when properly kept up will do more than keep a mere record of the stock on hand; it will show what stock is moving and what stock is not moving. It is useless to carry from year to year material which does not sell either because of lack of sales efforts or because it is not fitted to the needs of the community. When an inventory card discloses that certain stock is not moving as it should, the situation should be carefully investigated and steps taken to correct the difficulty with the sales force or the item closed out if it will not sell.

In connection with such a system it is very well worth while to keep a record of items and articles called for which are not kept in stock. Then if these calls are frequent enough a retail company which is keen about increasing its sales will readily know what to do. Of course such cars should not be kept in the perpetual inventory card file.

Retail Lumbermen Real Producers

Merchants in every line of business have often been the objects of attack by demagogues and agitators, who claim they are parasites who contribute nothing to production. The well-known Socialistic theory is that the labor alone is productive.

What a wonderful opportunity the retail lumbermen have to refute this theory, if they will only grasp their possibilities, for they can become producers in the truest sense.

When you sell a farmer a barn that enables him to produce beef or butter fat cheaper, you are adding to production and reducing the farmer's cost of doing business. When you sell him a shed for his machinery or a storage building for his grain, you are reducing waste which also reduces the farmer's cost of production. When you sell a man a chicken house or hog house that enables him to raise eggs or pork more economically, you are again helping him to keep down costs and increase his net profits.

You will notice I have refrained from mentioning building material and I did it deliberately, because too many lumbermen are selling building material and too few are selling buildings. Too many men in the lumber business have allowed their vision to become too cramped, there is no romance in the business for them, they are selling boards and dimension instead of happiness and prosperity, one is sordid drudgery, the other the most fascinating occupation in the world.

As you sit in your office, can you picture in your mind's eye the sort of community your territory would be if every farmer had a good house, a warm profit-making barn, a silo, machinery shed, granary, chicken and hog houses, how much more valuable the farms would be, how much greater purchasing power the farmers would have and how much more money you would be making every year?

There are communities like this to-day and there will be many more of them in the years to come, just how long it will take for your community depends to a great extent upon you and your fellow-lumbermen. Concentrated efforts on the part of the lumbermen could bring about conditions as described above, within the next ten years, while it will take fifty years or more for these conditions to materialize unaided.

A few lumbermen with vision and the courage of their convictions have performed miracles in their communities. They have helped the farmers get better stock and better stock always means better buildings, they have made a study of farming and farm buildings and were able to prevent their customers making serious mistakes in building, they have provided plans, plan books and a dozen other helps for prospective builders and have used advertising to sell their customers what they were able to do to help them.

And these men have made money, lots of it, more than the average retail lumberman is making to-day and their customers are better satisfied than ever with their buildings.

The Ethical Side of Lumber Retailing

By F. J. H.

The successful modern retail lumber business is a science and as such it should be studied and mastered. Its development is conditioned by the same sound business sense as is that of any bank or railroad. The lumber merchant must enter the open market for his stock in trade, where supply and demand govern the price he must pay. He must sell on the same basis and under the same conditions. His business is as complicated and diverse as any in the mercantile world, and well may be the aspirant for future greatness in the retail lumber world conclude to serve faithfully his apprenticeship under the best leaders of the land.

The modern yard should have a neat, well-lighted and well-ventilated office, such as you will find in an up-to-date bank or any up-to-date business. It should be fitted with suitable furniture and an easy chair wherein the tired customer may rest while you figure his bill. A writing table and material should be handy, that he may make out his own bill, if he chooses, or write out his check. There should be no place for the loafer and no inducement to make a smoking room of it should be given or allowed. The floor and the stove should be as free from tobacco spit as that of our parlors; in short, the office should be kept sufficiently neat and clean as would be agreeable to any lady.

We would have all our lumber under cover. This for economy as well as convenience and a trade getter. Any carpenter prefers dry lumber and will buy from the merchant who keeps it dry. The style of the shed must be governed by the location and the taste of the owner.

The stock should be systematically arranged, neatly piled and studiously taken care of. No lumber should be put into the pile until it has been carefully inspected, both as to quality and quantity, and also as to condition of dryness. We have some lumber rot in the pile, for which we can offer no apology. If it is not thoroughly dry it should be protected by extra sticking. The count should be verified and any overage should be as scrupulously reported the same as shortage. If the proper credits for overage are reported we will find less trouble getting credits for shortage.

We would allow ourselves a good salary for our time, take into account all items of expense; allow only such risks as are absolutely unavoidable; exercise every precaution and sound business sense, then add the customary rate of interest and be content. If we want to speculate we should enter other fields.

We seem to be greatly exercised of late over a mail order competition, and are laying all manner of plans to put them out of business. But after a closer study of their methods, the field they labor in and the patronage they receive, we may learn a lesson that might enable us to avoid other evil consequences. They perceived that by buying for cash and selling for cash they could sell at a less profit than could the man that sold on credit. They also saw that if they would buy from the wholesaler and sell direct to the consumer they could make another saving and by dividing their savings with the consumer they could expect his patronage.

Don't forget that the customer, as well as the merchant has become enlightened. He knows the market price of lumber as well as the merchant. The time is past when the merchant can get exorbitant prices undetected for his wares, and when detected he must pay the penalty. The customer realizes he is under obligation to his merchant and is willing to honor this obligation, but he also insists that the merchant is under some obligation to him and we believe a recognition of these mutual obligations would smooth out several rough places in our business life. The trouble with us all, dealer and consumer has been. We are too extravagant. We, as merchants, are too loose in our business methods, too extravagant in our habits, and yet we prosper. The consumer, noting this, sees our habits and evident losses, and sees that we prosper, and naturally figures it out that he is paying for it. Can we wonder that he turns away from us and buys where he can buy cheapest?

Recognizing the right to all the trade we can get, we should not forget the right of others. There are business ethics which prove a good investment. It does not pay to antagonize trade naturally belonging to other territory. It does not pay to cancel an order given and accepted in good faith simply because we learn that the goods could have been bought a little cheaper elsewhere. It does not pay to have the reputation of being tricky. It does pay to give value received for what we sell.

It does pay to insist that our goods be up to the grade. It does pay to discount bills. It does pay to be wide awake and looking for opportunities to improve our business.

Albert Brix, president of the Brix Lumber Co., Portland, Oregon, passed away recently. Mr. Brix was well-known in the lumber industry and highly esteemed.

Largest Load of Team Hauled Logs

The world's record for the biggest load of logs ever hauled by a team of horses is claimed on behalf of Fred and Harry, two horses owned by the Shives Lumber Company of Campbellton. This team of sturdy young Clydes, each weighing more than 1,800 pounds, a few days ago hauled a load containing 330 logs scaling 16,349 feet and weighing, it was estimated, thirty-five tons. They hauled it over a quarter-mile logging road from Two Brooks camp, on the Upsalquitch River, Restigouche County, to a landing on the river bank. The previous record is said to have been held by an Ontario camp where 306 logs were hauled in 1920. The lumbermen went out to break the record and piled up logs until they were fourteen feet high. It required every chain in the camp to hold the logs in place. Eric M. Banford, a government surveyor, scaled the lumber, as did John Farrah, a company scaler. James Cornhill, of St. John, checked the other men's figures and John Redfern, a Dominion commissioner, for taking affidavits, took pictures of the load and went over the calculations with the surveyors.

Paper From Southern Pine and Red Gum

The possibility of using southern pine and red gum for the production of high grade book and magazine paper has been demonstrated in recent tests at the U. S. Forest Products Laboratory, Madison, Wis. The experiments indicate that one cord of loblolly pine and one of red gum are together capable of yielding one ton of paper, at a cost which would allow a good profit under prevailing conditions. The utilization of southern pine for this purpose would also spread the burden of the pulpwood supply over considerable territory, which has a large annual growth of timber.

Book paper requires for its manufacture two kinds of wood, a long-fibered wood, such as spruce, to impart strength, and some short-fibered hardwood to give the formation, finish, and other printing qualities. The southern pines are long-fibered woods, excellently suited for the manufacture of wrapping paper and fiber board, but their pitch content and the difficulty of bleaching them have heretofore been obstacles in the way of their use for white paper. These obstacles, it has been shown, can be overcome in a large measure by proper cooking conditions and improved bleaching methods. Red gum is typical of many southern hardwoods that might be used with the pine for the manufacture of the better grades of printing paper.

Chief Forester Will Pay Visit to Sweden

Mr. Piche, chief forester of the Quebec Department of Lands and Forests, will leave with the chief forester of Ontario and a party of representatives of the Canadian Pulp and Paper interests for Sweden on the 21st of April. Mr. Piche and party are going to Sweden to observe and study the methods of forest protection in that country; their means of protection against forest fires and the system carried on in regard to reforestation, and gain knowledge in general as to the preservation of forests in Sweden. They will remain in that country during the months of May and June to master the details of forestry engineering, management and forestry work in general, for which Sweden is famous.

A convention of Quebec forest engineers was held in Quebec on March 30th to consider forestry management and formulate plans for an inventory of Quebec forests, the growth of trees, and classification of lands made necessary by the law passed in the last session of the legislature respecting the future functioning of the Departments of Colonization and Lands and Forests that necessitates plans and surveys for the separation of lots, etc.

Invited to Compare Lumber Values

The members of the newly-formed Niagara Peninsula Retail Lumber Dealers' Association have started an active campaign to meet mail order competition. The first of a series of these ads. is now appearing in the weekly newspapers in the different towns.

The initial one reads as follows:—Lumber Mail Order Competitions.—We can supply you with building materials at prices which compare favorably with mail order houses. You have the additional advantage when buying at home of inspecting the material you buy. Come and look over our stock and compare values.

Mr. Hadley Enjoying European Outing

W. A. Hadley, of Chatham, Ont., who is a former chairman of the Southwestern Ontario Retail Lumber Dealers' Association, is now on an extended European tour in company with Mrs. Hadley, and in a letter to the "Canada Lumberman," says that they are having a very delightful trip. They have seen the Mediterranean ports, the Riviera and early in March were in Italy. Mr. and Mrs. Hadley will visit Switzerland, France, England and Scotland before returning home. They expect to be back in Chatham early in May.

The new kraft pulp plant of Clarke Bros., Limited, at Bear River, N. S., which has just started operations, the first cooking of the pulp taking place this week. Clarke Bros., who are widely known lumbermen and woodworkers, say that the original capacity of the mill was thirty tons daily but this has been almost doubled with little extra outlay.

Western Sawmills are Putting on Bold Front

While Trade is Not Active the Majority of Plants on the Coast are Operating—Some Anomalies That Do Not Just Coincide with Preconceived Ideas

By George S. Perry, Vancouver

There may be few encouraging features in the present market outlook for the lumber industry, but most of the mills are carrying on, and to say the least are putting a bold front on the situation. They all admit that there is a dearth of business and that they do not expect any sudden revival. The trade with Eastern Canada is not yet picking up to any great extent, and what shipments are being made are for the most part in square timbers. There is a certain activity in the Japanese export trade for square timbers, and this has been gaining in volume for the past month. Apparently the lumber trade in the Flowery Kingdom is quick to nose out a bargain, and the prices they have been getting on timbers are very much a gift—this applies more particularly to the prices the mills on Puget Sound have been quoting, for in line with what seems a sort of established rule with the Washington mills, they are offering at what seems in the B.C. market ridiculously low quotations. That is stopping some of the business being placed on this side, for the mills here will not meet the Washington mills. As a matter of fact the latter have been taking on business in "Jap. squares" which they would like to pass on to someone else—and there have been some efforts to replace them here, but with little success.

Export of Non-Creosoted Ties

The only export business of any dimension placed in the present year, is an order for 8,000,000 feet of ties for the Egyptian State Railways, which was handled through the Canada Overseas Trading Company, Ltd., a new concern in export lumber, whose London office secured the placing of the order. The business is for non-creosoted ties, in contrast to the British and Indian railway tie orders.

Another feature somewhat unusual in the export of timber, but one which will become more familiar if export is to expand, is that the specifications are given in the metrical system, Egypt following European practice in regard to that. This first order of railway timber for Egypt is liable to be followed by others if the business is handled satisfactorily. Through Mr. B. C. Keeley, manager for the C.G.M.M., two steamers of that line have been fixed for the order. The first to load is the Canadian prospector, which has just completed taking on about half a million feet at Fraser River, from the Canadian Western Lumber, Bucklin and Brunette mills. After taking on consignments from various mills in Burrard Inlet, the Prospector goes to Vancouver Island to complete her cargo of four million feet at Genoa Bay. The entire order is to be despatched by April 28th, and as the mills are for the most part operating and with no serious press of other business, there will be no delay. The Indian tie order, secured some months ago by the H. R. Macmillan Export Co., Ltd., has been cleared off the sheet by the departure of the U. S. Shipping Board steamer, West Hartland, which carried a large cargo of lumber, only part of which was creosoted ties for India.

Car Trade is Not Brisk

It may seem anomalous, in the face of statements evidently well-founded, that the lumber business, especially in the car trade, is very dull, that the majority of the mills in British Columbia are not operating. But the fact remains that they are. On the Island a few of the larger mills are not operating, but they are getting ready to. The big Chemainus mill of the Victoria Lumber & Manufacturing Company has been doing some extensive overhaul work, and is now preparing to go in commission. The Cameron Lumber Company at Victoria may not run yet for a time, but the majority of the others are operating. The same is true on the coast mainland. All the mills in Vancouver district, practically, are operating, with the present exception of the Vancouver Lumber Company. On the Fraser River, the big mills at New Westminster are running, the last to open being the Brunette. In the interior, according to Mr. H. H. Ross, a recent visitor to the coast from the Mountain district, the mills of that association to the extent of at least 75 per cent. are now cutting. Mr. Ross stated that most of them were working on railway tie orders which the association was fortunate to secure some time ago for spring delivery. With that exception, however, the Mountain mill men assert they cannot agree with coast and Washington State quotations in any rail market they can reach.

Another anomaly, which is striking, but which is undoubtedly evident, as far as coast mills are concerned, is that very few of them have any large surplus of yard stock. In fact, a rapid view of the storage space at any of the big mills in vicinity of either Vancouver or New Westminster, shows more bare sticks than lumber piles. There is a partial explanation in the statement that, though running more or less steadily, few mills are being operated to capacity. That has prevented them piling up as much as otherwise they might have done, and though business has been very light all winter, and extremely light in comparison with active seasons in the immediate past, there has been enough lumber shipped out and sold locally to reduce the yard stock in most concerns. Some of the mills are, in point of fact, rather poorly sorted for stock, which has been a stimulus to cutting. The log situation has not materially changed for some time. A few operators have opened up in a limited way, and there are just about enough logs coming in from coast points to keep up the supplies to the mills. There is no surplus in storage. The price has shown little tendency to drop, and until it does the demand will not be keen. In fact the mills consider that with low prices and dull market, coupled with high freight rates on one side and stiff log prices on the other, they are between the devil and the deep blue. The shingle mills claim they cannot sell their stock on a basis of replacement of logs and bolts to break even, or come near it, at present prices, which do not show much tendency to inflate, for the same conditions are ruling in the shingle market as obtain in the lumber market.

An Aggressive Shingle Campaign

With Mr. Fred H. Lamar in the saddle as the new secretary of the Shingle Association, the B.C. shinglemen are looking forward to the preparation of an aggressive campaign, which will put them back on the map when business gets into full swing for the 1921 season, though Mr. Larmar warns them that insofar as the prairie trade of Western Canada is concerned, there is not going to be any very active demand this year for either lumber or shingles. That is in contrast with the cheering news just received from Winnipeg that the building show staged in the prairie capital has been a signal and unexampled success, and that building activity has been greatly stimulated thereby. The fact is there are so many "anomalies" and "unusual" conditions in the whole industrial situation, both west and east, no one is safe to prophesy the trend of affairs a week in advance. That is certainly the situation in the lumber industry out west. It may be a trifle too Asquithian to suit the impatient energy of the west, but the temper of "Mr. Ultimate Consumer" is still very evidently to wait and see.

New Officers of N. B. Lumbermen's Association

At the annual meeting of the New Brunswick Lumbermen's Association, which was held in Fredericton recently, while the members of the old Executive were re-elected, it appears there was a change in the offices of president and vice-president.

F. C. Beatteay (Stetson, Cutler & Co.), St. John, N.B., was chosen president for the coming year, and J. W. Brankley (Miramichi Lumber Co.), Chatham, N.B., vice-president. In the report, which appeared in our last issue, it was stated that Donald Fraser, of Plaster Rock, N.B., president for 1920, had been re-elected to that office, and that Wm. Richards, of Campbellton, was made vice-president for another year. The "Canada Lumberman" regrets the error, to which its attention has been called, and hopes the new president and vice-president will have a prosperous and successful year. Both Mr. Fraser and Mr. Richards are members of the Executive for 1921.

How Pulp and Paper Exports Grow

Comparative statement of value of pulp and paper exports for first six months of fiscal years 1918, 1919 and 1920 should read as follows:

	1918	1919	1920
Paper	$21,821,915	$27,119,246	$43,025,764
Chem. pulp	15,903,189	14,008,388	33,579,554
Mech. pulp	2,512,086	2,618,338	10,638,158
Totals	$40,237,191	$43,745,972	$87,243,476

Exports for the first six months of 1920 were about 105 per cent. greater in value than were those of the corresponding period of 1918.

Ottawa Reports Decline in Prices

Due Largely to Quiet State of Trade and Rather Uncertain Building Outlook in That District

A reduction in the price of many grades of lumber which has been looked forward to for several months, occurred in the Ottawa lumber market during the opening period of April, when white pine in some grades dropped as much as eight dollars per M., and spruce and lath prices also softened. The drop did not affect the better grades of white pine, and with only one exception good pine sidings and strips remained firm as to price. There was no change in the price of red pine.

The drop in price, manufacturers said, was due largely to the small volume of business that has been done during the last five or six months, and the still uncertain outlook as to building. What prices will be asked and charged for this year's cut when the sawmills open up, are highly problematical. In some cases, the Canada Lumberman is given to understand, manufacturers may hold out for an increase over last year, but it is doubtful if they will get it, unless there is a great revival of building activity.

With the pine grades the trade is confident that they will yet hold their own and prove to be again the salvation of the spruce market. It is, however, hard to see where the prices of the grades affected can go back to where they were for a considerable time, if at all.

Taken all in all, the outlook as to building this spring is disappointing. Last fall and winter it was thought and confidently predicted that the month of April would show an awakening of the market. Instead of these hopes being realized the opposite is the case. There is all kinds of need for commercial and housing space, but the prospective builders will not take a chance with the unsettled labor market.

Manufacturers, wholesalers and retailers were all watching the situation as regards labor very closely. Some of them predicted that the next thirty or sixty days would witness the crisis of the lumber trade from a sales end at Ottawa. They figure it out first last and all the time on the attitude of labor.

In some usually well informed circles it has been heard that the prospect of a general strike in the building trades is not unlikely to occur on May 1st. The issue this year is the question of reduced wages.

During the second week of the month, the Building Trades' Council at Ottawa suddenly swung around and by a majority vote decided on the principle of individual instead of collective bargaining. This means that the members of the local branch of the Canadian Building and Construction Industries, who sent an ultimatum to the Council that it stood for individual bargaining between the different trades in the association with the crafts of the Council, have won out. The correspondent of the Canada Lumberman has been given to understand that while the vote for individual bargaining was a majority one that it was not by any means unanimous.

The past and future status of labor has, beyond all doubt, been the chief factor in the slackening of the local market.

"If trade keeps up as it has been since the beginning of the year the lumber manufacturers and the wholesalers will soon pass into bankruptcy. Business? Why, there isn't any, nor there hasn't been for several months," was the heated reply of one manufacturer when he was asked by the writer as to what business prospects were. This manufacturer now takes a right about face to the attitude which he prophesied six months ago would be happening now.

Others of the trade who founded their hopes of good spring business are slowly, but surely, passing down and out. Still, even facing a falling market there is in some circles the faint rumbling of sound faith that somehow or other things will work out all right and the high priced stocks which have been carried over will be sold.

"There is no use grouching. It will not get you any sales. Keep smiling and carry on," was the comment of one of the more optimistic manufacturers.

Both domestic and United States orders and inquiries sagged away behind. Scarce would hardly describe them, because, as some of the trade said, "there are not any." Any there were, were few and very far between and for small lots.

The woodworking factories continued to operate on a part time basis, but the future is very doubtful. The coming sawmill season presents the same aspect and some mills may not operate. From what one can hear in the trade there is certainly going to be a considerable come down in wages. One press report said the Gatineau Company Limited would reduce wages 15%. Inquiry by the writer of an executive of the Riordon Company Limited which controls the Gatineau Company Ltd., showed that no definite programme of reduction had been decided upon up to April 10th.

The indications are that there is going to be a cut in sawmill and factory workers wages. It is the extent rather than the principle that is in doubt.

The export situation to Europe did not brighten. The period of the year was favorable for the opening up of business, but on top of all the other numerous difficulties which have presented themselves, comes along the miners' strike. Local opinion was that if the miners' strike in Great Britain lasted for any great length of time, that it would have a very serious effect on this year's lumber trade with Canada.

Rail transportation remained good. Cars were plentiful. Shingles were slow, but firm in price, and pulp logs it was intimated would shortly show a decrease in price.

Breezy Happenings From New Brunswick

Northumberland County lumbermen suffered a heavy loss within the last few days as a result of a large boom in the Southwest Miramichi breaking away on the night of April 3 and over 1,000,000 logs started with the rush of waters down the river towards Chatham. Owing to vast quantities of ice floating in the river the logs got mixed up, making salvage conditions extremely difficult. The sight from the shore was said to be wonderful as the vast quantity of logs swept down the river in the grip of the swift current. David Howe, of Newcastle, went out to salvage a large raft. A line that he had secured the boat to the raft parted and the former was carried away, leaving him stranded on the logs. Two boys went to his rescue in a punt and brought him back safely, although there was great danger from the floating ice. The logs were owned by nearly all of the mill owners along the Miramichi. Later reports said that the outlook was excellent for the recovery of the greater part of the logs. After reaching a narrow place on the river near Middle Island, just below Chatham, they jammed against an ice field. Every available man was out salvaging and it is reported that the boom company is offering twenty cents per log. If the ice field holds for a few days it is felt that the lumber interests will be saved a heavy loss.

* * *

Recently a fire completely destroyed a lumber mill at Manzeis siding, about eleven miles outside the city of Fredericton. It was owned and operated by Howard Dunphy, Nashwaak Village. The fire was discovered by a little girl who informed her father, and he spread the alarm. The rosser and the rotary were destroyed but the engine was saved. There was no insurance on the mill or machinery.

* * *

Considerable interest was manifested by lumbermen throughout the province in the sale of the property of McIntosh Bros., a large lumber firm of Bathurst, which assigned on January 17. The planing mill property at West Bathurst was bid in by John MacIntosh for $6,400, in addition to the mortgage and liens against it of $9,300, making a total of $15,700. A rotary mill and 200,000 feet of logs went to E. J. Palmer for $2,500, as did a tract of lumber land. The smaller parcels of property brought good prices. It is said that operations will be resumed in the near future. The liabilities of the concern were said to be about $75,000.

* * *

Elwood Burtt, president of the E. Burtt Lumber Company, announces that his employees have accepted the company's proposals for a ten-hour working day and a reduction of fifteen per cent. in wages.

* * *

The International Timber Workers of America branch in Fredericton announce that they will contest a return of the ten-hour day.

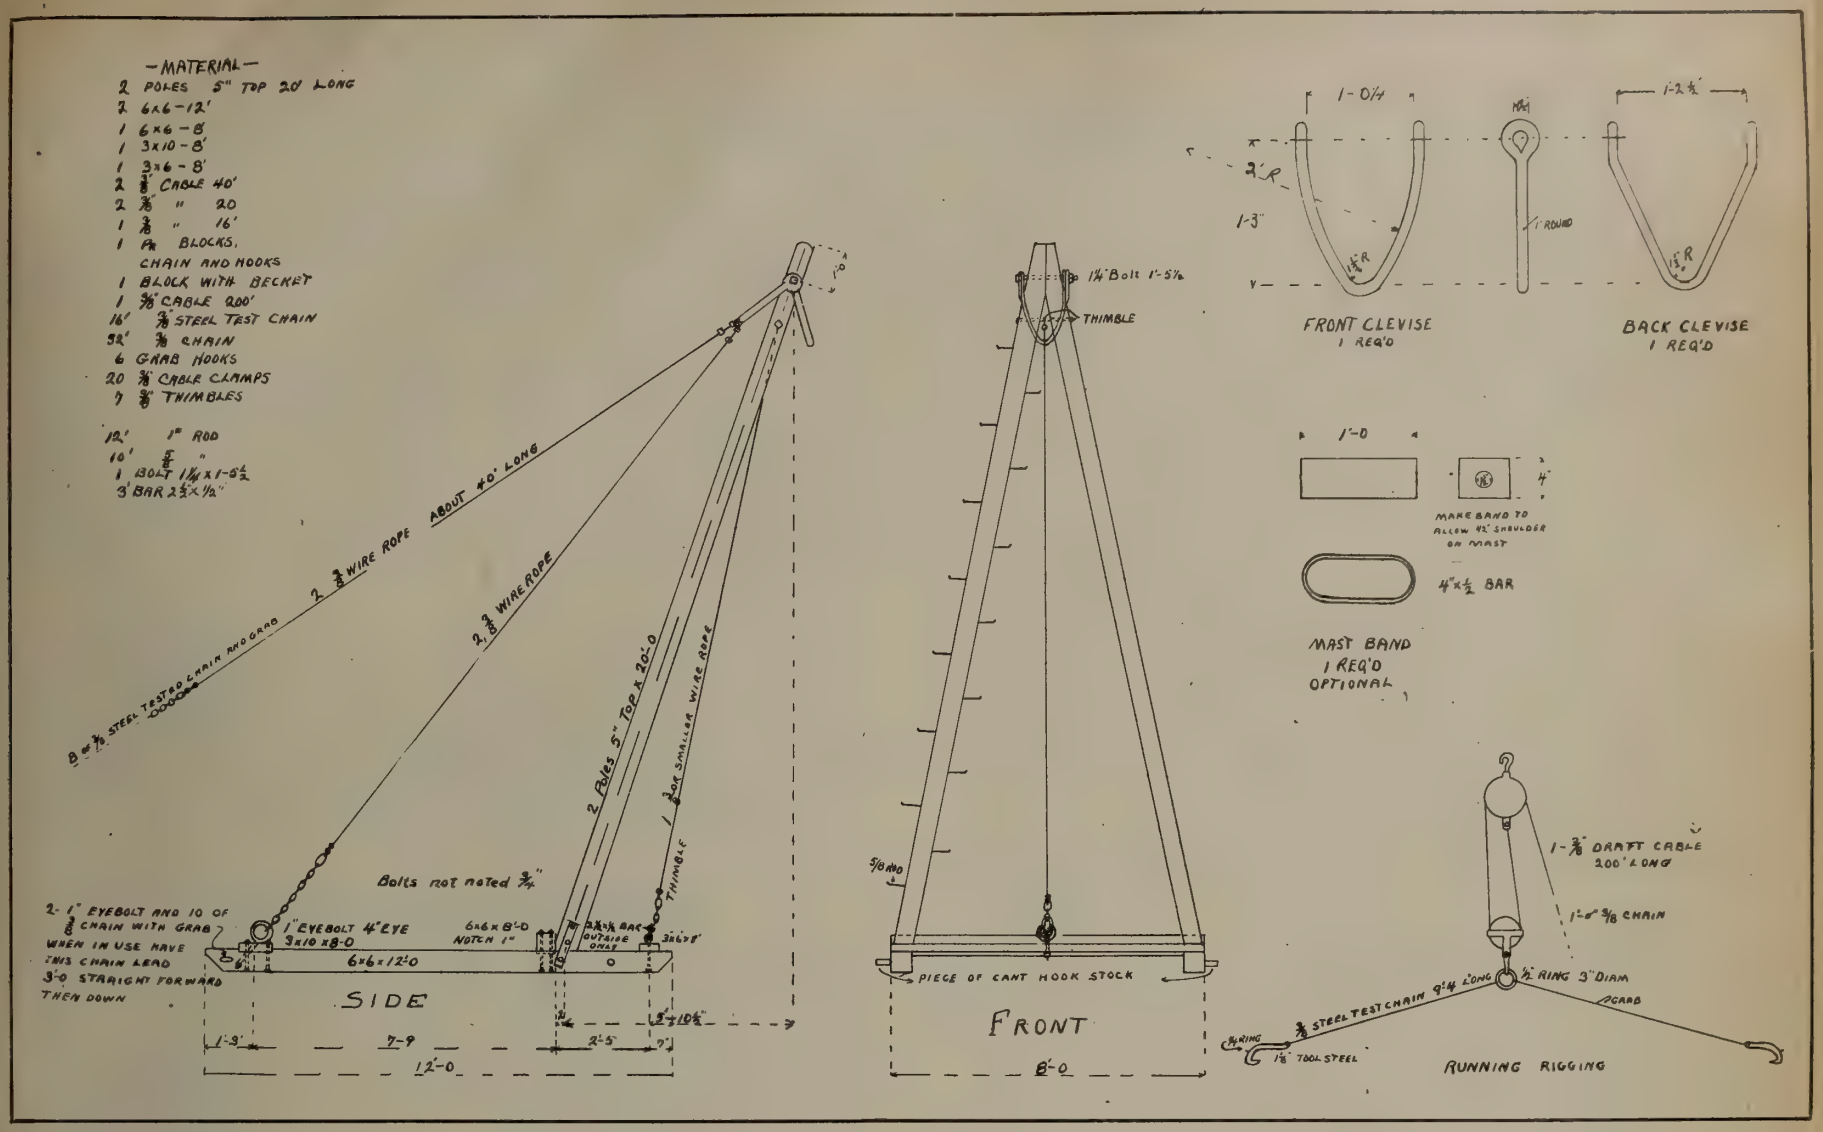
* * *

When the ice gave way recently in the St. John river two booms were carried out, but so far they have not been recovered. The tugs Helen Glasier and Flushing opened navigation on the main river a few days ago and reached the capital. They had not noticed the sheer booms on the way up. Owing to the ice jam still holding the tugs have been unable to start the season's operations at the booms.

About one-tenth of the lumber trade with Latin-America is with the West Indies. "Lumber trade" in this connection means not only timber and boards, but such manufactured articles as doors, shooks and house finishings.

The forest area of Cuba is estimated to be about 50 per cent. of the total area of the island.

Cuba has about 367 varieties of excellent hardwoods. Besides mahogany and cedar, there are about 30 species of palm. The royal palm is probably the most useful tree on the island, every part from leaves to roots being utilized by natives.



Employing New Type of Log Jammer

The accompanying illustration gives a splendid idea of a log decker or jammer which is used by Caleb Loud, lumberman, of Detroit, in his operations in Michigan, both in making small log piles and in larger ones on the lake shore.

Mr. Loud explains that in the latter case the jammer was placed on top of the pile and, at this elevation, it worked as well or better than did those with a boom. In regard to the operation of the jammer, Mr. Loud says, "Its cheapness allowed us to have several and as a result we could work on several skidways during the day without incurring the equipment. The advantage of this is quite apparent when one sees the teams come in bunched, and we are able to unload quickly, due to the big capacity of vacant skids. In my memorandum book I find tallies running from 230 to 420 logs per day with the usual run of 300, and the motor power was a Novo gasoline hoist."

By Motor Truck and Sleigh to Mill Yard

W. J. Foster of North Bay, who for many years has been a well-known lumberman in the Nipissing District, was in Toronto recently calling upon his friends in the trade.

Mr. Foster operates a circular sawmill at Wasing, 27 miles east of North Bay on the Canadian National Railways. Wasing is located in Chisholm Township and the surrounding bush is largely of mixed timber, principally hardwoods. During the season just closed, Mr. Foster and his son, J. L. Foster of Toronto, conducted an interesting operation, with the results of which they are well satisfied. It consisted of hauling logs from the "topping off place" by motor truck and sleigh to the mill yard, 3½ miles distant. Two trucks were used, one of which was a Sawyer-Massey five-ton truck. As much work was done with the two trucks in hauling logs as could be carried out with six teams of horses. The timber drawn was principally birch and maple, and the diameter of the average log was about 15 inches. Some, of course, were much larger and some smaller. From 8 to 10 logs would be placed on the truck in order to get traction, and about 22 to 25 logs on the sleigh. Ten trips were made daily with each truck, while with a team only three could be made.

J. L. Foster looked after the operation of the trucks and sleighs and is pleased with the economy, rapidity and efficiency of this new method of bringing logs to the mill. There are some rather heavy grades to go over, but with the experience gained this season, it will be possible next year to build ice roads so that the hauling will be more expeditiously done. Mr. Foster has taken as much as 10 cords of pulpwood by means of a truck and two sleighs, two cords being loaded on the truck, six cords on the first sleigh and two on the second. About half a million feet of logs were drawn to the mill during February and March and the cost was much lower than by horse haul, besides, as already stated, being more quickly carried out.

The sawing capacity of Mr. Foster's sawmill in Wasing is about 20,000 feet a day, and the output has, for a long period, been purchased by Hart & McDonagh of Toronto.

In addition to running a sawmill, Mr. Foster for several years successfully conducted a farm, and is now the owner of the North Bay Garage. He also took out quite a large quantity of pulpwood during the past year, and about 5,000 hemlock and cedar railway ties.

Economic Use of Tractor in Log Hauls

The St. Maurice Paper Company of Montreal have recently completed a test of tractor efficiency in the movement of logs at their operations carried on at St. Donat—which is located 35 miles north of St. Agathe des Monts, Quebec.

The test was carried on over woods road newly opened during the past season and over a governing grade of 18 per cent. It was found possible to continually move three trailers over this four-mile route and move 180 logs in each trip. With a minimum of four round trips a day, this made a total of 720 logs daily. By this schedule, 4,320 logs weekly could be planned on.

It is estimated that one machine and three trailers to each train (9 trailers in all) can do the work accomplished by twelve teams of horses. The trailers used were not special equipment and were made by the St. Maurice Paper Co. in their own blacksmith shop at St. Donat. They are the conventional heavy duty sled such as manufactured by the Adams Wagon Co. at Woodstock, with only slight changes made for purposes of proper tracking with tractor on curves.

During the entire test the tractor was operated by one of the employees of the St. Maurice Company. The St. Maurice Paper Company have placed an initial order for one of these machines.

The Man Who Has Tided Us Over

By G. R. Wells

Man from time to time has been enabled to so order the state of affairs that he or some few select ones are in a position to command not only the attention of their less fortunate fellowmen, but also to eliminate them entirely in business activity.

Even so, the poor wholesaler has ofttimes been consigned to more torrid regions where he would know neither snow nor cold. But he, like the cat, through some unforeseen agency, lives on.

Let us all remember this—The wholesaler is a very necessary evil.

You, who have for so long been held with nose to the grindstone and have been unable to forget business cares to close on the last day of the week for even a brief spell of four hours.

You, who have so often purchased your lumber from the traveller, only to have the order cancelled, so that the wholesaler could resell at a greater margin of profit and have then left you in the lurch. Please remember.

He who runs may read; but do not in endeavoring to read, forget the time when an extra thirty days with the two per cent, (not beer) was ofttimes a friend indeed.

Then who was there to tide you over an occasional spot of extra hard sledding, and with his lumber and time added to the due date of the drafts, enable you to smile once more and look forward to the day when we as wholesalers could be eliminated and the government would be the agency from whom you would buy your requirements.

Of course since we handle the long end of the deal and not the stock, we must be prepared to step away from our position and with open arms allow all the wild harum scarum schemes, which anyone may devise, be put in our stead.

In dealing with profits, it has been stated that as retailers, you require thirty-three and one-third per cent. of a gross profit. Assuming all things equal, may we as wholesalers accept even one-half or one-third as great a profit?

Well, enter the game and the fields far aways will not appear to such an advantage as they apparently do now, if one may judge from the sayings of those who are ever ready to voice an opinion ruinous to the wholesaler, but which is calculated to bring a greater profit to themselves. Yet how long is it since the same wholesalers were friends indeed to them.

In conclusion, let us remember it is the time of year when peace and goodwill ought to prevail; and only by the closest harmony can we one and all hope to succeed in weathering the present storm of unrest. Therefore, let us remember to have more charity towards the poor unfortunates called wholesalers.

Death of Esteemed Eastern Lumberman

John Kilburn, a well-known lumberman of Fredericton, N.B., passed away recently at his home in that city in his 79th year. He suffered a stroke of paralysis in 1919 which partially deprived him of the power of speech and rendered him almost helpless. Mr. Kilburn was born in the parish of Kingsclear, within fifteen miles of his late home, and spent the greater part of his life in that section. For upwards of forty years he carried on lumbering operations on the upper St. John waters, employing a large force of men and cutting annually from 10 to 15 million feet of logs. He personally took charge of his own driving operations and, up to two years ago, he continued in active business. Mr. Kilburn removed to Fredericton twenty-one years ago and played an important part in the industrial development of the capital city of New Brunswick. In conjunction with his brother-in-law, the late O. M. Hartt, he founded the Hartt Boot & Shoe Company. He also played an important part in the reorganization of the John Palmer Company. Mr. Kilburn is survived by his widow and one son, Wardlow S., of Fredericton.

Lumber Exports Almost Doubled

Statistics compiled on the lumber exports from British Columbia for the seasons 1919 and 1920 show an increase for 1920 over 1919 of between twenty-five and thirty million feet, bringing the total season's export by water to over 20,000,000 feet.

During the past season a total approximating 90,000,000 feet was shipped through Vancouver from mainland points, which was about 30,000,000 feet in excess of the 1919 shipments.

A rough total of this year's exports set the figure of 89,792,241 feet, divided as follows:

	Feet
Australia	29.791,173
Orient	22,745.696
India	3,800,000
United States	2,300,000
United Kingdom	30,346,372
South America	1,079,000
Total	89,792,241

Fly Wheel Flew in all Directions

A rather unusual accident occurred at the sawmill of Thurston-Flavelle Lumber Co., Port Moody, B.C., when the huge flywheel of their engine, which weighs about six tons, broke, scattering the fragments in all directions. One piece, weighing 500 lbs., was sent through the roof of the two-storey building and embedded itself in some timber over 60 feet away. The plant was in operation at the time of the accident and a number of men were engaged nearby, yet, luckily, all escaped without injury. The loss entailed will amount to about $10,000. Gangs of forty men have been engaged to work three eight-hour shifts in an attempt to repair the building and instal a new engine and equipment with as little delay as possible.

How Quebec Paper Exports Have Risen

Some striking figures, submitted at the annual meeting of the Quebec Board of Trade, held a few days ago, are illustrative of the rapid growth of the paper trade in the province. John Theodore Ross, the retiring president of the Board, stated in his annual address, that the exports of the city and district of Quebec to the United States, according to the official report of the United States Consul at Quebec, had been:

1911	$4,530,329
1914	10,302,932
1917	23,213,846
1920	40,842,124

This remarkable result is attributed to the fact that, some years ago, the merchants of Quebec had the enterprise to build two local railways through the spruce forests, to the water powers of the Saguenay and the St. Maurice, which caused the erection of pulp mills and paper mills, employing thousands of men, and creating a trade, the importance of which may be measured by the above figures.

Personal Paragraphs of Interest

Lawrence Stark has joined the staff of salesmen of the Canadian General Lumber Co., Toronto. He was formerly with the Hocken Lumber Co., and latterly with Thomas H. Hancock.

Alfred E. Read, of Read Bros., Toronto, accompanied by Mrs. Read and family, are spending a few weeks at Daytona Beach, Florida. Mr. and Mrs. Charles P. Read, of Toronto, are also enjoying a holiday in the Sunny South.

H. J. Mackin, assistant general manager of the Canadian Western Lumber Co., of Fraser Mills, B.C., spent a few days last week in Toronto and other points in Ontario with E. C. Parsons, the eastern representative of the company.

Mr. Patterson, of the Patterson Lumber Company, Port Hope, Ont., has just returned from a combined pleasure and business trip to the Pacific Coast, where he visited the lumbermen of Vancouver and enjoyed the balmy March climate of the coast.

A. M. Knox, who has been in charge of the Vancouver office of Knox Bros., wholesale lumber dealers, has gone to the company's head office, Montreal. He expects to be absent from the coast for two months or more, and while east will look after the firm's re-sawing plant at Levis, Que. It is the intention of this firm to handle a large quantity of lumber by water shipment via the Panama Canal from the coast this year.

Pulpwood Prices May Be Lower

Recently a large Ontario firm which annually contracts for several thousand cords of pulpwood stated that practically all plants were supplied with wood at present and no one is in the market for the commodity. Ontario shipments are well cleaned up and very little unsold wood is on hand. The 1922 season will open in May and what is being shipped out now is on the present year's contracts. New contracts will not be made until after May 1. In the opinion of some, present appearances indicate that the coming season's price will be at least ten per cent. under those prevailing during the past season.

A number of firms, who last year contracted for several thousand cars of pulpwood to be delivered on contract to various mills, have not entered into the purchasing game so far this year, in view of the uncertain outlook and the fluctuating character of the demand.

From the east word comes that pulpwood is likely to increase in value as the summer months roll round, but this is regarded in Ontario as more or less of a conjecture, as it is impossible to predict with any assurance just what is likely to happen, so far as the requisitions are concerned.

Guatemala and Honduras are rich in woods and timber. The forests are practically untouched because at present inaccessible. Lumber is largely sawed by hand. During 1919, $87,000 worth of lumber was imported into Guatemala, most of it being southern pine flooring and dimension lumber.

Lower Wages and Longer Hours Down East

When the sawmills in Eastern Canada resume operations for 1921, it is probable that wages will be reduced for rough labor on the average from 15 to 20 per cent., and that those plants which last year granted their employees a nine-hour day will ask them to go back to the old-time schedule of ten hours.

Word received from Fredericton and other points in New Brunswick says that the mill proprietors there as well as elsewhere have announced their intention of returning to a ten-hour day with a reduction in wages of not less than 15 per cent. It is stated, in eastern labor circules, that the resumption of the ten-hour day will not be received with favor by the operatives. Local No. 120 of the International Union of Timber Workers—the men affected—have passed a resolution unanimously objecting to the proposal and the Fredericton Labor Council has also passed a resolution of protest and resolved to "resist to the limit of its power the introduction of the aforementioned conditions." The opinion was expressed in labor circles that the workers would be more willing to accept a cut in wages than to return to the ten-hour day, but the lumbermen and mill owners are said to be insistent upon a return to the old working schedule.

The Gatineau Company of Ottawa also announced recently that the general scale of their wages for the coming season would be reduced from 15 to 20 per cent. This company, which includes both the W. C. Edwards Company of Ottawa, and the Gilmour-Hughson Co. of Hull, state that such a course has been chosen in preference to the only alternative, viz., closing up the yards and mill. Business throughout the winter and particularly of late has been so slack that the company have found themselves unable to operate at the present scale of wages.

In an interview S. C. Thompson, manager of the Gatineau Company, said the United States market had been hard hit by the adverse exchange rates and high freight, and very little building was going on in Canada, so that the market was very much below normal. Some step was necessary to reduce costs and encourage building. Mr. Thompson added that he thought the employees of the Gatineau Company would not be dissatisfied with the wage reduction, as it was not out of proportion to the reduction in the cost of living.

Elwood Burtt, of Fredericton, N.B., president of the E. Burtt Lumber Company, who operate a mill at Cardigan station on the Gibson branch of the C. P. R., announced lately that his employees had accepted the company's proposals for a ten-hour working day and a reduction of 15 per cent. in wages.

The mill, it was said, would open on the new basis at once and will probably cut between 3 and 3½ million feet of logs this season, this being the amount of old lumber carried over from last season. The company carried on no logging operations during the past winter because of the market situation.

Mr. Burtt, in making the announcement of the acceptance of the longer working hours and reduced wages, said there was not a dissenting voice among the company's employees. "The men said they expected some such action would be necessary," said Mr. Burtt, "and they appeared to be ready for it. There is not a better crew of men in the whole world than we have at our mill."

The Chatham Gazette reports that none but monthly employees reported for work at the J. B. Snowball Co.'s mill at Chatham when it started operations on a 10-hour day.

Essentials to Genuine Building Revival

Lower costs and increased production are needed immediately if building is to be carried out to any large extent, according to John C. Howell, of the Brookmire Economic Service, New York City.

"The nearness of the active building season increases general interest in the degree of building activity which may be witnessed this year," he stated. "Interesting statistics are being compiled and published with purport to show the extent of building necessary to approximate a normal supply, carrying the inference that such programme implies a pressing demand, especially in housing.

The crowded condition of cities, emphasizing the grave menace to health and social well-being which such crowding threatens, is urged as a reason why an expanding building programme must be undertaken. Without doubt such conditions exist in many places and call for rapid remedial measures. Many expedients, plans and even laws are being urged to induce a building programme which may relieve the gravity of prevailing conditions in congested centres.

It does not seem likely, however, that this year will see the completion or even the inception of a building programme at all commensurate with the need rather than the demand induced by current conditions, and this even though some discounting of interest advocates be made.

There are a few weighty reasons for this opinion. Viewing the situation generally conditions are scarcely as blank as they are painted. There are at least four interested groups in any building programme undertaken.

1. The building material producers and distributors.
2. The investors, whether private individuals or banking institutions investing in mortgages.
3. The building contractors.
4. The tenants.

The building material producers and distributors are naturally anxious to get building started, but tend to obstruct such starting through the susceptibility of prices to advance on any active buying. This process tends to force buyers out of the market.

The investor is not yet fully convinced that the time is opportune for even moderate investment in building enterprises, especially houses, either for sale or rental. In consequence his attitude is one of waiting for still more radical readjustment of costs of construction and the assurance that investments can be made with a reasonable certainty of fair returns on outlay.

The building contractor is still confronted with unsteady and fluctuating prices, making it difficult to figure costs which are likely to hold throughout the period of a contract. This fact operates seriously to retard the planning of contracts for immediate building.

The tenant is confronted with the necessity for economy due to the decreased income and the necessity of paying in appreciation money the bills incurred with inflated money. Many are faced with the possibility of increased rentals this spring and must seek cheaper quarters than those at present occupied. Many must give up housekeeping altogether. The great body of tenants must and will seek lower rents.

The material producers and distributors must practically guarantee lower and steadier prices, based on lower production costs and increased production, as the first step toward an active and sustained building programme.

Meantime contemplated building figures on all building in the United States as of January 1, 1921, amount to $117,152,000, against $192,848,000 as of January 1, 1920, while figures on contemplated residences for January, 1921, amount to $18,860,000, against $26,724,000 for January, 1920.

While general conidtions are slowly improving, considerable time must elapse before all the factors which control the situation are favorable for the prediction of a steady and sustained rise in building activity.

Montreal Trade Looks for Improvement Soon

The Montreal market continues very dull—so dull in fact that many in the trade are wondering when there will be a change. The fact has to be faced that so far the volume of business and the trend of prices have not come up to the expectations of the majority of lumbermen. Business is being conducted by many firms at a loss, and the stock offered by manufacturers often does not represent the cost of production. While this is not an encouraging picture, wholesalers as a rule express a belief that there will be an improvement in the near future.

Apart altogether from the building situation, the poor demand is accentuated by want of orders of local factories turning out general commodities and who in the usual way are fair consumers of lumber.

Building, up to the present, has proved a disappointment, but there are indications that the position will improve. The question of the extent of the programme will depend to a certain extent upon labor. The unions state they will not accept wage reductions, but against this must be set the fact that hundreds of men are being employed at rates below the union schedules.

During March the building permits totalled $559,155, a decrease of $288,092. For the first quarter of the year the value was $1,742,715, a gain of $281,478 over the corresponding period in 1920.

The export season is now open, but exports are almost nil—and what is more, the prospects, in view of the condition of the U. K. markets, are far from bright.

Mr. R. H. Lightburne, representing the Associated Importers, of London, England, has been on a visit to Canada, with a view of disposing of the remainder of the stock of spruce purchased by the Associated Importers from the British Government. The stock is now in the Maritime provinces. Part of the original block has been gradually sent to the United Kingdom, but it was hoped to sell the balance—reported to be about forty million feet—in Canada. Nearly 17,000,000 feet have been purchased by H. Peladeau, Limited, and smaller blocks have been disposed of. It is understood, however, that the balance has been withdrawn from offer on this side, owing to the condition of the Canadian market. When it became known that Mr. Lightburne was here on a selling mission it was feared by some that the entire stock would be dumped on to this market, and that prices would be still further depressed. There were also reports that the stocks to be disposed of ran into hundreds of millions of feet.

Personal Paragraphs of Interest

George Gray, wholesale lumber dealer of New York City, was among recent visitors to Toronto.

Wm. Stewart, of the Union Lumber Co., Toronto, is spending a few weeks in Florida and Jamaica.

E. H. Lemay of Montreal, who has been ill for a considerable time, was successfully operated on at the Victoria Hospital.

A. B. Davis, sales manager of the Ross-Saskatoon Lumber Co., Waldo, B.C., was among the business visitors to Toronto and other eastern points during the past fortnight.

Alexander MacLaurin, vice-president of the St. Maurice Paper Company, Limited, Montreal, has returned to business after three weeks' illness.

J. A. Rowland, general manager of the Sprague-Rowland Lumber Co., Winnipeg, Man., spent a few days in Toronto recently, calling upon the trade.

F. W. Adolph, general manager of the Adolph Lumber Co., Baynes Lake, B.C., was in Toronto recently calling upon the members of the trade.

Harry B. Miller, of New York City, who has been part of the organization of Edward Clark & Sons, Limited, Toronto, for some years, is now covering Ontario in the interests of the firm.

C. W. McCabe, of Toronto, Ontario, representative of Campbell-McLaurin Lumber Co., Montreal, who was confined to his home with illness for the past four weeks, is now able to call on the trade again.

Wm. Myers, who spent several years in the cooperage business, has purchased a block of land on the old belt line railway in the vicinity of Bathurst St., Toronto, and intends opening up a retail lumber yard.

A. S. Nicholson, managing-director of Terry & Gordon, Limited, Toronto, who recently underwent an operation in the General Hospital, Toronto, is able to be around again and is much improved in health.

Alex. Fenton, assistant sales manager of the Riordon Sales Co., Montreal, was in Toronto lately and paid his respects to a number of friends in the industry.

J. L. Campbell, of Campbell, Welsh & Paynes, Toronto, and his brother, Joseph Campbell, of Winnipeg, manager of the Trust & Loan Co. of Canada, have gone on a six weeks' pleasure trip to Great Britain and the Continent.

H. P. Rowles, sales manager of the Duncan Lumber Co., Limited, Vancouver, B.C., is spending a few weeks in Toronto on business and calling upon the trade. He will also visit a number of Ontario towns and cities in the interests of his firm.

J. H. Dansereau, lumber merchant, Montreal, is president of the Business Directory Service, Ltd.; J. O. Brouillard, M.P., lumber merchant, Montreal, is vice-president; and D. H. Pennington, lumber merchant, Quebec, is on the directorate.

W. Frank Oliver, of the Oliver Lumber Co., who some time ago underwent an operation in the Toronto General Hospital and later, with Mrs. Oliver, spent a few days at Atlantic City, is able to be around again and resume his position on the road.

Frank Hawkins, of Ottawa, secretary of the Canadian Lumbermen's Association, had the misfortune to meet with a bad fall recently when leaving his office. He fell heavily on a step and received a severe shaking up which confined him to the house for some days.

R. H. Hamlin, general manager of the Empire Sash & Door Factory, Winnipeg, Manitoba, has been recently elected director of the Western Life Assurance Company. Mr. Hamlin has been closely connected with civic and the business life of Winnipeg for a number of years.

F. W. Ritter, who for some years was manager of the North Canada Lumber Co. at Prince Albert, Sask., has been appointed secretary of the Western Retail Lumbermen's Association in succession to Fred H. Lamar and has entered upon his new duties with headquarters in Winnipeg.

Fred N. Waldie, of Toronto, president of the Victoria Harbor Lumber Co., and Mrs. Waldie and family, who have been spending several months in Bermuda for the benefit of Mr. Waldie's health, returned home recently. Mr. Waldie is feeling much better as a result of his sojourn in the sunny South.

The staff of the R. Laidlaw Lumber Co. held a most enjoyable and successful dance at Hunt's, 786 Yonge St., Toronto, on March 29th. The company included some former employees of the firm and the reunion was the first one that has been held in a number of years. Gilbert Watson's orchestra provided suitable music.

Chester H. Belton, of the R. Laidlaw Lumber Co., Sarnia, Ont., and George H. Belton, of the George H. Belton Lumber Co., London, Ont., have returned from an extended trip to British Columbia in which they visited many of the busy lumber producing centres. In an interview, published in a western paper, both gentlemen expressed themselves as quite optimistic in regard to a revival in business as soon as there was a decrease in the excessive freight rates that have been prevailing on B.C. forest products from the Coast to Ontario and the East.

R. A. Long, chairman of the board of directors of the Long-Bell Lumber Company, Kansas City, Mo., will sail from New York on the SS. Aquitania, May 3 for an extended tour of the British Isles and the continent. The trip will include visits to England, Ireland, France, Belgium, Holland, Switzerland and Italy and possibly Germany.

C. A. Larkin, for many years president of the C. A. Larkin Lumber Co., Limited, who retired from business during the war but resumed operations some months ago under the name of the C. A. Larkin Co., has removed his office from 71 Bay St. to 630 Confederation Life Bldg., Toronto. Mr. Larkin is specializing in all lines of Canadian softwoods.

Isaac Hale, who represents the Edgecumbe-Newham Co., Limited, of Vancouver, specialists in fir, cedar and spruce lumber and red cedar shingles, has arrived in Toronto and opened a sales office at Room 402, No. 9 Wellington Street, East. Mr. Hale has been engaged in the marketing of B.C. forest products for many years and is favorably known to leading interests in the east.

Edward Clark, of Edward Clark & Sons, Toronto, who has been spending the past winter at Los Angeles and Santiago, in California, has returned home. While away Mr. Clark met a large number of Canadians who were wintering in the sunny south, and among those with whom he spent a few days was Hugh Munro, lumberman, of Toronto, who is at present at Hollywood.

John Waugh, who for half a century has been in the retail lumber business in Niagara Falls, Ont., and is still going strong, was in Toronto lately calling upon the trade. For many seasons Mr. Waugh has taken the first boat out of Port Dalhousie for Toronto at the opening of navigation and he is generally on the final trip. It is never too early or too late for Mr. Waugh to enjoy a sail on the steamer "Dalhousie City."

Roch Julien, wholesale lumberman, Quebec City, has just returned from an interesting and extended European tour. The industry abroad, according to Mr. Julien, is recovering slowly but surely from the nervous strain to which it has been subjected during the last few years. Buying is proceeding cautiously, but shows signs of improvement. On his return journey Mr. Julien made a tour of the battlefield area in France and Belgium.

G. C. Piche, chief forester for the province of Quebec, will sail toward the end of April to study forestry conditions and methods in Europe. There will be other members of the party from the different provinces and the delegation will visit Sweden when a complete survey will be made of the scientific methods employed there for the conservation of forests as well as the manufacture of all kinds of wood products. At present the Quebec Government is defraying the expense of four forestry engineers who are studying in different parts of Europe.

J. R. Booth, the Lumber King of Ottawa, on April 5th, observed the 94th anniversary of his birth, and received congratulatory messages from many points in Canada and the United States. Mr. Booth was the recipient of a bouquet of 94 beautiful roses, one for every year of his life, from the members of the office staff and the superintendents of the Booth plant. The veteran lumberman has been ill for some time but is improving and was able to sit up for several hours on his birthday. Owing to his indisposition there was no celebration at his home. Mr. Booth came to Ottawa in the early fifties and shortly afterwards laid the foundation of his great lumber, pulp and paper enterprises which are known throughout the world.

J. W. Brankley, general manager of the Miramichi Lumber Co., Chatham, N.B., who was nominated some time ago by the New Brunswick Lumbermen's Association as their representative on the Forest Advisory Commission of the province, to succeed the late D. J. Buckley of Newcastle, N.B., has been officially appointed a member of the board. This appointment is an important one and the choice just made will certainly meet with the approval of the industry as a whole. Mr. Brankley is a member of the executive of the New Brunswick Lumbermen's Association and is favorably known throughout the Maritime provinces. He is also a member of the Canadian Lumbermen's Association and an enthusiastic supporter of the interests of lumbermen in general. Not only is he general manager of the Miramichi Lumber Co. but also the Dalhousie Lumber Co., which organizations are subsidiary ones to the International Paper Co. of New York, and between the two they control from 800 to 1,000 square miles of Crown timber limits in New Brunswick. Mr. Brankley is the representative of the timber licensees of the province on the Forest Advisory Commission.

Pulpwood and Its Varied Activities

Pulpwood Should Stay Right in Canada

It is stated that over 30,000 cords of pulpwood were cut and shipped during the past season in and around Pembroke, Ont. Almost the entire production outside of a few carloads, which went to certain Ontario points was exported to the United States. It is stated that from the Gatineau and Perth districts a like quantity of pulpwood has also gone over to Uncle Sam's domain. The 30,000 cords, together with the shipments to Canadian points, represent an expenditure of, approximately, $1,000,000 in the districts named, while Pembroke's share, counting the cargoes of spruce wood sent to J. R. Booth, Ottawa, is easily half a million dollars. This sum is expended largely among the farming community. The average price paid per cord was $14.00, and it is estimated the figure showed a satisfactory profit to the producer.

Speaking of the pulpwood operations in the Pembroke district, the "Pembroke Standard" offers the following pertinent comment: "We have always understood that this great natural resource was being rapidly rendered extinct, through no organized attempt at replacements, the lack of system in cutting and forest fires. When it is considered that this district and two adjoining sections alone furnish 60,000 cords of pulpwood for export across the line, taking the province as a whole, the quantity exported must reach colossal figures. What a pity this product could not be converted into paper in Canada. Are our manufacturers falling down on the job? The Yankee paper makers pay high freight rates, high prices for the raw material, a host of other incidental shipping expenses incurred in handling this bulky product, and still make immense dividends for their shareholders. All this money should remain in Canada and the conversion into paper of this great national asset should furnish employment for Canadians.

Grinding Spruce Logs Into Pulp

For many years there has been so much more profit in grinding spruce logs into paper pulp than in sawing them into lumber that the pulp and paper mills in Maine have multiplied while the sawmills have almost disappeared, says the "New York World." The price of lumber has reached such altitudes this year that the sawmills would be the greater money-makers if only they could get logs to saw. However high the price of print paper may have mounted, spruce lumber at $65 to $68 a thousand feet looks good in comparison and, furthermore, it costs a good deal less to saw a log into lumber than it does to make it into paper.

Spruce pulp wood, that used to sell at $4 to $6 a cord, now commands as high as $21. Two cords of four-foot pulp wood are equal to 1,000 feet of lumber, board measure, and that would make the price of logs $40 to $42 per thousand feet, a price which the sawmills could well afford to pay with lumber at $65 to $68, and every thousand feet of logs sawing out 1,100 to 1,250 feet of lumber, owing to the difference between boom scale and lumber scale. In the old days the mill operator who paid $10 to $12 a thousand for his logs was glad to get $14 for his lumber.

Millions might have been made this season on the Penobscot in sawing logs into lumber, were the mills in existence that once lined the banks of the river, and log supplies were available; but long ago the big pulp and paper concerns drove the sawmills out of business, first by bidding up the price of logs to a figure that lumber manufacturers could not afford to pay, and finally by buying up most of the choice timberlands.

Spruce stumpage that in the 80's sold for $1.25 to $2 per thousand feet is quoted now at $5 to $8, prices that lumber manufacturers have been unable, until very lately, to pay, and now that most of the sawmills are gone, the paper mills have the market to themselves.

Good Progress in Kapuskasing Mill

Good progress is being made in the new town of Kapuskasing by the Spruce Falls Company in connection with the erection of their sulphite pulp mill. Reports were recently sent out from the works that the company was curtailing operations and that many men were leaving that district. These reports are misleading as it is only laborers who have been employed in cutting pulpwood that have departed.

The new sulphite pulp mill of the Spruce Falls Company, which will have a maximum capacity of 120 tons, is moving steadily towards completion. The buildings are all up, and the machinery is in process of installation and it is hoped the mill will begin operation by July 1st. Of their entire requirements of pulpwood for ten or twelve months, which have been taken off their own limits, the company purchased only a limited amount from the settlers.

The sawmill of the Spruce Falls Company has a capacity of 35,000 feet per day, and has been cutting up lumber for construction requirements. The company intend erecting a groundwood pulp mill but have deferred that enterprise for the time being and so far have only done preliminary work on their power plant.

The Spruce Falls Company are, however, quite optimistic regarding the future and intend to go on with the other projects as soon as the "feeling of pessimism which seemingly is ruling the world today is over."

British Columbia's Future as Pulp Province

Speaking before the Canadian Credit Men's Trust Association in Vancouver recently, A. E. McMaster, secretary-treasurer of the Whalen Pulp and Paper Co., gave an instructive and interesting account of the development of the pulp industry in the province and the vicissitudes that attended the early days which opened with the granting of pulp leases back in 1901. Explaining the delay in such development by the lack of capital and the methods employed, the speaker traced the history of the properties at Swanson Bay, Bella Coola, Powell River and Quatsino.

It was with a spirit of optimism that Mr. McMaster pointed to present-day figures, which had climbed far above previous totals in production. The newsprint output of British Columbia for the past year alone, he said, had been 142,000 tons. Approximately there were six billion feet of growth annually in British Columbia, and of this two billion was cut or destroyed, leaving a balance of four billion feet, half of which might be claimed as suitable for pulp. Briefly, he calculated that the mills might take eight times their present figure without causing any depletion.

There were so many enquiries from the eastern United States coming in, added Mr. McMaster, owing to the depletion of forests, that there could be no doubt many big business concerns were looking to British Columbia, and he declared that within ten years that if he were on hand he would be able to say "I told you so," regarding his general optimism.

Pulpwood Market Is Not Brisk

It is reported from Northern Ontario that the demand for pulpwood is very light at present and those who have wood to sell are more anxious to get rid of it than they are to hang on to it. A year ago when pulpwood was commanding all kinds of prices, everybody got into the business and there was an over-production; then the prices began to fall and have been going down ever since. A leading Ontario operator stated that there were vitually no current quotations at the present time, and nominal prices for woods from points south of North Bay f.o.b. cars, are: rough spruce $11 to $11.50 per cord; spruce (peeled) $18; north of North Bay the pulpwood is of somewhat better quality than south and, of course, the freight rates are higher. The average price for rough spruce is $10; peeled spruce $16 to $17; poplar $9. A number of firms who last year contracted for several thousand cars of pulpwood to be delivered on contract to various mills, have not entered into the purchasing business this year at all, in view of the uncertain outlook and the fluctuating character of the demand.

St. Maurice Company Makes Fine Showing

One of the most satisfactory annual exhibits recently disclosed by Canadian industrial enterprises is embodied in the statement now in the hands of shareholders of the St. Maurice Paper Company, Ltd., covering the twelve monthly period ended December 31 last. The company, which is a subsidiary of the Union Bag & Paper Company, ranks among the younger ones of the pulp and paper industries, but from the 1920 showing it would appear that the five years of its existence have been characterized by a growth of a somewhat phenomenal nature. Gross profits for the year, comprising operating earnings and income from miscellaneous sources, including that accruing through the existing high rates on New York funds, amounted to $2,976,636, or more than double those of the preceding period, when the total reached $1,418,804, the actual gain being $1,557,832.

The balance sheet section of the statement discloses a position of exceptional strength, net current assets at the end of 1920 being

upward of $3,300,000 against slightly under $2,450,000 in last year's showing. Inventories and expenditures on logging operations totalled $2,863,689, an increase of nearly $400,000 over the 1920 figures, while bank loans, appearing at $475,000 in the 1919 statement, find no counterpart in the 1920 figures.

Properties, timber limits, equipment, etc., are shown in the statement under review at $8,053,038, net additions during the twelve months involving an outlay of $1,002,850. The capital stock of the company was, as stated elsewhere, increased from $5,000,000 to $7,899,900, the change in this respect being due to the distribution of the 30 per cent. stock dividend and the exchange of all but $47,000 of the outstanding bonds, shown a year ago at $1,440,000 into the common stock of the enterprise on a par for par basis during the year.

Believes B. C. Timber Supply is Limited

In a letter to F. J. D. Barnjum of Annapolis Royal, N.S., R. W. Hibberson of the Ryan, McIntosh Timber Co., Victoria, B.C., says:

You in the East, are looking towards British Columbia for your future supply of timber, and I am afraid that the bulk of the lumbermen do not realize how little timber we really have in British Columbia. Our firm for the past seventeen years has been examining timber in British Columbia, examining some four hundred to five hundred square miles per year, and incidentally travelling over a tremendous acreage of adjacent timber lands.

Our filings have shown conclusively that our timber wealth has been greatly exaggerated; and whilst we have ample supply for present needs, ten or fifteen years hence, will see, in our opinion, the beginning of a timber famine.

We have come to the conclusion that British Columbia will be called upon to supply a large proportion of the needs in the very near future. Our pulp supplies are very limited; as you know a large proportion of our timber in British Columbia is Fir and Cedar and only on the West Coast of Vancouver Island, the Queen Charlotte Islands and the North East portion of Vancouver Island hold any large pulp supplies; the timber in these districts being chiefly Hemlock and Balsam, or as it is called on this Coast, Larch. There is little Spruce on the Coast of British Columbia, the bulk of our Spruce being in the Northern Interior.

Large Revenue Derived From Forests

The important part which the lumber indusrty plays in the revenue of the Province of New Brunswick was emphasized by Hon. Dr. J. E. Hetherington, the Provincial Secretary-Treasurer, in his Budget speech. He expects a decrease in the revenue for the coming year, due to the conditions of the lumbering industry which had brought about a much smaller cut of logs on the Crown lands, which would have precipitated such a reduction in the territorial revenue that the province would be faced by a huge deficit if it had not been that the increased stumpage rates, now $5.00 per thousand feet, were effective during the cutting season of the past winter.

In connection with the forest revenue, a table was presented, showing that New Brunswick, with an increase of 100 per cent. as compared with 1919, had made a bigger advance than any other Lumber is largely sawn by hand. During 1919, $87,000 worth of cent., while Quebec showed 28 per cent., and Ontario 50 per cent., while it was shown that New Brunswick's loss from forest fires on Crown lands had been approximately $90,000, as compared with $390,000 in British Columbia; $350,000 in Quebec, and $290,000 in Ontario.

Use of Pitch Pine for Paper Making

In the House of Commons at Ottawa recently Hume Cronyn, member for London, appealed for the carrying out of plans for the National Research Institute as a first step toward the intelligent development of resources. People all over Canada are demanding it. The honorary Advisory Council for Scientific and Industrial Research had reported in favor of this institute, and the House had adopted the report, but nothing more had been done. As an instance of the work which could be accomplished through research, Mr. Cronyn instanced the fact that a pulp mill had found a means of using pitch pine for the manufacture of paper. Previously when this pine was mixed with spruce it had caused heavy losses to the manufacturers. The discovery of methods of using this pitch pine had increased the pulpwood resources of the Dominion by from 25 to 40 per cent. Mr. Cronyn made a personal appeal to Sir George Foster to give his attention to the proposed bill to provide for the Research Institute.

Wood Regulations Governing Quebec Lands

A bill was recently passed by the Quebec Legislature providing for the separation of lands from the Department of Crown Lands, and placing them at the disposal of the Department of Colonization. The bill declared that letters patent must be issued three years after the issuing of a location ticket for lands upon which there was no wood of commercial value. It was pointed out that cordwood might be left on land, and that it was the intention of the Government to issue letters patent for wood containing no timber. The clause was accordingly amended.

Another amendment was added, which extends from five to six years, the period within which the improvements made by the settler after getting his location ticket cannot be seized. Hon. Mr. Perron put in the amendment, but said he was opposed to it. He said that it was the wish of members for colonization districts.

Hon. Mr. Perron also inserted another amendment specifying that the new conditions created by the present act will not apply to lands for which letters patent had been issued before 1909. The old conditions would apply to these lots.

Hon. Mr. Kelly made certain suggestions on behalf of the lumber merchants, whom, he thought, were not well treated by the new law.

Hon. Mr. Perron assured him that the lumber merchants would not be badly treated by the Government. He recalled certain crying abuses of certain lumber merchants who had speculated on lots. He said that the lumber merchants would get all the justice which they were entitled, but not more.

What Forests Mean to Any Country

Mr. Avila Bedard, assistant chief forester of the forestry branch of the Quebec Department of Lands and Forests, and professor of the Forestry Engineering Faculty in connection with the Laval University, is a firm believer in the education of the Canadian youth in the public as well as private schools and colleges regarding the value of Canadian forests. Mr. Bedard is losing no opportunity to propagate his ideals. On April 6th, he gave an interesting lecture in Quebec under the auspices of the Society of Arts and Science on the subject of Canada's forests, their influence on rivers, land cultivation, vegetation and industry, and welfare of the nation in general. In the course of his lecture he showed that in lands everywhere where reforestation is taking place on a large scale, the inhabitants in these countries have been obliged to emigrate or else remain to spend a great amount of money to better their living conditions, which had been made difficult through forest depletion. In some instances those inhabitants have been obliged to modify their system of agriculture with plans for substitutes. These changes, said Mr. Bedard, are being wrought by climatic modifications. In other countries to preserve vegetation and staple crops in general against the prevailing winds, they have made extensive plantations of wind breaks. Such plantations have been carried out individually, not only in foreign countries, but also in the Canadian western prairies. The depletion of forests, not only in a number of other countries but in our own, contribute to the irregularity of the river flow, which causes great damages to properties that parallel these rivers during the spring and fall floods and interferes with the production of electricity and the continuity of manufacture capacity.

In the province of Quebec many rivers, such as the St. Maurice, the Chaudiere, St. Francis, etc., have maintained their importance, one for the purpose of navigation and the others from the standpoint of log driving, aided by dredging and building of dams. This has taken place since agriculture and pasturage have replaced on the slopes and on the crests of the mountains in the forest country. Even without all these works of dredging and draining, the navigation is intermittent on the St. Maurice between Grand Pils and La Tuque, and the other rivers mentioned where log driving has become more and more difficult, lengthy in time and in consequence more costly on account of forest depletion and its influence on the depth and volume of waters in the rivers, deprived of their shade protection and absorbed by the heat of the sun.

Mr. George Chahoon of the Laurentide Pulp and Paper Company, Limited, made a statement before the Waterways Commission, in which he said that in 1911 two million logs, which represented the cut of that season, took such a length of time in their drive to get them to the mill, owing to the scarcity of water in the River St. Maurice, his company had to pay $19,000 in interest alone on account of this delay. He said that a great many of those logs had been water-logged by the length of their stay in the water, and owing to these conditions, the company had to keep tied up $330,000 plus the interest. Besides the company was obliged that year, in compensation for the delay in delivery and deterioration of the logs in the drive mentioned, to purchase 12,000 cords of pulpwood delivered by rail.

Mr. Bedard referred to the conditions in the Orient by the depletion of forests and alluded to Dalmatia and China, where the people engaged in agriculture, are suffering from arid land on account of the absence of forest protection, and their desertion of the land in consequence.

The speaker touched upon the influence of the woods on the flow of springs, and consequently on the supply for the larger watercourses, which, naturally, connects itself with the general question of the

action of the forest on the humidity of the ground, and the special condition of the woodlands, as affected by snow and frost in the winter of excessive climates, and its important bearing on the superficial hydrology of the earth.

Mr. Bedard impressed upon his hearers the essential necessity of educating the Canadian youth as to the value of Canadian forests and their protection, and the necessity of placing in the schools text books dealing with this very important matter.

Pulp Manufacturers Adopt Precautions

A number of the pulp and paper concerns in northern Ontario, who are contemplating making extensions this year to either their plant or buildings, have deferred any schemes for the present until conditions become more settled and a greater feeling of confidence prevails.

Speaking of the outlook, a representative of a northern firm stated recently: "As a matter of precaution until things are fully adjusted it is not proposed to carry out our full programme of forestry organization or for that matter of plant development. When we get back to old-time and normal conditions, I feel sure that matters will go on in a way that will be worth while. I am still an optimist. I think, because I have lived long enough to be able to use my experience in forecasting the future, and I believe that a great future exists for the aggressive pulp and paper enterprises of the north which are fundamentally sound in every respect."

Must Come to Canada for Cedar Poles

American telephone and telegraph concerns must now come to British Columbia for their cedar poles and the Kootenay country will supply 200,000 of these during 1921, according to J. S. Deschamps of Rossland, B.C. Mr. Deschamps is a lumberman on a large scale in the interior.

"Idaho, Washington and Montana have practically stripped their forests of red cedar poles suitable for this class of work," he said. "It behooves British Columbia to conserve her pole supply as much as possible. With the American competition practically done away with, the price of these is bound to go up. The Americans must have them, and they must come to us for them.'

During the past few months Mr. Deschamps has shipped several hundred carloads of pulpwood to the paper mills at Spokane. This is the first occasion upon which paper concerns in the American Northwest have had to come to Canada for their pulpwood supplies. Pulpwood is getting scarcer in the States, Mr. Deschamps says, and an increasing amount is likely to find its way across the line.

The cut of logs during this winter has been up to normal, he says. Just where the lumber that will result from these logs will be sold, Mr. Deschamps is not prepared to state. No one, he says, can accurately forecast what will happen in the lumber business this year. The lumbermen of the interior are optimistic enough, however, to keep their camps going all winter in the hope of the market improving.

Airplanes Saved 35 Million Dollars

Airplane patrols guarding the U.S. National forests during the season of 1920 saved approximately $35,000,000 worth of standing timber. Between 900 and 1,000 fires were reported from a few airplanes lent to the Forest Service by the Army Air Service. Most of the forest fires were extinguished by ground forces directed from the air. It is pointed out that the timber thus saved from destruction is worth more than the total Army Air Service appropriation for the fiscal year.

During the last season army pilots assigned to the Forest Service patrolled the national forests of Oregon and California.

If the Department of Agriculture secures favorable action from Congress regarding the recommendations made in the summer of 1920, the aerial forest patrol will be extended to include all national and private timber lands in the United States. The Air Service desires to give further aid and the Operations Group has recommended that five squadrons be made available for duty with the Forest Service.

Although Forest Service reports have for some time urged immediate action, Congress appropriated in 1919 only $50.000 for aerial forest patrols, which sum was not even sufficient for providing hangars, repair shops of personnel. All these were lent to the Forest Service by the Army Air Service and the Army pilots and observers were paid out of the Army appropriation, for their work on behalf of forest conservation, although this appropriation in itself was inadequate for our national defense.

The Department of Agriculture estimates that 100 airplanes in daily service would keep the Pacific Coast forests safe from fire, an area which contains 52 per cent of all the timber in the United States. As fires destroy approximately $20,000,000 worth of lumber each year, not counting the damage done to private property, the eagerness of the Forest Service to be permitted to use airplanes is readily appreciated.

Justifies Export Duty on Pulpwood

The Canadian Pulp & Paper Association has issued a bulletin entitled "What the Pulp & Paper Industry Means to Ontario," being a summary of an address delivered recently before the Forestry Club of the University of Toronto, on March 5th, by Edward Beck, of the Canadian Pulp & Paper Association, Montreal.

The following excerpt from Mr. Beck's remarks are particularly timely and will be read with much interest:—"Canada can find ample justification in American tariff legislation for an export duty on pulpwood, even if it were not absolutely justifiable from the standpoint of self-preservation. We cannot afford to permit the continued deviation of a million to a million and a quarter cords of pulpwood to other countries at the rate our own supply is diminishing and especially when such deviation contributes nothing to our revenues applicable to forest renewals. The time is not only approaching but is already here when forest culture becomes a serious issue. The people are being educated to the necessity of providing for the future. The provincial governments everywhere are alive to the situation. They are willing to go as far as they believe their means will allow them and popular opinion sanction. The private industries dependent upon the forests are eager to co-operate in any sane and reasonable plan that will ensure a continuity of the supply of their raw material. Two things are still necessary: One, that of providing the means; the other that of devising the proper methods. The former, I reiterate, is a task for the Government. The latter will become the duty of those trained in the science of forestry and prepared to devote a lifetime to its development."

Review of Empire Timber Exhibition

The Forestry Branch of the Department of Interior, Ottawa, has recently issued an interesting circular, entitled "The Empire Timber Exhibition," giving a splendid review of the exhibition which was held in London, Eng., in July last and was organized by the Exhibitions Branch of the Department of Overseas Trade, assisted by a committee composed of representatives from all the British dominions. The context in the recent publication is from the pen of W. Kynoch, superintendent of the Forest Products Laboratory of Canada, Montreal.

Too Much Timber Off Public Domain

The sixtieth annual report of the Department of Crown Lands of New Brunswick which was issued shows a great increase in the territorial revenue of New Brunswick during the last year, the total receipts for the twelve months ending Oct. 31, 1920, amounting to $1,573,340.09. The report draws attention to the increase in stumpage and points out that, while the additional income is satisfactory, the fact must not be forgotten that too much timber is being cut off the public domain.

The receipts from timber licenses amounted to $78,860. The largest individual payment was $5,252, made by the Shives Lumber Company of Campbellton, who secured 656½ square miles. The total stumpage paid to the provincial secretary-treasurer was $1,257,967.17. Of this amount the Richards Manufacturing Company paid $161,648.08 and the Bathurst Lumber Company $147,273.46. The total timber cut from the Crown lands amounted to 364,842,079 superficial feet, divided as follows:

Spruce and pine logs, feet	197,663,026
Fir logs, feet	114,660,574
Cedar logs, feet	24,136,872
Hemlock logs, feet	4,055,167
Hardwood logs, feet	3,762,752
Poplar logs, feet	1,403,758
Sleepers, pieces	533,364
Fire and pulp wood, cords	7,067
Poles, pieces	7,517

How Germany Will Pay for Forests

At a hearing recently before the Reparations Commission in Paris, on land and orchard damages, Germany contended that it was incumbent upon Germany to pay the proportional cost of replanting orchards, which should be determined by the difference between the age of the tree when destroyed and the normal life of the tree according to an official announcement.

Germany recognized that compensation was due for the destruction of forests to the value of the wood destroyed or carried away and also for reforestation, provided the felled trees were of no commercial value.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

Wanted—White Pine

One or more cars 4 and 5/4 stained, good good short white pine. Mell & Sons Lumber Company, Philadelphia, Pa. 6-9.

Lumber Wanted

I am open to buy spruce box lumber 13/16" thick, P.I.S., 4" up; length, 6 to 16'. Address Box 556, Canada Lumberman, Toronto. 6-13

Wanted

Logs to saw, or will buy sawmill with capacity of about 15,000 feet with a good season's cut. Address "Lumber," 103 Irving Ave., Ottawa, Ont. 7-8

Lumber Wanted

BASSWOOD WANTED—1". Basswood all grades. Advise quantity and prices F.O.B. shipping point. Box 551, Canada Lumberman, Toronto. 8

Wanted Lath

Prices on Hemlock, Pine and Spruce lath; delivered Detroit rate. Brewster Loud Lumber Co., No. 1307 Majestic Bldg., Detroit, Mich. 3-8

Lath Wanted

Will buy any quantity, White Pine, Spruce or Hemlock. Please quote your best cash price f.o.b. Toronto. C. W. James Jr., 358 Greenwood Ave., Toronto. 6-13.

Pulpwood

We are open to buy a limited quantity of rough and peeled spruce and balsam pulpwood for immediate and future delivery; cash on shipment. Log Export and Import Co., 241 Beaver Hall Hill, Montreal. 8-11

Lumber For Sale

Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co., Jamestown, N.Y. 6-t.f.

For Sale

300,000 feet Birch in logs ready to start sawing under National rules. Offered as No 3 common and better. Apply P.O. Box 6, Victoriaville, Que. 6-tf.

For Sale

New cut sawdust in car lots also green hardwood and green softwood trimmer blocks and ends 6" to 36" long. Car lots of each kind. Box No. 555, Canada Lumberman, Toronto. 8

Spruce

5/8 x 3
5/8 x 4 & wider
3 x 8—10/20'

Dry—Merchantable

J. E. Harroun & Son
Watertown, N.Y.

7-8

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

FOR SALE—Hickory dimension squares and flitches. It is true economy to purchase our stock sawn to your net dimension. J. Murchison & Son, Dickson, Tenn. 6-9

Ash For Sale

Four cars 4/4 log run Black and Brown Ash for sale, last season's cut, in good shipping condition. For further information write Card Brothers, Mountain Grove, Ontario. 15

Machinery Wanted

WANTED—Two heavy log or lumber trucks. Box 257, Canada Lumberman, Toronto. 11-t.f.

WANTED—Pulpwood barker (Moreau) of recent model in first class condition. H. E. Goodhue, Sherbrooke, Que. 5-8

Wanted

Circuar saw filing machine to handle 50" to 60" circular saws, must be in good condition. State price and maker's name. Box No. 554, Canada Lumberman, Toronto. 8

Wanted

Double drum steam log jammer or steam hoist. Will buy or rent. Advise size, condition, price, etc.

F. STANLEY KNIGHT,
5-8 Meaford, Ontario.

Machinery For Sale

For Sale

Box-Board Printer, 18 x 44", F. X. Hooper two-color, knocker feed, $975.00. All kinds box machinery for sale. Chas. N. Braun Machinery Co., Fort Wayne, Ind. 7-8

For Sale

One covel automatic band saw grinder for double cutting saws; a bargain; immediate shipment. The Muskoka Wood Mfg. Co., Huntsville, Ont. 6-9.

For Sale—Locomotive

One 28 Ton 3 Cylinder 8 x 10 Standard Gauge Lima Geared. Located in Canada. Box 376, Canada Lumberman, Toronto, Ont. 19tf

For Sale En-Bloc

Complete Saw Mill Equipment, including one four Block Hamilton Carriage. One pair heavy twin engines feed complete and steam nigger. One three block E. Long carriage with eight inch gunshot feed and steam nigger. One heavy three saw edger, W. Hamilton make. Three 75 H.P. boilers complete with Dutch ovens and stacks. One 90 H.P. engine and fly-wheel complete. One lath and shingle mill. Complete filing equipment. One refuse burner, shafting pulleys, transmission, etc., complete. Apply Box 543, Canada Lumberman, Toronto. 7-12

FOR SALE—Guaranteed rebuilt filing room machinery. Send for monthly mailing list. Ge Bott Mfg. Company, Big Rapids, Mich. 6-9.

One Mitts & Merrill No. 2-C Hog in first class condition. The Laberge Lumber Co., Limited, Sudbury, Ontario. 5-8

FOR SALE—Complete saw mill equipment, including three horizontal boilers, Corliss engine, Buckeye engine, double edger, circular saw with top saw, steam carriage and nigger and extra heavy transmission complete. Box 503, Canada Lumberman, Toronto. 5-8

For Sale

Quantity of chain ½" to 1¼", some long lengths suitable for work or for cutting up for boom chains.

L. B. GARTSHORE,
8 58 Front St. W., Toronto.

One 12 x 12 centre crank engine, 60 h.p.; one centre crank engine with sub-base, 75 h.p.; one centre crank engine, 30 h.p.; one side crank engine, left hand, 20 h.p.; one 27 h.p. portable engine on wheels, also new portables on wheels or skids 24 to 60 h.p. The Robt. Bell Engine & Thresher Co., Ltd., Seaforth, Ont. 6-11.

For Sale

Sash, door and planing mill machinery. Boilers, engines, motors, pulleys, gears, machine shop and moulding machinery, 8 feet Linderman glue jointer. Full printed list on request to Cargill Limited, Cargill, Ontario. 5-8

For Sale

One 40" Inserted Tooth Circular Slab Resaw, sturdy construction. Spare bits and shanks. Condition fair. This machine was used until replaced by a band machine. Just the thing for small mill. Make money out of your slabs. F. Stanley Knight, Meaford, Ontario. 5-8

Description of
Engine and Water Heater For Sale by
R. B. HERRON & COMPANY
Tionaga, Ont.

1—Becket Slide Valve Engine 16 x 24
Automatic cut off wheel governor
Four inch intake
Five inch exhaust
Length of base twelve feet
Length over all fifteen feet
Main shaft thirteen feet by seven inches
Complete with fittings, grease cups and lubricators.

1—Exhaust Feed Water Heater
Diameter 24", length 7'
Complete with connections.
Sixty feet of Four Inch Pipe.
Five Elbows Four Inch.
Two Flanges.
Price F.O.B. Car, Tionaga, Ont., $1,300.00.

1—Payette Edger
Complete with front and rear table and rolls
Equipped with two sets of jaws
Floor space 6' 6" by 4'
Over all 7' 8"
Diameter of saw mandrel 3 & 3/16
Pulley 12 x 12
Capacity forty thousand per day.
Price F.O.B. car, Tionaga, Ont., $600.00

7-10

Machinery For Sale

TWO KEG STAVE MACHINES

Complete with Jointers, Crozer, Clutches, etc.

Apply to G. M. Strong, 403 McGill Building, Montreal. 8

Wickes Gang

GANG: No. 12 Wickes Gang, 40" sash, 15" stroke, steam binder rolls, front and back in two sections, feed and oscillation combined, 1908 model, and has been in use for five years. We furnish with this gang 11 rolls for cants and stock, one filing machine, and 4 sets of saws.

THE PEMBROKE LUMBER CO.,
1t.f. Pembroke, Ont.

Second Hand Machinery

We have over $250,000 worth of used machinery of all kinds for sale. Suitable for mines, quarries, railroads, pulp and lumber mills, etc.

Everything carefully overhauled at our shops before shipped.

Send us your inquiries.

R. T. GILMAN & CO.,
19tf Montreal.

I Offer for Quick Shipment the Following Machines

Subject to Prior Sale

Please give me an inquiry if you do not find the machine you want among those listed below as I have about two hundred additional woodworking machines of various types.

Matcher and Sizer, 30 x 12 American.
Matcher, Hardwood Berlin, No. 89.
Matcher, American No. 77-B Double Profiler.
Matcher, Woods 24 in. x 6 in.
Matcher, Hardwood American No. 229.
Matcher, American No. 22 24 x 6.
Moulder, Hermance 10 in. wide open side.
Moulder, Greenlee Bros. 6 in. open side.
Moulder, C. B. Rogers 6 in. outside.
Moulder, Berlin 10 in. No. 118 inside.
200 prs. Moulding Knives ground to shape.
Band Resaw, Mershon 44 in.
Band Resaw, Connell & Dengler 60 in.
Band Rip Saw, American No. 1 Roll Feed.
Band Rip Saw, Fay & Egan No. 202 chain feed.
Circular Resaw 44 in.
Circular Saw Mill, Hoosier Pony.
Circular Saw Sharpener, Rogers 40 in.
Fan., 30 in. Brand New Clarage Single.
E. B. Hayes Dowell Gluer and Driver.
E. B. Hayes Dowell Rod Machine.
E. B. Hayes Standard Power Door Clamp.
Planer, Buss 30 in. Single Cabinet.
Planer, Whitney 24 in Single Cabinet.
Planer, Berlin 30 x 6 No. 182 Double.
Jointer, 24 in. Buss Machine Works.

C. J. ANDERSEN,
e.o.i.-t.f. 15 W. Swan St., Buffalo, N. Y.

Situations Wanted

WANTED—Position to manufacture lath or pickets by day or thousand. Best of references. Box 597, Sudbury, Ont. 6-9.

Wanted position as sawyer on left hand rig. Long experience on both bands and circular. Prefer a fast rig. Box 495, Canada Lumberman, Toronto. 5-8

BOOKKEEPER-STENOGRAPHER. Returned soldier, 20 years of age, wishes position in office of a lumber company or woodworking plant, in Toronto. Commence duties first week in May. Reasonable salary. Apply Box 558, Canada Lumberman, Toronto. 8

WANTED position by thoroughly experienced lumberman, from swamps through the whole operation to manager, including saw mill operation; can handle a logging and lumbering operation from stump to lumber pile and get results; can furnish best of references, married. Age 41. Box 552, Canada Lumberman, Toronto. 8-9

BAND SAW FILER open for position, have had 15 years' experience. Can guarantee first class work. Box 553, Canada Lumberman, Toronto. 8

YOUNG MARRIED MAN wants permanent position with lumber firm. Ten years' experience in handling camp supplies and correspondence. Can use typewriter. Best references. Box 520, Canada Lumberman, Toronto, Ont. 8-9

POSITION WANTED—By lumberman with 20 years' experience, open for engagement as grader and shipper. Hardwoods, (N.H.A.) softwoods, export and domestic. Highest references. Box 447, Canada Lumberman, 119 Board of Trade Bldg., Montreal, Que. 8

RETURNED MAN—Married, 8 years' experience in planing and building work, seeks position as superintendent of small planing mill. Thorough knowledge of lumber also woodworking machinery. Can take detail from blueprints. State full particulars in first letter. Box 547, Canada Lumberman, Toronto. 8

Man with 12 years' experience in the Quebec lumber and pulpwood business, speaking both languages, wishes position as superintendent in a better location for a company doing business in pulpwood or lumber. Has thorough knowledge of office work and is competent to take charge of any operation. At present manager of an American company on North Shore, but wishes to make a change. Address replies or enquiries to Box 512, Canada Lumberman, Toronto, Ont. 5-t.f.

Would you be interested in securing the services of a young man, twenty-one, with a perfect record of honesty, loyalty and exemplary characted? Have plenty of brains, initiative and tact. Have spent four years' in lumber and woodworking offices. Devote my spare time to study of books and magazines bearing on my work in millwork and correspondence, etc. Would always make your interests primary. At present employed with large firm. Furnish excellent credentials. Box 560, Canada Lumberman. 8

Situations Vacant

WANTED—Engineer, circular filer, blacksmith, and sawyer for season's cut commencing in April. Box 504 Canada Lumberman. 5-tf.

WANTED SAWYER for double cut band saw. Two setters accustomed to steam set works. One lath mill foreman. Apply Colonial Lumber Co., Ltd., Pembroke, Ont. 8

WANTED—Sawyer for right hand single cut band saw; setter accustomed to steam set works; doggers, gang sawyer and edgermen. Apply Graves, Bigwood & Co., Byng Inlet, Ontario. 7-8

WANTED

Sawmill men, filer, sawyer, setter, lath sawyer, edger and trimmer men. Apply Box 491, Canada Lumberman, Toronto. 4-9

WANTED

Live man to take charge of lumber and cooperage mills in Ontario, one preferred who could take third or half interest. Box 508, Canada Lumberman, Toronto. 5-8

WANTED—Experienced lath mill foreman for large lath mill. Six machines. When applying state age, experience, firms employed with, salary expected, and when available. Enclose references. Apply Box 531, Canada Lumberman, Toronto. 7-8

WANTED—Mill superintendent for sawmill in Northern Ontario. Applicant must have had first class experience in the sawmill business, be capable of supervising all the lumber grading and duties in connection with the sawmill business. Apply, stating experience and salary expected, to box 880, Sudbury, Ont. 8-9

WANTED—Experienced sawmill men. Two right hand band sawyers, one left hand band sawyer, also setters, edgermen, trimmermen, lumber pilers, graders and lumber handlers.

The Pas Lumber Co., Limited, The Pas, Man. (Formerly Prince Albert Lumber Co., Ltd., and Ladder Lake Lumber Co., Ltd.) 6-8.

WANTED—An experienced saw mill foreman for a two band and gang mill in Algoma district. Must be an expert mechanic and have good executive ability, able to get best results in quantity and cost of manufacture. When applying state age, number of years' experience, types of mills and firms engaged with. State salary expected and when could take charge. Enclose references. Box 530, Canada Lumberman, Toronto. 7-8

WANTED—Live commission men to sell coast stocks throughout the Eastern and Prairie Provinces. Liberal commission to those who can obtain the price. Box 540, Canada Lumberman, Toronto. 7-10

Miscellaneous

Tug Wanted

Wanted to purchase a small steam warping tug, commonly called "Alligator." Send full particulars, stating price, to U. O. I. Co., 194 Middle St., Ottawa, Ont. 7-8

For Sale

A large timber limit in British Columbia, containing spruce, fir, hemlock and cedar, railways run through the limit and also railway spur. This can be bought at a low price and on easy terms. For full particulars, apply N. L. MacDonald, MacDonald Lumber Company, 34 Victoria Street, Toronto. 8-11

Sale of Red and White Pine

Tenders will be received by the undersigned up to and including Wednesday, the 20th day of April 1921, for the right to cut the Red and White Pine Timber on parts of the townships of Afton and Sheppard, in the Temagami Forest Reserve, in the district of Sudbury, having an area of 22 square miles.

For further information, Maps, etc., apply to the undersigned, or to Mr. J. T. McDougall, Crown Timber Agent, North Bay, Ontario.

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, March 3rd, 1921.

N.B. No unauthorized publication of this Notice will be paid for. 6-8.

TENDERS FOR PULPWOOD and TIMBER LIMIT

Tenders will be received by the undersigned up to and including the **15th day of June, 1921**, for the right to cut pulpwood and pine timber on a certain area situated on the Nagagami River and other territory adjacent thereto, in the District of Algoma.

Tenderers shall state the amount per cord on pulpwood, and per thousand feet, board measure, on pine, that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for spruce and 40 cents per cord for other pulpwoods, and $2.50 per thousand feet, board measure, for pine, or such other rates as may from time to time be fixed by the Lieutenant-Governor-in-Council for the right to operate a pulp mill and a paper mill on or near the area referred to.

The successful tenderer shall be required to erect a mill or mills on or near the territory and to manufacture the wood into pulp and paper in the Province of Ontario.

Parties making tender will be required to deposit with their tender a marked cheque, payable to the Honourable the Treasurer of the Province of Ontario, for fifty thousand dollars ($50,000), which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out conditions, etc.

The said $50,000 shall remain on deposit until the pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation the deposit of $50,000 may be applied on account of bonus dues as they accrue, but the regulation dues, as mentioned above, shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelope and marked plainly on outside, "Tender for Nagagami Pulp and Timber Limit."

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, January 24th, 1921.

N.B.—No unauthorized publication of this notice will be paid for. e.o.i.-4-11

"When you have any transit cars and cannot find a home for them, ship them to us. We will unload, store, insure and reload them when you desire, at reasonable charges. Write for full particulars." The Forest Products Co., Canton, Ohio. 6-9

PROVINCE OF QUEBEC

Leasing of Water Powers and Timber Limit

Notice is hereby given that on **Wednesday, June 1st, 1921,** at 10.30 a.m., in the sales room of the Department of Lands and Forests, at Quebec, the following will be offered at public auction:

1. Different water power sites on the Megiscane and Bell Rivers, in the County of Temiscamingue;

2. A timber limit 400 square miles in area in the projected township of Louvicourt, Narrias, Tiblemont and Vauquelin, in the upper part of the Bell River watershed.

For fuller details and information please apply to the Department of Lands and Forests at Quebec.

ELZ MIVILLE DECHENE,
e.o.i.4-10 Deputy Minister.

TENDERS FOR PULPWOOD and TIMBER LIMIT

Tenders will be reecived by the undersigned up to and including the **4th day of July, 1921,** for the right to cut pulpwood and pine timber on a certain area situated in the vicinity of Long Lake, District of Thunder Bay.

Tenderers shall state the amount per cord on pulpwood, and per thousand feet, board measure, on pine, that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for spruce and 40 cents per cord for other pulpwoods, and $2.50 per thousand feet, board measure, for pine, or such other rates as may from time to time be fixed by the Lieutenant-Governor-in-Council, for the right to operate a pulp mill and a paper mill on or near the area referred to.

The successful tenderer shall be required to erect a mill or mills on or near the territory and to manufacture the wood into pulp and paper in the Province of Ontario.

Parties making tender will be required to deposit with their tender a marked cheque, payable to the Honourable the Treasurer of the Province of Ontario for fifty thousand dollars ($50,000), which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out conditions, etc.

The said $50,000 shall remain on deposit until the pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation, the deposit of $50,000 may be applied on account of bonus dues as they accrue, but the regulation dues as mentioned above shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelope and marked plainly on outside "Tender for Long Lake Pulp and Timber Limit."

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, January 24th, 1921.

N.B.—No unauthorized publication of this notice will be paid for. e.o.i.-4-13

PLAYING THE GAME

One of the chief objects in forming the Ontario Retail Lumber Dealer's Association was to promote the development of mutual respect and fair dealing between the members of the retail trade and those from whom they buy their stocks. No one expects

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

that the formation of the Association can entirely remove all the causes of distrust that formerly existed, but it is a reasonable thing to believe that the very fact that a man belongs to an association such as ours will give those with whom he has business dealings more respect for him and greater confidence in his business methods.

Does he belong to the Association is a question that is often heard nowadays when two men are talking about the business methods and standing of some dealer. If he does, it is taken for granted that his standard of business ethics is higher than it would be otherwise. A dealer, therefore, owes to his association not only annual dues, but co-operation in developing its usefulness to all members. There is no manner in which this co-operation can be more effectively given than by PLAYING THE GAME in all business dealings, whether buying or selling, and seeing that, so far as your actions are concerned, no one can criticise either you or the association to which you belong.

That is all on this subject for the present, and short as it is, it is induced by the fact that the secretary of the association has heard an occasional remark of late from wholesalers to the effect that cancellations during the past month or two were sometimes possibly due to the fact that market prices were sagging. The secretary knows, as well as any one else, that retailers also have complaints in regard to the failure of some wholesalers to make delivery on a rising market and that their patience was pretty severely tested in many cases when for several years prices were advancing. But that is neither here nor there. It is not a question of balancing off the offences of one side against those of the other, but of continually keeping in mind the fact that this bad habit of crawling out from under an unprofitable contract is not PLAYING THE GAME. Just imagine what the result would be in Ontario if for one whole year no wholesaler experienced anything in the nature of a cancellation from a retailer which he could suspect had been influenced by lower prices. The wholesalers would be falling over themselves to make prompt delivery of every order they received, whether the market subsequently advanced or fell.

There is just as large a percentage of square dealers on the one side as on the other and what the associations, both of retailers and of wholesalers expect of their members, is to compete with one another in raising the percentage to a straight one hundred.

Local Branch Work

While none of the local branches of the O.R.L.D.A. need to be told the reasons for their existence, it will be interesting to them to read a summary of the functions of a local branch as outlined in a recent issue of "Wood Construction," published by Ohio Association of Retail Lumber Dealers. Here they are:

To encourage the use of lumber as a building material by an educational propaganda and by the collecting and distributing of information concerning the proper use of wood.

To prevent, so far as possible, the sale of lumber of inferior grade, kind or manufacture.

To compile data as to stocks of lumber on hand and, if practicable, to avoid carrying an excess quantity of odd sizes and grades of lumber, thereby reducing the expense of operation.

To co-operate in a legal manner in stabilizing prices so as to insure a fair margin of profit.

To compile and disseminate information regarding the cost of doing business, and to further the education of retail dealers in the prevention of waste and unnecessary expense.

To avoid unfair and discriminative trade methods.

To prevent, so far as possible, imposition on the public by means of misrepresentations and dishonest practices.

Why the Customer Buys

A customer buys a bill of lumber because he wishes to use the material, not because he is interested in your business.

Therefore your Sales Talk should be carefully planned.

A whole lot of managers do not succeed in closing sales simply because they go about it in a haphazard manner.

They do not have a definite plan and therefore only succeed in closing the deal after they have accidentally hit upon the proper Appeal.

A prospect buys a house for one of the following reasons:

(a) Because of its Usefulness. The old one is too small and inconvenient. His wife's health may break down under hard work. He wants to provide conveniences which will enable her to do her work easily.

(b) Gain of Money. He may be "close" and has discovered that it is costing him too much money to live in the old house.

(c) To Satisfy His Pride. He may be anxious to have the best house in the neighborhood and ambitious to outdo every other person in the community.

(d) As a Matter of Caution. He may be afraid that the old house does not afford the protection that it should and will cause sickness.

(e) Yielding to Weakness. Occasionally he may permit himself to be "talked into" buying a home because he does not have the nerve to refuse.

Tests Disprove Old Theory

The old theory that charring the butts of fence posts and telephone poles preserves the wood has been disproved by a series of tests recently conducted by the Forest Products Laboratory of the Forest Service, United States Department of Agriculture, on fences with charred and untreated posts of verious species. The charred posts proved in these tests to be even less durable than the untreated ones.

Theoretically, an area of charred wood around a post should prevent decay, because charcoal does not decay or encourage the growth of fungi. But the charred area around a post is not usually a solid covering. It is checked through in many places. If posts are seasoned before they are charred, the charring does not reach to the bottom of the season checks which are always present. If green unchecked posts are charred, checks will open through the charred part as the wood seasons. In either case the uncharred centre of the post is exposed to fungus infection and will decay as rapidly as untreated wood.

Charring deep enough to resist decay would undoubtedly weaken a post of ordinary size.

C.N.R. Western Map Now Being Issued

A revised edition of the map of Manitoba, Saskatchewan, and Alberta issued by the Industrial and Resources Department, Canadian National Railways, Winnipeg, has just come from the press. It shows prominently all C.N.R. and G.T.P. lines in operation, under construction, and projected. Names of stations are printed in clear type and contrasting color, while general physical features of the country are given in fairly full detail and distinctly. On the reverse side of the map brief particulars of 530 towns and districts served by the system in three provinces are given. This map is issued primarily in connection with colonization work abroad and in this mission has had a very large demand, no less than 20,000 copies of the first issue having been mailed in the United States last year direct to applicants.

Advertising Prices

"It does not pay to advertise prices," says the average lumber man but here is an instance when it did pay to depart from the usual practice.

The hardware dealer and the general merchant of the town of Fiske, Sask., publish a four page store news each month. It is a miniature newspaper save that most of the space is devoted to advertising merchandise.

As there is no newspaper in the town the manager of the Security Lumber Company's yard at that point arranged to take one-third of the front page in each issue for his own advertisement.

This, following the accepted rule of lumber advertising was more in the nature of "name publicity" than an actual advertisement. Last issue he changed the copy and gave a little talk on the lines of coal carried in stock and inserted the price in large black figures.

Almost before the paper was in the mails a farmer drove up and remarked, "I see you are advertising so and so coal at $11.60." "Yes," said the Security man. "All right, I'll just take a load. you are 40c. a ton lower than the other fellow!"

That was getting quick action on an advertisement solely by inserting prices, for the farmer was not a regular customer.

The joke of it was that the price quoted was exactly what the same coal had been selling for all winter.

Try price advertising for a change.

Review of Current Trade Conditions

Ontario and the East

Business in the lumber line is not picking up as rapidly as some of the sanguine ones expected. Different reports are heard regarding the activity of the trade. Some declare that it is growing duller and others affirm that from this out there should be a steady improvement. Most orders received are for small or mixed carloads, and in a great many instances the wholesalers are urged to rush the shipment without delay, showing that stocks at several points are getting low. There is no doubt that more inquiries are coming in, and a number are being translated into orders. The building situation is looking up at many points, and if construction goes on, with all the permits that have been taken out, there is no reason why 1921 should not be a favorable year for the retail lumbermen.

The announcement of the decrease in the freight tariff on lumber shipments from the West, which went into effect on April 5th, does not meet with much favor on the part of eastern representatives of British Columbia sawmills. They were hoping for a reduction of, at least, 15c per hundred lbs., and the decrease is only about 6c or 7c. It is believed that this small concession was given by the Canadian roads simply to offset a similar move made by western lines in the United States who put a new rate into effect on April 1st.

The new and old schedules are as follows, a few representative points being taken:—

	New Rate	Old Rate
Vancouver to Toronto	97c	1.03½
Vancouver to Windsor	91c	.98
Vancouver to Hamilton	94c	1.00½
Vancouver to Guelph	97c	1.03½
Shingles as follows.—		
Vancouver to Toronto	1.10½	1.14
Vancouver to Hamilton	1.07½	1.14
Vancouver to London	1.07½	1.14
Vancouver to Chatham	1.07½	1.14
Vancouver to Windsor	1.04½	1.11½

The reduction amounts to only $2.00 or $2.50 per M feet, which is a decidedly small advantage for western stock against the low prices prevailing on Ontario and Michigan hemlock and Southern pine. The average retailer can easily see that the sum saved in transportation will not be very great as the following are the guaranteed weights in connection with B. C. wood goods: Shiplap and boards, fir or hemlock, 2,500 lbs. per M feet; flooring and V joint, 2,000 lbs. per M feet; timbers, 3,300 lbs. per M feet rough, 3,000 lbs. per M feet, dressed; dimension, 2,600 lbs. coast standard; 2,900 lbs. per M feet, eastern standard; cedar bevel siding, 700 lbs. per M feet; 5/8 V joint fir or hemlock, 1,200 lbs. per M feet.

In accordance with the judgment and order of the Railway Board, dated January 14, 1921, the rate of exchange in connection with shipments of freight between points in Canada and the United States from April 1 to April 14, inclusive, will be 12¾ per cent., and the surcharge on the said traffic will be 8 per cent.

Driving conditions in the lumber line have been particularly good this spring and reports received from the north indicate that all the logs have been brought out to the streams and roadways, and with a fair amount of spring rain, there is not much fear but that the bulk of this year's timber will find its way to the saws.

There is an abundance of labor at all points, but the scale of wages will not be as high as in previous years. Just how men throughout the mills and lumber yards of Ontario will take the decrease is not yet known. Most plants in the province operated on a ten-hour day in 1920, and will resume on the same schedule.

The boys on the drives are receiving about $2.50 a day and board, whereas last spring they demanded and were given $4.00 to $4.50. One leading lumber concern has posted a notice throughout its camps the rate of pay that will prevail, starting April 1st. This wage is, possibly, a fair indication of what will be paid by other concerns. Bushmen, $50.00 a month (high) with board; ordinary labor at mill and track, $3.00 per day of ten hours; board, 90c a day; river drivers, $65.00 a month and board. It is also announced that all necessary goods in the van and store will be reduced on an average of 10%.

During March, 1920, the total value of building permits issued in Toronto was $2,062,000, while for March, 1921, the approximate figure was $1,750,000. It is stated that April will be a banner month.

United States

Business in the lumber line in the United States is proceeding without any material change in condition. Building has not assumed any great active proportions as yet and any stocks that are being sold are largely because of immediate requirements. There is still hesitancy and uncertainty regarding the future, although most exponents of the industry profess to be exceedingly optimistic. It is stated that retail dealers think two or three times before they purchase any considerable amount of stock. Money is still difficult to obtain in many sections and farmers are somewhat down-hearted by the low level of prices which they are receiving for their product.

Retail lumbermen are, certainly, studying local conditions before they buy very extensively. Wholesalers at a few points declare that trade is good, while others affirm that it is a long way from being what it should be at this season of the year. Still, on the whole, progress seems to be the order of the day and it has been sufficient to give to the entire structural lumber market a more stable tone than has previously been evident. Price fluctuations in yellow pine and Douglas fir have been slight during the last three weeks and buyers are entering commitments with greater confidence. The volume of buying is gradually increasing, as dealers in the principal cities of the country are entering the market; smaller cities are even more active in construction work and dealers are buying somewhat more freely. There is no disposition to buy much beyond current needs; buyers are conservative and are holding their advantage in a distinctly buyers' market.

Hardwoods are reflecting a slight improvement in demand as some of the industrials are coming into the market on a limited scale. Prices are more stable in common grades and the higher grades are showing a slight advancing tendency. There is no great rush of buying, but there is a distinct increase in the volume of inquiries and an increase in the number and size of orders being placed. The automobile body business is picking up, the furniture manufacturers are buying more lumber and generally the factory consumers of hardwood are showing more concern than for some weeks in acquiring lumber. As yet the demand for better grades is larger than that for lower. The higher grades, because of low production, are becoming increasingly difficult to secure in large quantities. The lower grades are not moving so well and this situation is not expected to be materially changed until railroad rates are adjusted to meet the situation. As building operations open up and increase there is sure to be an improvement in the demand for hardwoods, though as hardwood flooring, trim and such items are the last to be delivered to a job, this demand will not make itself felt until building operations are well under way.

There is a healthier tone in the yellow pine market. Indications that have been multiplying from week to week are distinctly pointing to a continuance of demand and there is good reason to believe that the bottom has been reached in prices. Generally, quotations have been stable for at least three weeks. There has, in fact, been little change in prices since the first week in March. It was generally conceded up to the middle of March that there was little backbone to the demand, for it was realized that dealers were, for the most part, amending broken stocks in hope, rather than anticipation, of Spring business. The volume of this demand was fitful and buyers were unenthusiastic, for they had more than a reasonable doubt as to prospects. While it would probably be over-sanguine to say that these doubts are entirely removed, it is true that they have been dissipated entirely in some sections of the country and that the outlook is better throughout the country. Building is going ahead—haltingly in many instances, but in some degree everywhere. The demand is therefore more soundly based, for it represents replacement of stock that is moving to the consumer.

Manufacturing conditions have shown no material change. Rains have occurred in some sections, tending to interfere with operations somewhat. Production is showing an increase as more of the small plants resume operation.

Great Britain

The labor disturbances, and particularly the strike of the coal miners, has greatly upset business and retarded any slight improvement that might have been made during the past few weeks. The outlook at the time of writing is not any too encouraging and as long as agitation and distrust prevail, there is not much hope of any real

progress being made in the business or building situation or in satisfactory turn-over in the timber trade.

The softwood trade has been passing through a time of great strain during the past few weeks. Rapidly falling prices, financial stringency and heavy stocks have severely tested the market, but it is hoped that the worst days are over. The c.i.f. on f.o.b. market is still in a state of inactivity for practically all classes of softwoods. Present stocks are certainly all sufficient to meet the existing demand, and no doubt some little time will elapse—after an improvement in consumption has been experienced—before importers will be persuaded to enter into any fresh commitments.

Swedish sawn goods are likewise of little interest until such times as the bulk of present stocks—purchased at many times in excess of today's spot values—have found their way into consumption.

It is learned that practically no contracts for forward shipment are being fixed at present for pine goods, but as existing stocks of the better grades are not unduly heavy, there is no likelihood of any appreciable decrease in value of pine ruling during the coming season. The market in pitch logs and lumber remains inactive, and present stocks are more than sufficient to satisfy the anticipated demand in the near future. Fortunately the arrivals of softwoods generally have of late been limited in quantity.

A Manchester correspondent writes:—One of the strongest markets at present is the pine market. A few days ago we saw an interesting letter from Canada, which stated that several of the best-known sawmillers and shippers of pine in the Ottawa valley were holding out for full values, and were prepared to close down their mills rather than accept lower prices than are current now. As it is, the "cut" at many mills is considerably reduced. The prospects for cheaper pine, therefore, are not rosy, and first quality will, we imagine, keep at the £110 level at least for some considerable time yet.

There is a very meagre timber import to record, only two boats being officially recorded as arriving with timber cargo since our last report. These are the Ashworth from New Orleans with a small parcel of oak lumber; one of gum lumber; a consignment of hickory billets "to order"; and the Flora Park bringing from Hamburg a parcel of fir. In addition to the foregoing the Manchester Hero, from various Canadian and North American ports, will have berthed, amongst other cargo being a quantity of Quebec pine for G. Mason & Co. Ltd. There is, too, the Manchester Corporation on passage, also with pine for the last-named firm.

Speaking of the cost of housebuilding, it seems that certain contradictory statements have been made by the Ministry of Health and the Master Builders as to the reported drop in the cost of erecting dwellings under the housing schemes in hand in various parts of the country might well leave the average reader wondering. That a certain reduction in cost may be looked for, however, seems certain when one turns to the position with regard to timber. Russia, which at normal times contributes a fair proportion of the soft timbers used in building, being for some time to come out of the market, what we receive must, of necessity almost, come from the Baltic. British merchants are making no advances, and seeing that the Northern holders of timber are bound to sell to meet their liabilities, it is reasonable to anticipate that a marked break in prices may occur. This anticipation is strengthened by the fact that an important concession has already been secured. For several seasons the shippers of timber from the Baltic have insisted on a guaranteed rate of exchange on all contracts, by which serious losses accrued to British merchants through this rate being adverse. This season the exchange guarantee has been withdrawn.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Quebec Lumber Trade Remains Very Quiet

The lumber trade in the city and district of Quebec has undergone no change. It still continues to remain dormant in keeping with the conditions related in the February issue of the "Canada Lumberman," without any apparent signs of awakening, and the most astute business men engaged in the trade in this city, in their review of the situation, do not look for an improvement for some time to come, not that they are pessimistic or discouraged but because they do not anticipate any change in the United Kingdom or United States markets for some weeks to come.

The advices from the representatives of Quebec lumber firms in England from the beginning of February are not very cheering. They have not as yet sent out any orders and no arrangements have yet been made for shipments from the port of Quebec this spring. The reports being received from the Quebec representatives abroad are to the effect that the markets are inactive and restricted in demand and likely to continue so for a period of time. They say in their letters that this atmosphere of inactivity is particularly noticeable in some of the chief varieties, and point out that the values are unsteady, showing in some cases a marked decline. Ocean freight space is being offered on account of the large number of vessels tied up in idleness; nevertheless no advantage in this respect is being taken from the fact of the dormancy of demand.

Imports to the United Kingdom are moderate and the stocks in the aggregate are becoming reduced but notwithstanding the purchasing power seems for the time paralyzed. In this retrospective review of the situation the Quebec representatives abroad proceed to state in their letters that the political horizon is none too serene in aspect, and the turbulent spirit of labor, is in the main responsible for the business inactivities that prevail in the United Kingdom. Until labor by an experience of bitterness comes to realize that capital dominates in the life of trade, the present conditions must go unchanged. English business interests, according to the letters at hand are beginning to comprehend that the Government with their tacit consent have been too lenient with the labor unions, and instead of pandering to their demands out of sympathy on account of the nation's gratitude for services rendered during the war, should have been more firm in treatment of radicals for the weal of the people and the reconstruction of the nation and the business world in general.

The miners' strike, that was anticipated, has been one of the causes of trade restriction and tight money in the United Kingdom, and upon the result of this strike much depends. In case of a collapse of the rising and if the miners admit their position being wrong and incompatible with business conditions, and return to work with a new spirit of resignation, this should clear the vision of labor unions in general as to the impossibility of their attitude, and go far to restore confidence and encourage renewed activities in business, including construction that will create a demand for lumber and improve the market.

In the meantime there is no demand for Quebec yellow pine and stocks remain full. The same can be said for square and red pine, and altogether there appears to be in the United Kingdom markets sufficient wood for the present limited demand.

The United States market is still depressed and no wood whatever moving from Quebec in that direction. The wholesale and retail lumber dealers of the United States are assembled in convention at Chicago to study the situation and is being attended by a number of Canadian lumbermen, including Mr. W. G. Power, president of The Sharples Lumber Co., Ltd., of Quebec, and the outcome of this convention is awaited with considerable interest.

Mr. Power, who is one of the most astute lumbermen in the Quebec trade, treats the present season of depression in both the United Kingdom and the United States in a philosophical manner. While not sanguine as to any beneficial change in the present, he is optimistic of the future, and holds the belief that the break in the dark clouds that hover over the business horizon, will first come from the American market that will awaken Canadian business interests.

Local conditions show no improvement, notwithstanding the city of Quebec is short 2,000 dwellings apart from other buildings in contemplation. The people there cannot be induced to invest their money on account of the high cost of material and inefficiency of high-priced labor, who demand big wages without a fair equivalent in production.

The pulpwood situation in the district of Quebec is even less active than it was two months ago. There is no demand whatever for this wood from the American mills and consequently no movement. Quebec pulpwood interests, discussing the slump in business with the "Canada Lumberman" do not, however, view the matter with any feeling of alarm, and do not look for an immediate change in the prevailing conditions. They are aware that the American mills have been procuring their supply of wood from the State of Maine and buying at $4. less per cord, delivered at the mills than they can get the same from Quebec. The cutting down of the Maine forests was referred to in the "Canada Lumberman" two months ago when, it was pointed out that devastation of the forests by the budworm led to their being cut and sold for pulpwood that affected the Canadian supply. In the meantime, the Quebec dealers say that they will not lower the present price of their pulpwood.

EDGINGS

The Maritime Lumber Co. of Campbellton, N.B., intend putting in operation at Rocky Gulch a portable sawmill.

The logging camp of Gilbert Stockford, lumberman, at Burton, near Gagetown, N.B., was recently destroyed by fire.

The Bathurst Lumber Company, Bathurst, N.B., has spent $1,136,600 on the hydro-electrical development at Grand Falls on the Nepisiquit River.

H. B. Armitage, formerly operating at Legal, Alberta, as the H. B. Armitage Lumber Company, has sold out his retail yard there and removed to Edmonton, where he is opening a yard.

The office of the Guelph Lumber Co., Guelph, Ont., was recently broken into and ransacked. The till was opened but there was no money in it, so that the marauders got little for their efforts.

Louis Forsyth, retail lumberman, of Agincourt, Ont., has disposed of his business to Mr. Ogden, who has been engaged in farming near Agincourt for a number of years. Mr. Forsyth is retiring.

The sawmill of Spiers & Tye of Port Hope, Ont., was damaged recently by a flood which visited that district. Part of the mill building was wrecked and a quantity of shingles and lumber carried away.

W. J. Van Dusen, of the H. R. MacMillan Export Co., Vancouver, has returned from an extended trip to South America, where he went to look over the field for the sale of British Columbia lumber.

A. E. McMaster, secretary of the Whalen Pulp & Paper Mills, Limited, addressed the Canadian Credit Men's Trust Association in Vancouver recently on the pulp and paper industry of the province.

The people of Prince Rupert are looking forward to the establishment of the pulp plant being organized to handle the Emerson properties. The location of the site of the plant has been practically settled.

The offices of the C. G. Anderson Lumber Co., in the Excelsior Life Building, Toronto, have been recently remodelled and enlarged and the firm has now as fine a suite of private offices as could be desired.

Trees Development Company, Limited, Toronto, have been incorporated to manufacture and deal in pulp and paper products. Capital $100,000. N. J. Riordon and T. A. Mills, both of Toronto, are two of the incorporators.

The sawmill of Andrew McKean, Collingwood Township, Grey County, was burned to ground recently, the loss being estimated at over $10,000, with no insurance. The mill was one of the best hardwood ones in Ontario.

The operating management of the Whalen Pulp & Paper Company announce that the sawmills at the three plants, Port Alice, Swanson Bay and Woodfibre, are to be re-opened for the season and will employ a large number of men.

M. A. Bradshaw, Limited, Montreal, have been incorporated to conduct sawmills and manufacture and deal in boxes and other wood products. Capital $49,000. F. B. Common and F. G. Bush, of Montreal, are two of the incorporators.

The Canada Machinery Corporation of Galt, Ont., have closed out their Brock Avenue showrooms in Toronto and have moved their sales office to rooms 721-22, Bank of Hamilton Building. W. J. Irving will continue in charge of the Toronto sales force, as heretofore.

Landry, Langlois, Limitee, Mont Joli, P.Q., have been incorporated to manufacture and deal in lumber, timber, pulpwood and other forest products. Capital $20,000. L. P. Landry of Mont Joli, P.Q., and E. Langlois, of Saint Mose, P.Q., are two of the incorporators.

International Toy Company, Limited, Montreal, have been incorporated to conduct a general lumber business, manufacturing and dealing in logs, lumber and other wood products. Capital $50,000. A. A. Magee and T. B. Heney, both of Montreal, are two of the incorporators.

Pacific Color Manufacturing Company, Limited, Vancouver, B.C., was recently incorporated to operate sawmills, manufacturing and dealing in forest products. Capital $250,000. Two of the incorporators are G. E. Ankers, of Los Angeles, Cal., and W. Urwin, of Vancouver, B.C.

Walter Thomas, of Eureka, Cal., is considering the establishment of a plant at New Westminster to make fuel out of sawmill waste, a product he is at present making in California on a commercial basis. He sent a sample to the secretary of the Board of Trade, with an enquiry as to possible sites.

Taking out the last of the export order of ties for British railways, the SS. Deuel of the U. S. Shipping Board, operated by Struthers & Dixon, sailed from Genoa Bay on March 8 for the United Kingdom. She carried 4,500,000 feet of ties, part of which was loaded at Vancouver and the remainder at Chemainus and Genoa Bay.

M. A. Ouellet & Frere, Limitee, Sainte Angele de Merici, Rimouski, P.Q., have been incorporated to conduct a general lumber operations, manufacturing and dealing in lumber, timber and other forest products. Capital $49,000. M. A. Ouellet and C. Ouellet, manufacturers, both of Ste. Angele de Merici, P.Q., are two of the incorporators.

Work is being rushed on the machine room of the International Paper Company's mill at Three Rivers, Que. In this mill there will shortly be erected four news print machines and one wrapping paper machine. The sulphite mill has been in operation for three months, and it is expected that the paper mill will be running next fall.

M. A. Grainger, managing director of the Timber Industries Council of B. C., has been honored by being named president of the Canadian Society of Forest Engineers, the appointment being for the ensuing three years. Dr. C. D. Howe of Toronto, was elected vice-president, M. Dwight of Ottawa, treasurer, and Roland D. Craig of Ottawa, secretary.

D. P. Maguire, brother of Sir Alexander Maguire, British match manufacturer, has been spending some time at the match splint factory which the firm of Maguire, Paterson and Palmer have just completed at Pembroke, Ont. The plant has been under construction during the winter, and is now

beginning production. J. E. Ardron, secretary-treasurer of the company, says that Sir Alexander is expected in Canada in April, and meantime plans for the construction of their main $5,000,000 plant are in abeyance, nor has it yet been decided where it is to be established.

Orders have been posted in the customs offices at Vancouver and Victoria, that permits must now be obtained from the B. C. Forest Branch before any boom of logs or cradle of shingle bolts can leave the country. This applies also to the cedar logs being shipped to Japan. It is intended as a protection in the matter of payment of timber dues.

The Three Rivers Pulp and Paper Company, of which Noah Timmins is president, and R. J. Whyte, of Montreal, secretary, has about completed its plans for the erection of a pulp and paper mill at Three Rivers, Quebec. A site has been secured on the river, and a contract has been made with the Shawinigan Water and Power Company for electric power.

J. W. Wilkinson, of the Wilkinson Co., Ltd., Vancouver, has the distinction of being the first Canadian to take the special training course in steel business given by the U. S. Steel Corporation at Cleveland, Ohio. The course, which lasts some time, and is very thorough, takes the student from the ore pits to the last operation on the finished products.

The Laurentide Company, Limited, have constructed a dam on the Ruban River, 12 miles north of Casey, P.Q. It is constructed on solid rock, and is 377 feet long and 30 feet wide. The lumber used in the dam was about 110,000 feet, which was squared and trimmed with axes near the site of the dam. The structure will, it is expected, be of very material benefit in the logging operations of the company.

In these days of depression, figures on log production for January of this year—showing an increase of 34,000,000 feet over the total for January, 1920,—are rather cheering. The total of logs scaled during January, 1921, in the Coast area was 101,446,337 feet and in the Interior 31,909,558 feet, while during the corresponding period a year previous the Coast total was 84,189,761 feet and the Interior total 15,337,645 feet.

The Hocken Lumber Co. have removed their offices from 630 Confederation Life Building, Toronto, to 626 in the same building, where they have more spacious quarters. The company, which have been operating a winter mill at Deer Lake, recently closed down that plant after sawing nearly 2,000,000 feet of hemlock, the largest output in several seasons. It is expected that the company's mill at West River will start up in the near future.

The Dryden Paper Co. of Dryden, Ont., have got out all the pulpwood they require for the coming season and will have a reasonable surplus. It is stated that there was an over-production of pine and spruce pulpwood by settlers in Northwestern Ontario last winter, but this will eventually all be absorbed. Some of the wood is being used to make lath. The spring drive and towing of logs around Dryden has not yet been begun, and it will, probably, be early in May before the wood is moved.

The Northwest Lumber Company's mill is the largest between the Great Lakes and the coast, having been operated for the past five years on the St. Albert Trail four miles from the post office, having a site with yards of forty acres. A fully-equipped boarding house is in connection with the mill where employees are provided for who have not homes in the vicinity. The sawing capacity of the mill is 150,000 feet per day, two double cutting bands, slab resaw and horizontal slab resaw being utilized.

The Dominion Forest Products Laboratory, which is in the buildings used by the University of British Columbia, is to add a 300,000-pound testing machine. It has at present two machines, an Olsen 30,000-pound testing machine and a Hatt-Turner impact machine. The Government has a splendid "lab" housed in McGill University, Montreal, from where these machines were obtained, and the local facilities in Vancouver are such that they will be of great benefit to students taking up the forestry course.

A certain amount of activity will be going forward in the Queen Charlotte Islands this season, according to Captain C. H. Nicholson, manager for the G. T. P. steamship services, who has recently returned from Prince Rupert. Logging will be carried on at Cumshewa, and on Lyall Island, and about 35,000,000 feet of logs will be cut for various mills. Captain Nicholson also hopes to see resumption at Buckley Bay, Masset Inlet, but could not state definitely yet as Mr. F. Buckley was now in England and had made no announcement.

An interesting public meeting of the Toronto Board of Trade was held on Tuesday, March 29th, when there was presented under the Department of Education of Ontario two industrial firms, on "Lumberland," depicting operations in the woods and sawmills in Ontario, and on multiplying Ontario's power resources, the work and development of the Chippawa power canal being shown. The various scenes in connection with "Lumberland" were taken principally from the mills and logging camps of the Marshay Lumber Co. at Milnet, Ont.

Discrimination on the part of manufacturers in favor of British Columbia timber is becoming more noticeable every day. This is evidenced by a letter received by the Vancouver Board of Trade from a firm which has just closed in the United States and is moving its factory to Sault Ste. Marie, where it is to resume business in a short time. The firm is Everett & Son, of Waukegan, Ill. It seeks to secure 30,000 ironing table tops of western pine and will endeavor to place an order in British Columbia, although the material is to be used very far east of here.

B. M. Wylie, formerly crown timber agent for the Port Arthur district, before leaving Port Arthur for Toronto, expressed the opinion that reforesting was a great question for both the people and the Government of the country and said that townships unfitted for agricultural pursuits have been thrown open to settlement, while good agricultural lands have been left untouched by the plough. Mr. Wylie feels that the settlers on the poor lands should be removed to the good lands and the land from which they have been trying to make a living, be reforested.

A bill has been introduced in the New Brunswick Legislature for the prevention and suppression of fires. The new measure will become operative on June 1st. The expense of the scheme will be borne by the assessment of one-half of one per cent. on the premiums of insurance companies and any overplus of the year's operations will be deducted from the next annual assessment. A fire marshal and the necessary assistants will be appointed and will carry on an investigation of all fires. A board composed of two representatives each from the Government, the Board of Fire Underwriters and the Union of Municipalities will administer the Act.

FIRE BRICK
AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

The most belting service for each dollar invested

Dominion Friction Surface Belting, properly installed, means greater power economy because its flexibility makes it suitable for use on cross curves and where idlers are encountered. Its greater strength and pulley gripping power make it the most dependable for main drives, countershafts, large motors and heavy machinery where the belts are large.

Dominion
Friction Surface Belting

meets the diversity of conditions encountered in all industries. The Dominion Rubber System stakes its reputation on the unqualified success of Dominion Friction Surface Belting.

Our belting engineers, without cost to you, will study conditions in your plant and submit recommendations for your approval. Phone or wire our nearest Service Branch.

WHAT OTHERS SAY:—

"Your letter of February 15th received and we want to say that this was a very nice lot of lumber. It was good widths and lengths and well manufactured, dry stock and the grading was very liberal. We are sorry we cannot use more of this lumber at the present time. **WE RECEIVED SEVERAL CARS FROM OTHER MANUFACTURERS AT A CHEAPER PRICE, BUT THE LUMBER WAS NOT NEARLY AS SATISFACTORY.** When we are in need of more stock, we will take the matter up with you."

NOTE:—The above was sent to us February 24, 1921, unsolicited. Name given on application.

GEORGE C. BROWN & COMPANY

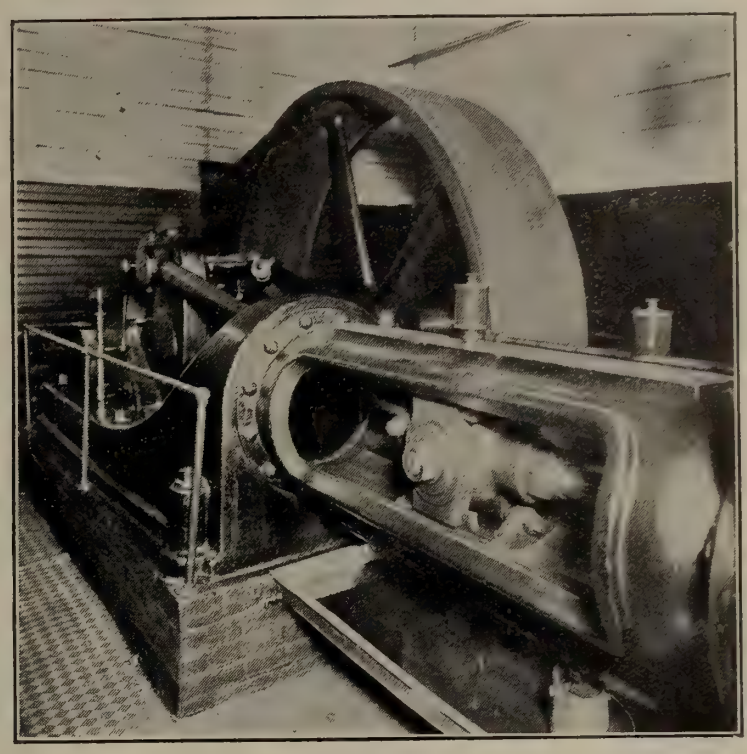
HOME OFFICE - MEMPHIS, TENN.

Band Mills:—PROCTOR, ARK. — CROOKED-BAYOU, ARK.

A GOOD RECORD!

Three years of service on the main drive of a large saw mill and it hasn't stretched yet. Such service is characteristic of Condor Belt. You, too, can have the same kind of service by specifying "CONDOR" The Original, Red, Friction Surface Belt.

We didn't mention the Length of Service this belt is expected to give for the simple reason that, at present, it looks as if it would run from NOW ON!



Condor BELT

SPECIFICATIONS—CONDOR Red Friction Surface, Made Endless.

72 ft. long, 26" wide, 10 plies thick.
Distance between Shaft Centers 24' 8½".
Diameter Driving Pulley 120".
R.P.M. Driving Pulley 84.
Diameter Driven Pulley 48".
Horse Power 330.

Does it Pay to Use Logging Machinery?

Read this letter from one who is using a Marsh Gasoline Hoist

The Marsh Engineering Works,
Belleville, Ont.

Gentlemen:

Your favor 3rd. We are not at present requiring another machine as the one we purchased is still working perfectly, and has not lost us one minute since we bought it.

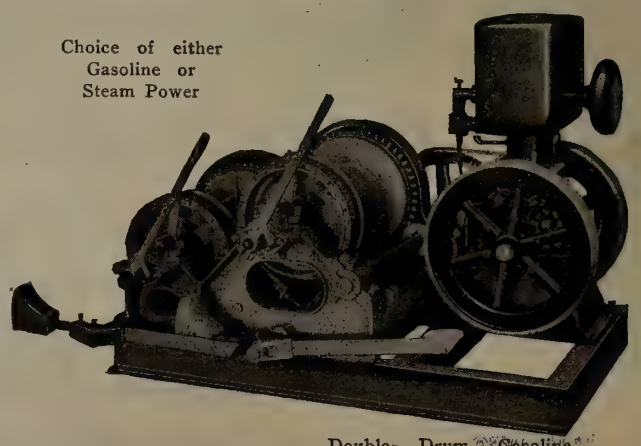
It will be of interest to you to know that this machine hoisted 40,000 logs (hardwood) last season on our logging train, and previously decked the same logs along the track. The lumber cut from these logs was over 3,000,000 ft. In other words, the machine handled 80,000 hardwood logs and did not cost one cent for repairs. At one time we had 10 teams hauling 46 loads per day; from 12 to 18 logs to the load; and with 3 men the machine kept clear of the teams. Practical men will know what that means in saving. Particularly is this so in hardwood, for the weight is one-third greater than soft wood, and with a little snow on takes very skilful handling if done in the old way and requires very skilled men; while with the outfit purchased from you, a man who can see and use his hands can do the work.

If you consider that the average 1000 ft. of hardwood weights 4½ tons, and that the hoist handled 3,000,000 ft. twice, you can fully believe that no money could purchase the machine from us if we were unable to replace it.

Yours truly,

(Name given on request.)

Choice of either Gasoline or Steam Power



Double Drum Gasoline Hoist (Made also with one Drum)
Made in 2 sizes—6 H.P. and 10 H.P., and either direct Gear Driven as shown, or Belt Driven.

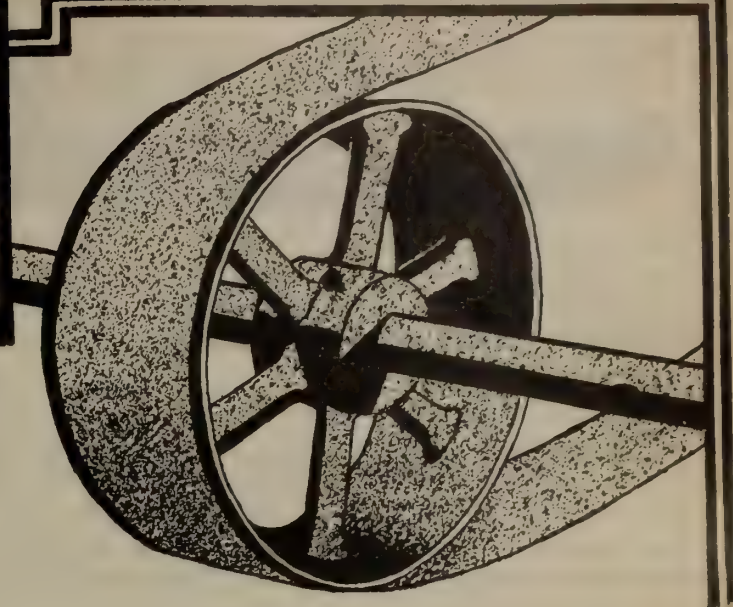
GOODHUE BELTS



"Acme Waterproof" Leather Belting

This brand is especially well suited to the wet places in a saw or pulp mill and will run true as long as it is in service. When you are overhauling your mill equip it with "Goodhue Belts" and you will never regret it. They are honestly made of solid leather—every inch a good belt and they won't stretch.

"The greatest indictment which can be brought against industry in the United States is the charge of waste."

—Quotation from Babson's Report

Can you answer this charge and clear yourself in the tribunal of Competition?
The indictment is particularly true in the woodworking industry and can be laid principally to inefficient kilns.
Analyze the results of this department in your own business and determine what your answer will be.

The Moreau Barker Does the Work

THERE is never any question as to whether the Moreau Barker can handle the work, be it Winter or Summer.

The logs may be 4 inches or 50 inches in diameter, they may be wet, frozen or dry, the Moreau Barker will handle them swiftly and easily, taking off barks, knots and lumps.

The feeding system used makes it suitable to receive and send the logs to the stockyard or to the car by chain conveyor with very little labor. We have an interesting catalogue which explains these and other features in detail. May we send it?

50 Years' Experience
in making better Saws enables us to meet Today's Demand for Lower Prices.
Hundreds of woodworking plants have found that Huther Brother's Patent Dado Heads enable them to save vast amounts in the time ordinarily required for intricate grooving.
The saw consists of two outside cutters and enough inside cutters to perform the required cut. The outside cutters may be used separately or in combination.
The Huther Brother's Dado Head was developed after a thorough study of the needs for a saw of this kind, and as a result can be depended upon to perform creditably at all times
The experience of other woodworking plants can be made yours if you will write for complete catalogue of Huther Dado Heads, or order one on approval. It may be returned at our expense, if unsatisfactory.

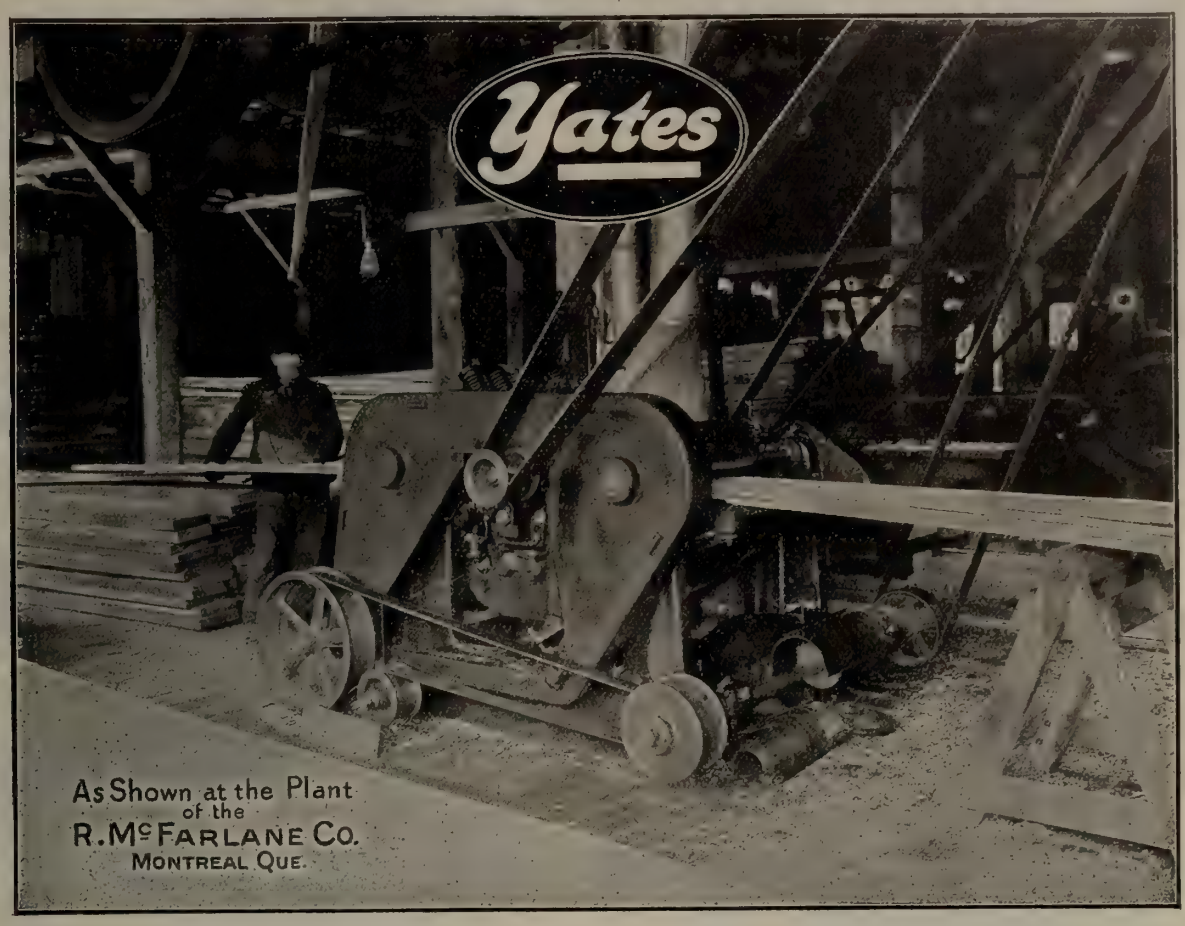
Contractors for **Boiler Settings and Power Plant Brick Work**

We design and construct every description of Furnace Linings, Door Arches and Jambs, and Tongued and Grooved Dutch Oven Blocks. For Furnace Arches of all kinds we supply radial blocks in six different sizes. They make an arch 9 inches thick, and as they are in lengths of 12 and 16 inches, any desired length can be obtained.

Our linings are highly refractory, strongly immune of the destructive influences of sudden thermal changes, and will withstand much compression under high temperatures—three most important qualities.

The Fire Box Blocks are tongued and grooved, and are made in sizes 16 and 18 inches high, and 4½, 8, and 9 inches thick.

All work is under the supervision of Mr. John W. Gates, who has had 35 years 'experience in the designing and installation of Boiler Settings.



"The invariable choice of the man who knows"

No. 177 Double Surfacer

A very compact, sturdy and efficient machine. It is built with the exceptional strength and rigidity which characterizes all Yates' machines.

Will handle the big timbers, as well as stock down to a fraction of an inch in thickness at the fastest feeds and give a fine finish. Built 30 inches wide with 12 inch opening.

We have prepared a Special Circular on the 177. Would you like one to read over? Sent gladly upon request.

P. B. Yates Machine Co. Ltd.

HAMILTON, CANADA

The GeBott Grinder for Band Mills and Resaws

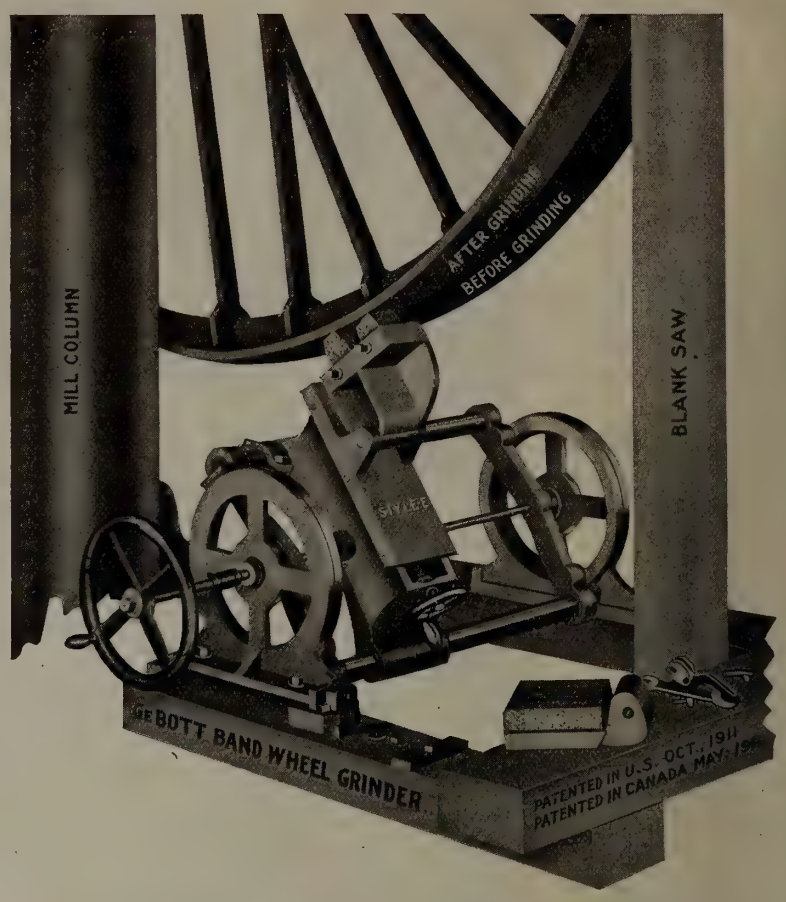
This is the machine that takes but one hour to set, and it will accomplish work in one quarter the time taken by a grinder of the emery wheel type.

It is the only machine made that will grind a Clark Mill without going into the pit to grind lower wheel.

Interchangeable heads are provided for use on either cast iron or steel wheels. No belts or line shafting to contend with.

For Band Mills and Planing Mill Resaws the Ge Bott Grinder is invaluable.

Write to-day for Booklet and prices.



GeBott Manufacturing Company

Big Rapids - - Michigan

Can ship from Windsor, Ontario.

Pulp Mill Efficiency Must Be Increased—

if lowered prices are to come as a result of world wide conditions and particularly on account of competition from foreign producers. You can and must make the one effective answer—greater mill efficiency.

Our New Pulp Grinders—

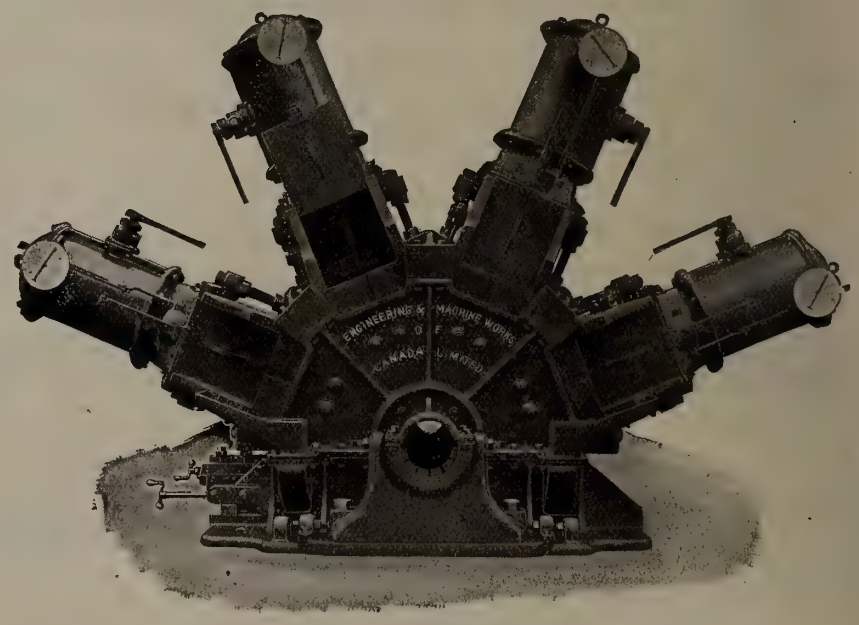
Have many new points of superiority

"Tidmarsh" Patent Pulp Scrapers between the pockets prevent the pulp from entering the following pocket and being re-ground into flour pulp.

"Tidmarsh" Automatic Door Openers open the doors instantly by reversing the pressure on the feet when the wood is ground away. Refilling is quicker and easier which means steadier production.

Packers are tapered lengthwise and crosswise. Wood does not wedge in pockets. Pockets are wider and higher than usual, holding more wood, and not requiring refilling so often. Large discharge opening. Large hand hole plates. Packing gland adjustable from outside of machine while in operation.

Let us send you complete particulars.



Built also in 3-pocket style

Tudhope-Anderson Detachable Lumber Trucks

Unequalled stand-up-ability on tough, rough and soft road-beds are the tests that explain the widespread popularity of these sturdy trucks among lumbermen. Cut shows Front Hauling Gear No. 41 coupled to Hind Gear No. 42. One or more Hind Gears may be attached or detached with ease.

Look at the wide tire steel wheels. They mean easy hauling. We guarantee them. Spokes may be renewed in case of accident—not so with others. Axles are high quality square steel ensuring many years' service. Wood parts are best oak, air-seasoned and kiln-dried. All parts well ironed and braced.

Built to the following specifications:—

No. of Truck	Size of Steel Axle	Tire Inches	Wheels Inches	Frame Length	width
41 Front Gear	1¾" square	4 x ½	26	....	....
42 Hind Gear	1¾" square	4 x ½	42	5 feet	40 inches

Each one must make good the SERVICE reputation of this organization.

THE DOMINION WIRE ROPE CO., LIMITED

There is no *better* combination than Link-Belt >FLINT-RIM< Wheels and Link-Belt Chains.

They fit each other snugly. There is no sliding or slipping as the links seat themselves against the teeth. And they continue to fit each other snugly, because the flint hard surfaces prevent wear.

Measure values in length of service, and you will find there is no *cheaper* combination than >FLINT-RIM< wheels and Link-Belt chains.

Send for catalogue and full particulars.

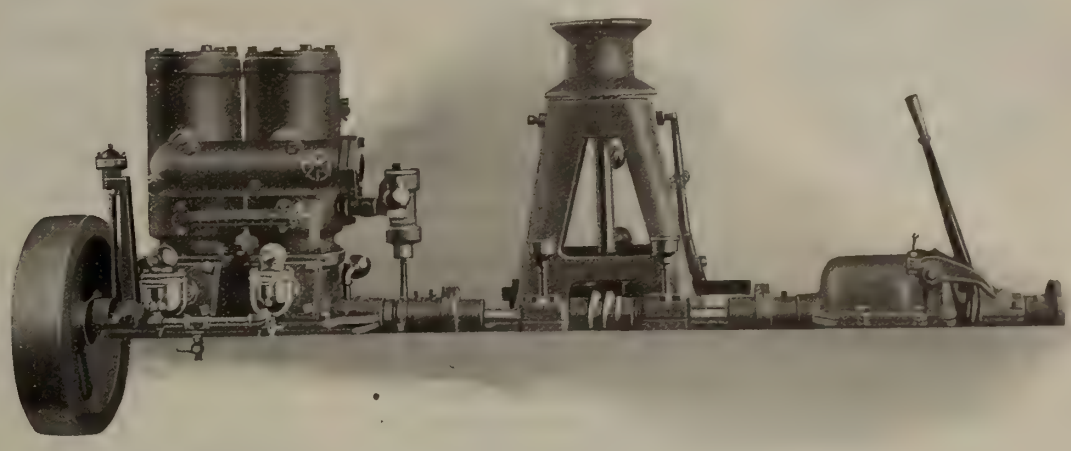
Adams Gasoline Alligator Pointers

Lumbermen find it quicker and easier to work with an Adams Pointer. It is a powerful and efficient gasoline boat that has given satisfaction to the lumber industry throughout the Dominion.

Adams Pointers are made by expert workmen at Penetang. They are easier and safer to use than alligators and tugs. They have a strong, well built, easy running engine and a powerful reverse gear and towing winch that render them equal to the heaviest work, and can be handled by one man.

An Adams Pointer should be included in your equipment. Send for further particulars and blue prints, which will give you full details.



Above cut shows machinery that is installed in a 26'-6" x 6' Special Lumberman's Pointer.

Adams Engine Co., Penetang, Ont.

J. T. PAYETTE, Proprietor

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean, heavy duty work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ⅜ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

All Jobbers or Our Factories in

TORONTO MONTREAL WINNIPEG and VANCOUVER

will be pleased to fill your orders.

THE CANADA METAL COMPANY, Limited

Leviathan and Anaconda Belting
are the lowest in ultimate cost

LEVIATHAN AND ANACONDA
ELEVATING
TRANSMITTING
CONVEYING
BELTING

BECAUSE

of their durability under conditions, ordinary and severe, wet and dry, hot and cold, of the great traction peculiar to their special construction, enabling them to be run slack without slip, thus giving greater arcs of contact and less strain and wear on bearings.

AND BECAUSE

their stretch is minimum and soonest out, leaving a thoroughly "live" belt. Remembering the amount of machinery often dependant on one belt, this saving in shut down due to take-up, means far more than the price of a belt to you.

Every Leviathan and Anaconda Belt is backed by a real guarantee. Leviathan Belts for general service, Anaconda Belts where there is moisture, acid or excessive heat or cold.

Can You Afford to Ignore Their Economy?

Year after year, in mills all over the world, Waterous equipment has demonstrated a unique capacity for service.

This has been manifest not alone in the quality of product this equipment is producing but in the staunch and lasting resistance they exert against wear.

The steady advance of Waterous equipment into wide popularity, their increasingly secure hold on the preference of mill men, spring directly from this essentially practical cause.

Since the introduction of Waterous equipment, over Three Quarters of a century ago, there has never been a lapse in the Waterous policy, to embody in them the highest possible value.

Against increasing costs of production, by repeated and serious improvement, they have held intact their superior measure of usefulness and worth.

Can you afford any longer to ignore the economy Waterous products insure, or deny yourself a kind of service unapproached in any earlier type of equipment?

Because Waterous products and the sincere service behind them afford uncommon satisfaction, more people use Waterous products than any other kind.

Waterous

Specialists in LUMBER and WOODWORKING Plants

HEAD OFFICE: OTTAWA, ONT.

A Fast Feed Matcher Head scientifically designed for matching from 200 to 800 lineal feet per minute.

The SHIMER Fast Feed Expansion Matcher Head

With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings.
These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.
The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.
The circular cutter is then brought to its proper location.

The Cheapest and Best Head on the Market. WRITE FOR PRICES

HARDWOOD LUMBER

THIRTEEN BAND MILLS
SIX PLANING MILLS
ELEVEN FLOORING UNITS
NINE DIMENSION MILLS

ANNUAL CAPACITY:
130,000,000 feet.

RECENTLY we called attention to the improvement apparent in fundamental business conditions. This improvement is distinctly noticeable, but can be made more marked.

The bettered conditions of the present in the main have been produced by those who have pursued an enlightened price policy.

Those who have not co-operated to the end of getting back to a normal plane are the real obstructionists, whether they be labor, supply men, those who deal in basics or the things fabricated from basic materials.

In the industrial realm lumber manufacturers led the way to the plane of normalcy. This fact and the following by others of the example thus set, have been the powerful factors in producing a better industrial condition.

Lumbermen should, in every available way, induce those who have not yet acted to make the necessary adjustments to speed and give greater momentum to business in this period of encouraging outlook.

To our customers we are glad to continue to give scientific service and ever increasing efficiency, in supplying their needs from our unmatched hardwood lumber production.

Exporters of Nova Scotia and New Brunswick Lumber

NOVA SCOTIA STRUCTURAL SPRUCE can be bought for less money per unit of strength than any other lumber. We have it in a large variety of sizes at the lowest prices consistent with good quality.

BOX LUMBER of 1920 sawing is pretty well picked up, but we still have considerable Spruce and Pine. This stock we are willing to sell at a very low price if taken in fair sized blocks and moved quickly.

Get Our Quotation First

When you are in need of hardwood and softwood lumber the wise thing is to "get our quotation first." More than likely we can save you money, because we do a large trade both for local and export market and we always have large stocks on hand.

OUR SPECIALTY IS QUEBEC SPRUCE.

The Louise Lumber Company, Ltd.

Manufacturers and Wholesale Dealers

Head Office: 68 St. Peter Street, QUEBEC, P.Q.

Hardwood

—when you need it

—as quick as you need it

FROM our Logansport, Indiana, Service Yard (near South Bend) we are able to make hardwood delivery in half the time usually required because we have exceptional car facilities.

Our capacity at this yard is 5,000,000 feet —consisting chiefly of Ash, Elm, Maple, Oak, Poplar and Hickory. Delivery of any of these items—all of the highest quality— can be made just as you want them.

And by that we mean that we will fill your order to satisfy you absolutely—you to be the judge of satisfaction.

If You want the Best Value in Lumber Obtainable in the Mountains, Your Choice Should be

Golden Spruce

GOLDEN AIR-DRIED SPRUCE is unequalled for your requirements in Boards, Shiplap, Shelving, Flooring and Siding, and you can rely upon getting DEPENDABLE GRADES.

EASTERN RETAIL DEALERS will find 1 x 8 GOLDEN EXTRA SELECT SPRUCE BOARDS an exceptionally good seller. Can be worked to any pattern desired. Supplied either 3/4 or 25/32" thickness. Try some.

We also manufacture Fir and Cedar.
Spruce, Fir and Cedar Lath.

Just another reminder. Our stock always comes to you bright, clean, and newly milled, being run through the planing mill at time of shipment.

With a daily nine-hour cutting capacity of 180,000 feet, and a stock of 10 to 20 million feet at all times, we are in position to give prompt shipment. Urgent orders given special attention.

This stock is well manufactured, well butted, and was cut early last year. It is strong in 13′ and 16′ lengths. Plump sawed.

We have ten carloads of 1 x 4″ up dr 1s to g. Spruce Flooring and fifteen carloads Roofing.

We have also a cut of about 200,000′ 1″, 2″ and 3″ WHITE PINE, 6′ to 16′ averaging over 8″. This is a bargain for quick buying.

We will quote for Prompt Shipments of Mixed Specifications.

$2,508,724.62

U. S. Epperson Underwriting Co., Quebec, Canada, January 3, 1921.
Kansas City, Mo.

Gentlemen:

We beg to acknowledge receipt of your cheque covering your share of the loss on our plant destroyed by fire on the 5th of December last.

We wish to express our sincere thanks and deep appreciation for the prompt and satisfactory way in which you have settled our loss. The fact that you had sixty days to settle the matter, and that your cheque was sent barely three weeks after our loss, has been noted and very much appreciated by the Bank of Montreal and ourselves.

Hoping for better luck for both of us in the future and the continuation of very agreeable business relations, as in the past, we remain,

Yours very truly,
CANADA LUMBER & BOX CO., LTD.
G. Garneau, Secy.-treas.

ANY Company suffering loss under policies of the LUMBERMEN'S UNDERWRITING ALLIANCE may expect the same kind of settlement as outlined in this letter. Particulars regarding our service may be obtained by addressing the

Cater To This Big Demand

Years of consistent advertising effort has produced an extraordinary demand for BRANTFORD ROOFING in Canadian rural communities.

Lumber dealers, therefore, who would increase business should cater to the market for Brantford products.

The farmer knows that

Brantford
Asphalt Roofing

is the most durable manufactured.

He is familiar with its water-tight, wind-proof, fire-resisting qualities.

He is told in advertising and he knows from experience that Brantford Roofs are the most economical farm roof coverings made.

Nine Good Reasons Why We Should Carry a Portion of Your Fire Insurance

1. Experts are created through specialization. Our underwriting is confined to lumbering operations.
2. Our field men are always at your service to assist you in bettering plant conditions and lowering your insurance cost.
3. We are spending more money in fire prevention work than any other insurance organization in the world, in proportion to volume of business.
4. Our inspections are an important feature of our superior service.
5. All risks must measure up to a high standard morally, physically and financially.
6. Our savings will reduce the cost of your insurance and will protect you from the excess cost of selfish competition.
7. The up-to-date successful business man believes in this form of insurance and we refer you to practically all of the large lumber operators in the United States and Canada, all of whom have our policies.
8. An insurance policy with us is more than an engraved certificate—it is a guarantee that both the spirit and the letter of our agreements will be complied with, and losses are always promptly and fairly adjusted.
9. We offer the last word in fire insurance indemnity, and the "proof of the pudding is in the eating."

The World-Famous

SIMONDS

Crescent-Ground

CROSS-CUT SAWS

Fast and easy running saws are a big help in the timber operation where production counts for everything. If the saws used are the best, it stands to reason that both the sawyer and boss are to reap the benefits. It has been proven that for falling or bucking the Simonds Crescent—Ground Cross—Cut Saw leads all others. It is made of the finest saw steel obtainable and holds its keen cutting edge on the hardest kind of work. Then, too, it is an easy running saw that does nôt bind in the kerf.

Write us about your saw requirements.

Salt Pork!

The most delicious and healthful food to be found in camp

This is a necessary commodity in every Lumber and Construction Camp, and such dealers as are looking for Dry Salt Meats which will give satisfaction and which are reasonable in price should try

Choice Dry Salt Middles

These will be found to be very desirable stock; choice averages ranging from 50 to 80 lbs. and are a most suitable product for feeding to your men, and also for selling over the counter, should you be operating a General Store.

FROZEN BEEF

We are in a position to offer the Lumber and Construction Trade a very superior line of Fresh or Frozen Beef. The frozen stock is of a better grade than Camp Beef, and we would be glad to receive enquiries, as we believe our price will be found quite right.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $3.00 per year, in advance; other foreign countries embraced in the General Postal Union, $4.00.

Single copies, 20 cents.

"The Canada Lumberman" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Getting Out After Results

Sitting down these days waiting for business to come in or arrive is a vice rather than a virtue. To be on the job simply hoping for something to turn up instead of going out to turn up something, does not redound to the credit, enterprise or foresight of any retail lumberman. In the evolution of business, its methods, system and procedure, the day has gone by when customers will come flocking in at the door. Of course, a certain limited amount of trade may be done by hanging out a sign, keeping a stock and possessing a yard and office, as lumber products are, what might be termed, meagre. If the retail lumberman desires to get a vision and a larger conception of things, he should take a lesson from the automobile salesman, gramophone salesman, piona player salesman, the electric vacuum cleaner man, the electric washing machine exponent, the motor truck hustler and other representatives of conveniences which have gone far toward revolutionizing modern life and catering to the commercial or domestic comfort, pleasure or economy of hundreds of people in every community.

None of these things mentioned are what might be termed primal wants or cardinal requirements that are absolutely indispensable. Not one sale out of a score takes place through a person voluntarily walking into an establishment and asking that such and such a contrivance or device be sent up to his house at once. It has all been brought about through intensive and specialized salesmanship, by effective advertising, aggressive publicity campaigns, educational and economic propaganda, and representatives getting out and doing everything in their power to arouse attention and develop interest in the workings of these equipments which are now rapidly becoming household or business necessities. In other words, the taste for the truck, the automobile, the gramophone and the piano player, the vacuum cleaner, the electric washer, etc., has been acquired.

The points presented here might be driven home by a simple reference to the appetite of the ordinary individual. It is said that most of our tastes in the gastronomical line are acquired or developed. We were not ushered into this terrestrial sphere with a taste for olives or onions, oysters or carrots, but the great majority have acquired a liking for these and other similar edibles through seeing others at the table eat them and from coming to the conclusion that if we did not partake of them ourselves we were missing many pleasures that the consumption of certain viands affords ordinary mortals.

The selling of the articles already mentioned has been brought about largely through education, publicity and by representatives developing on the part of the public an acquired taste. Another factor has been the influence of example in seeing what these things are doing for our neighbors. This, too, makes us want to enjoy similar benefits.

The whole question of salesmanship is brought home pertinently by a writer in a western paper who says that he was recently in an automobile office and in reply to the question, "How is business?" was told that while sales were slow, the dealer had a number of prospects on which he was working. He had several representatives whose principal job was to hunt around and find out those in the community who were thinking or even talking of getting a car or a truck. It was learned from the dealer that a large number of the machines disposed of by him annually were purchased through the personal soliciting of these agents, and the influence of the advertising literature of the firm.

Herein the writer draws a very effective lesson, so far as the selling of lumber is concerned, for he intimates that there is a valuable lesson in this for home-selling agents in the country town lumber yards. The proposition of selling homes and building improvements is practically the same as everything else that numerous people have not but would like to have. Lumbermen should get rid of the idea that their business is different from others in this respect. There is really no variation in playing the merchandising game, which largely consists in the usefulness, economy, service and convenience of an article, and in this the home and home building are paramount.

Confidence is Gradually Increasing

If there is one element needed more than another to impart stability to the lumber market to-day it is confidence in the assurance that prices have reached bottom. Although it has been predicted many times that there would be no further drop in quotations, still this has been witnessed so often that all prophecies now go by the board and the public will not become convinced that descending values are ended until there is an upward movement in prices. Just when this will come, no one can say with any degree of certainty.

A well-known business economist has stated that by postponing building operations until next fall, construction may be carried out one-third cheaper. Others have declared that now is the time to build as values will never be at a lower ebb and any delay will only result in adding to the ultimate cost. Thus we have the diametrically opposite views with many intervening ones, and it appears to be a case of where each one, both in his own business and in the home building line, will have to exercise individual judgment. Much, of course, depends upon the necessity for action and the purposes for which a building will or can be used. It would seem, however, that now is the best time to go ahead with structural work, as when demand reasserts itself, there is bound to be an ascension in the figure for lumber, and there is apparently little doubt of other materials coming down much more than they have.

Many manufacturers of certain products have come to the conclusion that reduced prices do not add to the activity of the market or the acquisitions of the article itself, for the simple reason that, no matter how cheap material becomes when consumers are asked to buy, they will hold aloof just as long as they feel or think that the commodity may be procured for slightly less. A falling market is beneficial to no branch of industry and is as unstable a foundation upon which to build a solid progressive business as sand itself.

When contractors, builders, home-owners, real estate men and others are firmly and fully convinced that there will be no more immediate reductions in freight rates, that wages will not be further decreased, that labor itself is as efficient as it was before the war and that lumber, brick, cement, glass, tile, hardware, roofing material and everything else will go no further down the ladder, then and not till then will there be a marked tendency upwards, and a new

life in business. In the meantime, while some orders are being placed for many lines and a considerable amount of building undertaken, particularly in the house arena, there is in some sections an innate feeling that prices are inclined to ease off a little more.

The expected revival is not here yet and there does not appear to be an immediate return to anything like a boom, although it is generally conceded that the worst in the way of inactivity and depression is over. From now out a better state of things should prevail.

Labor Responsible for Present Inactivity

Labor, in its present general attitude, is, to a greater degree than any other factor, responsible for the inactivity in the construction industry, says the "Contract Record," in a comprehensive review of the building situation, present and prospective. Continuing, it says:—And it is just as undeniable a fact that building will continue to be thus held up until labor adopts a saner viewpoint. Just why the building trades in a period of depression can persist in demanding increased wages is beyond power of comprehension, especially when it is obvious that by such demands they are only working themselves harm by placing a greater damper than ever on construction work. Only an aggravation of the industrial inactivity that is being felt universally to-day can result from any tendency for costs to go up, for people are determined to wait till prices decline and no work but the absolutely essential will proceed in the face of a movement toward increased prices.

Materials are receding in price and in some localities labor has accepted a reduction in wages. This will have a very stimulating effect on building and is bound to encourage people to start on the projects which they have been holding up pending some indication of a recession in prices. But while these wage reductions have been taking place, they have not in all instances been accepted gracefully and strikes have been threatened as a lever to carry the unions' demands for an even higher scale of payment than prevails nowadays. Disaster is sure to follow with the trades feeling the pinch the greatest. Just what effect on the construction industry will result may be illustrated by the situation in Chicago as explained by the Contract Record's representative in that city. He points out that $100,000,000 worth of work in Chicago alone is pigeon-holed pending the result of the skilled laborers' demand for $1.25 an hour. Should they accept $1.00 an hour, this work will forthwith proceed, but labor seems content to sacrifice the possibilities of a prosperous construction season, with plenty of work for all, for an increase in wages. Should the unions' demands meet with success, this $100,000,000 worth of work will continue to be held up, with a consequent increase in unemployment.

Unemployment is a serious problem these days, but labor, in demanding wages even higher than those current in the past year or so, is merely making a bad situation worse and more difficult to solve. With conditions as they are at the moment, public sympathy cannot be allied with labor in its fight for higher wages. The tide has turned and labor must show its willingness to share some responsibility and be prepared to accept lower remuneration in order that business may resume and public confidence be restored.

Tree Planting in the Breezy West

The development of tree planting on the wind-swept prairies of the west is the mission of a special car which left Ottawa for Calgary last week under the auspices of the Canadian Forestry Association. The car is not connected with any government department or commercial interest, but is one of the enterprises which the Canadian Forestry Association has put into effect in the course of its widespread educational campaigns.

Inside the car, instead of the ordinary seating accommodation, is a row of about 120 seats, rising tier on tier, like a collegiate lecture hall. In this are delivered lectures on how to start tree planting, the value of shelter belts as protection for crops and live-stock, and other aspects of arboreal work on the prairies. The car is self-contained in every way and has its own electrical plant so that when it arrives at some small out-of-the-way spot on the prairies, it is able to present motion pictures without being dependent on local resources.

The method of procedure is to travel over the western prairies and stop at centres where it is evident that there is need of tree planting. In advance the advent of the car has been advertised, and the co-operation of all public organizations likely to help is enlisted. Afternoon and evening lectures are delivered; local problems are discussed and questions are answered. Moving pictures, which are shown, illustrate the whole process of tree-planting from the seedling in the nursery to the ultimate mature tree. Sixty million seedlings have been successfully grown on the prairies, and the association has some fine photographs of well-wooded areas that were formerly bare and open. The result in these areas has been that it is now possible to grow fruit and produce that formerly could not withstand the wind storms.

The lecture car was outfitted at Ottawa and was sent to Montreal for a day's inspection when Lord Shaughnessy and E. W. Beatty, chairman and president of the C. P. R. respectively, paid it a visit and expressed great interest in the project. Robson Black of Ottawa is in charge of the Canadian Forestry Association's educational enterprises which, in Eastern Canada, are mainly concentrated upon the prevention of forest fires through winning popular co-operation.

Some Editorial Short Lengths

Hon. W. E. Raney, attorney-general of Ontario, has intimated to the executive of the Ontario Retail Lumber Dealers' Association that it will not be possible for the Provincial Legislature to pass such an important measure this season as the Mechanics' Lien Act. The bill has been given a second reading and sent to a Special Committee. This committee will give the proposed measure due consideration between now and the next session, and there appears every hope that the proposition will be endorsed and passed in 1922.

Several M..P.P.'s have replied to letters from members of the Ontario Lumber Dealers' Association, intimating that they are strongly in favor of the bill and are satisfied that it will successfully get through its third reading. A few state they have gone into the various clauses to some extent and regard the piece of legislation as a reasonable one. They will be glad to assist in pushing it along and see nothing objectionable in any of its provisions.

While the O.R.L.D.A. has not been able to get the measure adopted during the present session, the fact that such splendid progress has been made and such hearty encouragement received, augurs well for its final adoption. The Special Committee will sit during the recess and consider every phase of the Act with a view to having it carried next session.

"Going to the dogs." Impending calamity is the most industriously press-agented commodity in the world. Its agents are "walking delegates," in the guise of far-seeing Solomons. They have private ouijas doing constant and ominous handwriting on the wall —messages the "prophets" invariably translate into "Business is going to pot, and the country to the dogs." Six thousand years ago when Adam left the Garden of Eden, the calamity press agents started. They circulated the report that Adam, the human race and the universe were "going to the dogs." Yet, Adam founded agriculture, the world's greatest industry to-day—the world is still at large and prosperity is just ahead, Louis K. Liggett remarked in a recent optimistic address. Mr. Liggett as head of one of the great chains of retail stores does not base his optimism on theory but on facts. His clear picture, which comes of the same vision that has made him one of the world's big men, is: "The process of liquidation may take eight months with the retailer, and by that time you will come to the first of May and his stocks will be bare and you are going to have a duplication of the condition in the spring of 1914. The manufacturer will have liquidated by running half time or no time at all. He will have liquidated out and then suddenly, with all their shelves bare, business will begin and you will have a renewal of rising prices —I am as sure as I stand here that you are going to have prosperity again, no matter what you do, by the first of next May."

Austin & Nicholson's new sawmill at Dalton Mills, Ont., which has begun operations for the season.

Some Things I Saw in Timberlands of North

Several Firms Conducted Active Logging Operations During Past Season Which Was Favorable One—New Lumber Town Springing Up at Dalton Mills

By G. W. Visser

One of the busiest lumbering districts in Eastern Canada is in that part of Ontario lying west of longitude eighty. Operations did not begin in this area until a number of years after the C.P.R. had passed through, and, naturally, were confined to within hauling or driving distance of the railway. Some timber, however, was driven to Lake Superior, but not a great deal.

Later on, and especially after the Grand Trunk Pacific, the Algoma Central & H.B.Ry. and the C.N.R. were built, a vast new area was opened up, and like the earlier limits, was rich in jack pine, spruce, balsam and a fair amount of white pine. Soon, operators and jobbers camps dotted the forests which paralleled all four roads and it would be interesting to know the total output, each winter, from the country lying between Fort William and Sudbury.

It has not yet been my privilege to visit any more than a small portion of the timberlands of Northern Ontario. So far, I have only covered the camps connected with the main lines of the C.P.R. between Cartier and White River, a distance of about 270 miles.

In this stretch there are four large operators. The Spanish River people at Benny, Ont., P. & J. Shannon at Biscotasing, The McNaught Lumber Company at Pine, Ont. (near Chapleau), Austin & Nicholson —head office Chapleau and Mills at Dalton Mills—and Nicholson and Hennessy & Co., operating some twenty-five miles south of Nicholson, with offices at Nicholson.

The McNaught Lumber Company have kept two fairly large jobbers busy and the firm have a fine, up-to-date mill at Pine. They cut mostly deals and lumber and their holdings consist to a considerable extent of large pine. Quite a village has grown about the mill, boasting of a store and a school, situated about a mile from the C.P.R. tracks.

The Spanish River Lumber Co., at Benny, also run high on deals and lumber, while Messrs. Shannon cut both ties and lumber.

The Hennessy boys (Fort Colounge) just started last winter and up to the present have been confining their efforts largely to pulp wood with some ties. They will drive the pulpwood over to the Algoma Central Railway for loading and their ties to Dalton Mills. Their limits have a good showing of white pine.

The most extensive operations, however, are being carried out by Austin & Nicholson. They have put one town on the map—Nicholson, Ont.—and are at present beginning another which bids fair to surpass the first. Nicholson is about an hour's run west of Chapleau and has a first class general store, post office, a good school with an attendance of about thirty and a church.

The mill there is a single mill, mostly producing ties. It, however, has a fine showing of lumber and lath. It runs during the summer months only and employs in the neighborhood of 150 men, working two shifts. The manager of the mill which draws most of its logs from Brownlee's camps is C. Sheffield.

One Jobber Cut 120,000 Logs

Mr. Brownlee is one of the crack jobbers of the country and a short sketch of his operations this winter may prove interesting. He has been cutting about twenty miles south of Nicholson and a series of fine lakes allow the logs to be towed to Nicholson. During the past winter he cut and hauled about 120,000 logs, of which perhaps one-third are suitable for lumber. Employing over 120 men and with sixteen teams on the haul, the camp was indeed a hive of industry when I visted it in March.

There I made the acquaintance of some of the few remaining simeon-pure lumber jacks. Swaggering, debonnair—felt hat cocked at an impudent angle on their heads—they worked like horses and when there was a ten minute wait, they were just like kids, wrestling in the snow and playing practical jokes on each other. Truly, it was no place for a poor sport.

Brownlee's leading team got away at 5 a.m. with a load which had been loaded the night before; the next three teams did the same.

The interior of Austin & Nicholson's new sawmill at Dalton Mills, Ont.

By that time the toppers-off had more loads ready and team after team took off, down the six mile ice road. This road had only one little rise in it, where a towing team was on duty. When the lead team got back to the topping off skidways, the teamster merely unhitched from the empty sleigh and hooked on a load which was waiting for him. Less experienced teamsters took the empty sleigh to the woods for the light load that was suitable for snow roads. This system kept the best teamsters on the ice haul and as a result, wrecks were few. Moreover, if an ice haul teamster fell down on his work once or twice, back he went into the woods in disgrace.

The New Town of Dalton Mills

My visit to Dalton Mills was most interesting. Work was begun in September last by the contractors, Sherwood & Sherwood, building

The well-equipped sawmill of Austin & Nicholson at Nicholson, Ont.

Hauling ties from one of the smaller camps in Northern Ontario

a railway over three miles long from Dalton station to the mill site on Shequamka Lake, and the mill and dwelling houses will be all ready about May 1st.

This mill is a combination mill, having an automatic tie mill, a double edged band saw for lumber and the usual equipment of re-saw and lathers. At the top of the jack ladder are two sets of niggers, one set throwing the logs to the saw mill, the other to the tie machine. They are controlled by the checker. The tie mill consists of an endless chain, equipped with high dogs, which engage with the logs forcing them through the adjustable saws. The log emerges, slides down, at right angles to its former course, to the automatic butting saws, which cut the log into eight foot lengths. These saws may be adjusted to cut any length. Here stands the tie inspector, who next does his neccessary but sometimes painful duty. The ties now drop onto another endless chain that takes them right to the car door where their itinerary is completed by the loaders. From the water to the car door only one man is required.

The Dalton mill has a capacity of about 8,000 ties and 160,000 feet of lumber in twenty-four hours. It is, roughly 180 feet long and 50 feet wide and is equipped with a 500 h.p. Waterous engine and three Waterous tubular boilers 72x18. Six dwelling houses, two fine sleeping camps, an office and dining hall have been erected in addition

Some of the first houses erected at Dalton Mills, Ont., where Austin & Nicholson have started a new lumbering town. A comlete village will be built here for the accommodation of the employees of the sawmill.

to the mill building at Dalton Mills. The sleep camps have iron spring beds installed and also sanitary indoor latrines. Altogether it is a most modern plant.

Splendid Season for Logging

The past winter was a favorable one for lumbermen. A long, warm fall was followed by a quick freeze-up, a mild winter with not too much snow and yet cold enough to keep ice roads in good shape. The fact that the snow lasted till well towards the end of March, gave every one a chance to get their cut out. I do not think there was a log left in the bush this spring.

Labor, generally speaking, was steadier last winter than for some time past, due, no doubt, to the scarcity of work in the cities. The cut in wages had practically no effect on either the quality or quantity of the men. The lowest wages paid to ordinary bushmen was $65.00, teamsters got $100.00 to $110.00 and tie makers 17 to 20 cents.

Strong efforts are being made toward better fire protection and conservation in this district. The measures taken are not so good but what they might be better. I do not think many serious losses occurred, although one fine burned its way from the Algoma Central Railway across through Nicholson's and Hennessy's holdings and caused considerable damage.

There are many years' cut still left in Northern Ontario and a wonderful supply of young growing timber that will mature for future generations. It is hoped that every Canadian will put forth every endeavor to bring around better fire protection and urge conservation so that our heritage may not be slowly destroyed.

The Essentials of Good Dry Kiln

"We do not think that anyone," says a correspondent, "disputes the fact that heat, circulation and humidity are required for successful drying; heat to bring the moisture to the surface and evaporate it, also to aid in maintaining the circulation; circulation to carry the heat to all parts of the kiln and to carry away the moisture which has been removed from the wood; humidity to retard the surface drying and thus prevent checking and case-hardening. Live steam is used to relieve any stress or strain which may be in the surface of the wood and also to quickly raise the temperature of the wood to the initial drying temperature. The only difference is that different manufacturers have different theories or different methods for maintaining and controlling these factors. Why not assist us in this work by publishing good practical general articles dealing with different phases of kiln-drying work. Many owners of dry kilns spend good dollars to instal a kiln, then think that that is all that is required, and permit their kilns to deteriorate. There should be scope right here for much information, and it might be that the lesson would be well received. It could be shown how a kiln deteriorates through neglect; how money is thrown away by neglecting the kiln and what the owner should do to prolong its usefulness and maintain it at its highest efficiency."

What Canadian Forestry Association is Doing

The Canadian Forestry Association, Ottawa, states that it is carrying out an extensive programme this month as follows:

Reaching scores of thousands through the newspapers with positive fire prevention propaganda.

Instructing the children of thousands of public schools in care with fire in the woods.

Impressing fire protection through railway menu cards, printed forms in cigarette packages, etc.

Public meetings of business men on forest protection.

Our Tree Planting Car has reached Calgary with two demonstrators for a long season's work in the southern prairie provinces.

Our Forest Products Exhibition Car is now being built up for the tour. This car is entirely re-equipped this season and will be invaluable as an educational method.

Our Travelling lecture sets are invading schools in new localities carrying a strong influence for forest protection.

Our Speakers Bureau, increased to five-hundred members, is delivering forest protection addresses to schools and adult gatherings.

Every educational method within our ability to afford is being actively employed to head off the forest fire season.

Arrangements are being made for a Forestry Convention in British Columbia.

One of the Factors always to be valued highly in the Canadian Forestry Association is the membership of 12,500.

How Lumber Dealers View Building Outlook

Business During Past Season Has Been Quiet But Considerable Improvement is Reported From Many Centres— Stocks Low and Prices Rather Uncertain

At this particular season of the year, when building prospects in the various cities and towns are usually surveyed with regard to the operations during the coming summer, it is interesting to learn how lumbermen look upon the present situation. So far no boom has manifested itself in any of the larger or smaller centres but the general structural outlook appears more promising than it did a few weeks ago. Much of course will depend upon the attitude of labor during the month of May and whether industrial concerns will operate on a larger scale as the majority are running now only to partial capacity.

With a view to getting some first hand information concerning the status of affairs in the various provinces, the "Canada Lumberman" got in touch with a number of representative dealers at various points, and it is instructive to read what they have to say. While 1921 will not be a banner year, still it is expected that business will improve gradually from this out and that the result on the whole may be much better than expected when the books are closed on December 31st next. Stocks for the most part, are less than a year ago and lumber prices have dropped considerably. Practically all wood products merchants and manufacturers report an upward trend in business, a start being made at many points in the annual spring building programme.

O. C. Anderson, Bury, Que., states that both the softwood and hardwood markets are quiet and only a few enquiries are coming in at present. A revival in conditions is looked for any day now and he expects to sell his stocks sawn to order for building material, a building boom of considerable size being reported in the city of Sherbrooke.

Considerable Work in Prospect

Chappells, Limited, Sydney, N.S., report building operations a little backward for this time of the year with the demand for lumber dull, prices remaining at a low level with no change expected in the near future. Their stock is heavier than any previous year owing to the taking over of Rhodes-Curry, Ltd., of Sydney, N.S. Chappells are not putting on any special selling campaign but have reduced prices to a fine margin of profit and the intention is to decrease stocks until business becomes normal. The addition of the property occupied by Rhodes-Curry, Ltd., provides about 150 ft. of private sidings and more than double the warehouse and storage space. They are running both retail yards and if business demands, will operate the recently acquired wood-working plant, it being motor driven.

Standard Construction Co., Limited, Halifax, N.S., display optimism when they report building activities dull during the past winter, but with the opening of spring anticipate considerable building. A number of large jobs are now up for tender in Halifax and the architects of the city advise they have in preparation a considerable quantity of new work, which it is hoped within a few weeks will revive the building industry. Up to now there has been practically no demand for lumber and it is the opinion of the trade that prices will go no lower. Stocks are heavier than last year and this too applies to contractors.

G. W. Lantz, Bridgetown, N.S., writing the "Canada Lumberman" says the local lumber trade is quiet this spring with few inquiries coming to hand. At present Mr. Lantz is sawing stock for apple barrels, of which he has the usual quantity in the yard. Very little building is being undertaken in the district, only the necessary repair work being done until values become stabilized.

Optimistic Regarding the Outlook

Victor Varin, Montreal, is optimistic as to the outlook this spring and reports business better than last year at this period. The lumber supply is plentiful with prices partial to reduction, but values are not expected to vary to any extent until the summer season is over. Building activities in Montreal this spring are greater than was expected, many builders feeling that prices in most lines of materials will not be reduced for some months at least.

Charles Layton, Sydney Mines, N.S., says: The outlook for building is rather discouraging in Sydney Mines at the present time, the mines and steel works being closed down for an indefinite period. I am confident within a month that things will change for the better, and the year end up with good results. My stock is light compared with last year, and I find it much easier to buy than to sell.

S. Comeau, Concession, N. S., declares that the demand for lumber in his district is very poor this spring. Lumber that last year was selling for $48 is now sold for $22 to $25 a thousand and finishing material is not brisk. Mr. Comeau states his stock this year is seventy per cent. lighter than last year and is inclined to believe that prices will still drop. Instead of making any improvement on manufacturing facilities he is letting things remain for the present until the market looks brighter. Shipbuilding that was flourishing two or three years ago is practically dead.

Conducting Live Publicity for Trade

J. P. Abel, Fortin Limitee, Maisonneuve, Que., say that they are of the opinion that 1921 will bring a great demand for building material especially within the next few months. Present indications tend toward an increase of trade. They report that prices in their section have been lower during the past few weeks with the exception of white pine, and may come down more as a number of dealers have not yet disposed of last year's cut. Continuing they say "Our stock is about the same as last year and we are using considerable space in local papers to cultivate and develop new business. We are contemplating the erection of a new building for the storage of all our dressed lumber and finished material and also new equipment such as motor truck, etc., for our shipping department."

Smith Lumber Company, Limited, Woodstock, N.B., report that the local trade has started in fairly brisk, but so far is only along repair lines, no house building being started, although several buildings are under contemplation with the aid of the local housing scheme. Prospects for building and repair work in the country districts do not look good, with potatoes selling at 50c per bag, and hides at 1c to 3cts. per lb. The outside market at present is stagnant. The town of Woodstock is considering sidewalk building to aid the unemployment situation. The intentions are to make the foundations for the sidewalks and finish off with cinders for the present. If cement comes down in price as lumber has done, the sidewalks will be completed at an early date. Continuing, W. M. Smith says, "There is no question but steel, cement, bricks and all kinds of building material will have to descend as lumber has, before there is any building boom in any part of Canada. Labor can go on strike as much as they like but they cannot hold wages where they are to-day in the building and other trades where labor is organized, while there are millions of men all over the world with nothing to do. With reference to the U.S. Emergency Tariff to keep the cost of living up in their country, they expect to manufacture all classes of goods and machinery to ship to countries against which the exchange is adverse as well as their embargo tariff. You would think to hear some of their senators speak that their farmers were the only farmers in the world and as long as their purchasing power was maintained their country could ignore the rest of creation, but believe me they have something to learn yet."

Frank Blais, Amos, Que., states building activities in his district are about the same as last spring. Enquiries are beginning to come in, but these are merely feelers, few sales resulting. Mr. Blais reports his stocks 50 per cent. larger than last year, while some seventy sawmills in the district have about 50 per cent. less than last year. Spring trade does not look good, labor and high freight rates killing what otherwise would be a fair market demand if the product could be hauled out cheaply. He does not hold much hope for better business till some time in the fall when the big mills will all be operating again. Mr. Blais is completing a new pulp wood slasher which will be running this month.

Production Will be Smaller

Newville Lumber Co., Newville, N.S., report a stagnant market in this section of Nova Scotia. Stocks on hand are heavier than last year owing to lack of cars when the demand was good. No extensive improvements will be undertaken, although some are contemplated, until the market justifies such a move.

W. H. Duffy, Sons, Limited, Hillsboro, N.B., remark that the demand for lumber in their district is extremely dull with no definite market price, which places the merchants in a quandary. They also report that prices will go still lower, unless U. S. buyers come in and purchase on a liberal scale. Last year there were orders on hand for all the lumber stocked, while now a carload order seems quite an event. Production this year will be about 30 per cent. of last year stock.

Poole & Thompson, Limited, Montague, P.E.I., report building operations in their section of the island very limited this spring,

owing to the unsettled condition of the labor problem and the general depression in the lumber business.

Lynch & Fournier, St. Quentin, N.B., carry stocks consisting of cedar ties, telegraph poles and spruce pilings. The general stock is heavier than last year although fewer cedar ties are on hand.

Piercey Supply Co., Limited, Halifax, N.S., state that during the last few weeks, renewed activity in building operations in Halifax has begun, but so far is largely confined to dwellings being built by the Housing Commission and remodelling. There is however, fairly large new work in prospect. Taking the season as a whole, they are of the opinion construction will be carried on quite briskly. The demand for lumber and other building supplies has as a result brought about increased sales to some extent, but they have not as yet approached the volume of a year ago. Stocks are lighter than they were last spring, and they consider it good business to continue reducing the inventory for some time to come. They have not increased their manufacturing equipment to any extent, but expect to install a new dry-kiln with a capacity of forty thousand feet.

How Other Easterners Size Up Matters

Glennie & Mattinson, Oxford, N.S., report building operations quiet with practically no preparations being made for a revival in the near future. Stocks are much lighter than this time last year, only 30 per cent. being carried of last year's total. No selling campaigns or improvements were started owing to the uncertain market conditions and the necessity to cut down expenses till more propitious times warrant a large profit on turnover.

T. Prefontaine & Cie, Montreal, do not look for any speedy revival in the construction trade, owing to lack of confidence in the stability of prices which will take some time to get back again, but they look for better business about August or September next.

John H. Holmes & Son, Doaktown, N.S., say that building operations are not as brisk as a year ago but will be above the average if the large number of plans being prepared is any indication. At present the demand for lumber is practically dead but a livelier requisition is looked for with the present prices prevailing. R. S. Holmes states they have more lumber on hand, than ever before carried over the winter, but the cut for the coming summer will not be half of last season's. The pulpwood business has very nearly ruined the Doaktown district, many machines being installed for rossing with shipment impossible owing to embargoes, etc.

J. & V. Hickman, Limited, Port Elgin, N.B., report the demand for spruce lumber exceptionally good, the bulk of the sales being made in Great Britain and the United States. Sales, however, have been very few so far this year and large stocks have been carried over. J. H. Hickman further states their stock is heavier this year than last owing to the dearth of foreign cars to load the stock. Prices are not expected to go any lower and a re-adjustment is now looked for, at an early date. A recent addition to the Hickman plant was an extension of 50 ft. by 32 ft., with filing room 12 ft by 24 ft. They have installed in this building a No. 341 Yates Resaw, a Yates No. 177 Double Surfacer, and propose putting in a matcher for spruce. The cut at Port Elgin is very small, not more than one-third of last year. Many lumbermen are now engaged in stream driving, and should have logs in booms in a short time.

Expect Very Fair Season's Trade

The Royal Lumber Company, Montreal, state their stocks are heavier this year than last and find the demand is on a par with 1920. No special publicity or selling plans have been undertaken but the prospects for a fair season's business are bright.

Stanley Douglass, Limited, Fredericton, N.B., are rather chary about making any promises regarding the building industry at present, labor being so unreliable and high. Prices are believed to have reached the bottom and the next move will be upward. Continuing, Mr. Douglass says: "We have carried over about the usual amount of sawn lumber from last season. Our cut of logs for the coming summer will be about one-half of what it was last year and will all be manufactured at our South Devon mill. Our Stanley mill will not operate. We are adding a resawing and planing mill to our equipment at South Devon and expect to have this ready for business sometime in May. We will then be prepared to get out finished lumber in any way the trade may desire."

L. O. Grothe, Limited, Montreal, says that the price of cigar box lumber is lower than last year. They are keeping their stocks low as they expect prices to continue on their downward movement.

Believes Prices are at Bottom

Henri Peladeau, Limited, Montreal, report building operations slow and as a consequence the demand for lumber is nothing like it should be for this time of year. "However," continues Mr. Peladeau, "we are of the opinion that the lumber prices are now about as low as they can go and we are advising our customers to purchase for near future requirements. Our stock is much heavier and in much better shape than it has ever been and we have lately made heavy purchases of high-grade stock. We are following up all possible prospects as closely as possible this spring and are insisting that our service and quality is of the very best in every sale we make. We have subscribed to the McLean Building Reports and are trying them out for results. We have made big additions to our storage sheds and feel that we are in a good position to handle all business we can find."

Have Been Busy in the Factory

The Ross-Taylor Co. of Exeter, Ont., declare that business up to March 31st was not very satisfactory. "We had no trouble to keep our factory going, as we had considerable work to do on our last year contracts," they add, "what work we have received up to date we have had to go after it in order to get the contracts. There is a tendency on the part of the intended builder to wait for lower prices. During February and March, we did more estimating than we had done during the same period for years, with little results, but we find a marked improvement during the last two weeks. We attribute some of this to our missionary work of February and March, although it must be admitted that part of it may be owing to reduction in price of rough material, which has helped to cut down the cost of building. With respect to the lumber, lath, and shingle part of our business there is practically nothing doing up to the present. We are carrying only what stock we need to keep our yard in shape to supply what we think will be required for our trade, and do not anticipate any large demand for material in any line.

Respecting prices, it is hard to form an opinion on this matter. There are so many factors to consider. Personally, we feel that prices on rough material will remain about where they are now, and we look for a weakening in the better class of lumber in the near future, as it appears, to be reasonable that if the lower grades have been reduced 30 per cent. that the better grades will have to be reduced also if there is to be any amount of business done this season."

Building Will be Restricted

Flemming & Gibson, Ltd., Woodstock, N.B., say most of the mills in their locality have been idle during the winter and will operate the coming season with a much smaller cut of logs than the average yearly output. Building operations will be restricted as the feeling prevails that labor and nearly all material will be cheaper in another year. All the lumber moving from that part of New Brunswick finds its outlet in the New England market. Prices are about fifteen dollars per thousand less than twelve months ago with no hope of advance and possibly a further decline. Saw mill operators are taking substantial losses. Stumpage rates were increased on the 1921 cut, and freight rates jumped during the past year. Logs cost about the same to cut and deliver at mill but manufacturing costs are somewhat less than a year ago. Continuing the firm say that the shipments made at the present time will cost them about three dollars per thousand more delivered in New England than one year ago and the return will average about fifteen dollers less per thousand feet. The two mills of Flemming & Gibson have been in operation since January 1st and shipments larger than last year, but the quantity of lumber on hand is less than a year ago. In conclusion they do not look for much lower prices as such would render imperative a greater cut in wages than is reasonable having in view the present cost of living.

More Lumber is Now on the Move

In reference to the building prospects in the Orillia district, J. R. Eaton & Sons state that there is a good deal of work under consideration. The actual placing of orders for material for construction is backward, and while the weather has been favorable for the commencement of new work, those interested in building seem to be holding off until they are quite satisfied that prices have struck bottom.

J. R. Eaton & Sons also add that while there is not very much lumber moving, there has been a marked improvement in this respect during the past month. They do considerable milling in transit in Orillia, and as the number of cars are increasing, this would indicate that in many of the smaller towns the dealers are putting in a few cars of stock.

Ludlam-Ainslie Lumber Co., of Leamington, Ont.—Building operations have scarcely started here. There is probably less than half the work now under way, or contemplated, that there would have been even earlier than this in normal times. This is due partly, as a result of the shortage of money, but aside from this the idea seems to be generally held that the reductions in building costs are an indication of further reductions to come and that money will be saved by holding off for a time. The only improvement that we have made in our equipment is the construction of a siding to serve a yard to which we have hitherto had to draw the stock.

Business in the North is Good

The Laberge Lumber Co., of Sudbury, Ont., report that business is decidedly better than it has been for some time. There is not a great deal in the way of large contracts, but there are numerous repairs and small jobs which on the whole, require a large amount of

building material. Our stock is lower than last year, but we are replenishing it as trade is considerably better than we anticipated it would be.

Robert Light, Napanee, Ont., "Building operations in this district are confined principally to alterations and additions to existing buildings. New construction is limited just now but we expect an improvement later in the summer. Prices on dressed material are about the same as in 1920, but the quotations on rough and dimension have dropped $5.00 to $10.00 per M feet and have a tendency to remain there. Our factory work and wages are about on a par with the same period in 1920 and of dry lumber we have a good supply."

Finds Advertising Brings Business

A. L. McDermid & Co., Apple Hill, Ont. Building operations in our district are fairly good. Building material has been moving well with us although some people are inclined to think that the reduction in freight rates may reduce lumber a little in price. Our stock in the retail yard is about the same as last year. We are trying to carry just the amount required for immediate requirements. The stock for wholesale trade at our mill is larger than last year. We have not added any changes to our manufacturing facilities but intend doing so before the close of 1921. We are carrying an advt. in our local paper in connection with our retail yard which we find paying us as it has already brought in several inquiries from other sections.

This is Opportune Time to Build

S. Anglin & Co., Kingston, Ont. Business in our district is not in a very flourishing condition at the present time. Some of our large industries are closing down and a number of the large boats that wintered here are not being fitted out for the coming season. Building permits for the last two months have been much less than usual. There are no public buildings being undertaken and most of the work being done is confined to a few small residences and repair work. Farmers have not begun to buy very largely as yet. We believe prices are affected much more by general than by local conditions and think that the conditions prevailing in the Southern and coast mills at the present time have a tendency to depress prices in Ontario. We are not looking for any further drop in the present season as we believe that reduction is entirely dependent upon transportation and labor. We feel that the lack of employment will necessitate further reduction in wages. When wages have reached normal values as compared to commodities, then we will look for a resumption of building activity. In regard to our stock would say that it is considerably heavier than last year at this time. This applies more especially to low grades as we are carrying a large stock of used pine in 1 in. and 2 in. We have no special selling plans, although we feel that customers should be advised that this is an opportune time to build because of the plentiful supply of all classes of labor. An improvement which we made to our premises a year ago, is a garage building capable of housing seven cars and trucks. This enables us to do our own motor repairing and we are finding it very satisfactory, as we get prompt service and we also know exactly what is the matter when our cars are out of order. We do not consider this a good time to increase our plant and equipment but we have during the year, added a large four sided planer and matcher to our equipment. We also have improved three of our planing machines by taking out old ones and replacing them by new ones.

The Guelph Lumber Co., of Guelph, Ont., James Harrison, manager, assert: As to the outlook for business this spring, we find in Guelph and vicinity that sales are slower than usual for this time of the year. On the other hand we are doing an extra amount of figuring on new work, but one cannot say whether this new work will go on. Whether values will remain stationary or otherwise, the volume of business this spring will be a great factor in determining future prices. We think they are more liable to go up than down. We have recently doubled the capacity of our dry kilns as we find the nature of our increasing trade demanded it.

Drop in the Cheaper Grades

J. W. Hall, of Edmonton, N.B., says building operations do not look any too bright. There is practically no demand for lumber of any kind, and while there has been considerable of a drop in the cheaper grades of finishing lumber and hardwood floorings, it seems that some of the better grade stock is still away too high. "Our trade in these parts is mostly with the farmers and mill hands. The bottom having dropped completely out of the potato market has put the farmer out of business in that line. Some have been able to cut pulpwood off their farms, but that market does not look any too encouraging. The mills are all down, which puts the mill hand out of employment, our railways are practically on half time, and while I do not like to be too pessimistic regarding building operations for this coming season, I can't see where the money is going to come from. I am endeavoring to carry an assorted stock. I had planned on

N. Cluff & Sons, of Seaforth, Ont.—We do not find the spring building demand very brisk; in fact, have made up our minds that it is likely to be a fairly slow season. The people seem to expect a further drop in prices, and are hesitating to commence building on that account. Our stock is heavier than is usual with us at this time, and it will be our policy to reduce same to a very low point before buying again.

April Sees Revival in Trade

The Ingleby-Taylor Co. of Brantford, Ont., remark.—Business has been very good with us since the first of the present month. Most of the lumber going out at present is rough material which is being used on jobs which are just being started. It is a little early for much trim to be on the move, but there are quite a number of jobs started and we believe there will be many more when the wage scale is adjusted with the carpenters and bricklayers. In regard to the prices of lumber we believe that B. C. products have about reached the bottom, but think that there will be further reductions in the price of Ontario pine. Hemlock has also apparently reached its level in price. Our yard stock is smaller than at this time last year.

The Brockville Lumber Co. of Brockville, Ont., observe.—Regarding the present demand for lumber, there is practically no new work going on here. A few jobs have started but nothing to amount to anything. There is the usual repair work: a number of small jobs but the amount of material used is small. We are carrying at this time about our usual stock. In fact we find we are obliged to carry about the usual quantities all the time. Some of this we bought at last year's price and we will lose money on it; other portions are more recent purchases. We have made no material changes in our plant with the exception that last year we installed a new dry kiln and this year we have put in two machines, a pony planer and a moulder. We are prepared for the business as soon as business develops.

Expect Atmosphere to Clear

Vigars-Shear Lumber Co., of Port Arthur, say.—We find that the demand for lumber and building material at present is very light. This is due to the general re-adjustment taking place throughout the country at the present time. While the lumber yards have reduced their prices on material considerably, the intending builder is waiting for lower prices in labor and further reductions in material including heating, plumbing and hardware. We might state that we expect this situation to be cleared up shortly and hope that building operations will then commence, as there is no doubt but what additional accommodation is required. Stocks on hand at the head of the lakes are very low for this season of the year, but should any demand develop, the necessary material would be forthcoming without a doubt.

Large Stocks Are Held in Ottawa

E. M. Barrett, of Barrett Bros., Ottawa, who is president of the Ontario Retail Lumber Dealers' Association, says:—Building operations are not very brisk in Ottawa. There are a few small jobs starting, but nothing like the number we have had in previous years. Repair work is also very slow. The majority of the people seem to be waiting until after May 1st to see if there is going to be any reduction in the price of labor. Regarding lumber prices, there has been considerable reduction. It is impossible to tell what the values in the future will be. Much will depend upon the amount of business that develops. If business continues quiet it is reasonable to suppose that the manufacturers in many instances will start to reduce their prices, and, of course, if they do the distributors will fall in line. The majority of the Ottawa dealers have a large stock of material on hand. We ourselves have very much more lumber now than we had at this time in previous years. So far we have not made any special plans to induce people to consume more lumber other than the reduction of prices. We consider that the lumber trade is governed by a great many outside forces, particularly money conditions, and it is nearly impossible to increase the consumption of wood products unless those conditions are normal.

Clinton Bros. of Thessalon say that business with them is about as usual and that very little building is going on on account of the high price of all materials. Birch, spruce, norway pine and hemlock are cheaper but white pine, which they use principally, still holds high and is not likely, the firm add, to go lower. Wages are the same as last year but are likely to drop. Clinton Bros. add that it will not be possible to reduce prices on some on their lines until wages and other expenses come down.

Larges forests of pines are to be found in the mountains in the interior of Haiti, but lack of transportation makes it impossible to utilize this timber even for domestic needs. Large quantities of pine are imported from the United States. A few small sawmills are located in various sections of the island, but these can not begin to supply the local markets. Dyewoods are plentiful.

Mr. Sargant Takes Up His New Duties

R. L. Sargant, Ottawa
New traffic manager for C. L. A.

R. L. Sargant, who has entered upon his new duties as traffic manager for the Canadian Lumbermen's Association with headquarters in the Fraser Building, Ottawa, is getting acquainted with the details of the work and expects soon to become thoroughly familiar with the department which has just been inaugurated by the association.

As stated in the last issue of the "Canada Lumberman," Mr. Sargant has had an extended experience in railway traffic and tariff work, which well qualifies him for his new position. He was junior clerk, stenographer, tariff and tracing clerk in the G. T. R. Division Freight Office, Toronto, from January, 1899, to February, 1904. During the next five years he was waybill checker and statistical clerk, and after that rate clerk. In March, 1909, he was appointed chief clerk of the Division Freight Office at Stratford, where he remained a couple of years. He next became Soliciting Freight Agent for the Division Freight Office, Toronto, and in November, 1912, was appointed chief clerk for the Division Freight Office, Montreal, where he remained four years. He then was in the General Freight Department, and in August, 1916, was offered the important post of traffic manager for Canadian Explosives, Limited, and Dominion Cartage Co., Limited, Montreal, and in order to accept the same, resigned from the Grand Trunk service in which he had spent seventeen years. In October, 1919, Mr. Sargant was appointed director of traffic of Canadian Explosives, Limited, and subsidiary companies,—Dominion Cartage Co., Limited; Canadian Fabrikoid, Limited; Arlington Co. of Canada, Limited; Flint Varnish & Color Works of Canada, Limited, and Copper Products, Limited.

Canadian Wood Cocks Were Not in Season

J. L. Englehart, for many years chairman of the Temiskaming & Northern Ontario Railway Commission, and a former resident of Petrolia, Ont., passed away recently in Toronto.

Mr. Englehart was widely known throughout the north and discharged his public duties as chairman of the T. & N. O. Board with a faithfulness and industry that marked a very rare degree of public service. He was well known to the lumbermen and pulpwood operators all along the line from Cochrane to North Bay.

When a young man Mr. Englehart was a confirmed practical joker. One day in the old Tecumseh House in London, Ont., he saw a couple of wooden spigots in the office. A few minutes later, on the street, he met the president of the local game protection association, to whom he confided his suspicion that the proprietor of the hotel was breaking the game laws, as he had just seen a couple of "Canadian wood cocks" at the hotel.

The overzealous president, without verifying the information, proceeded to lay a charge against the hotelkeeper and summoned Mr. Englehart as a witness. Crown Attorney Taylor was rather dubious about the case, knowing Mr. Englehart's predilection for jokes, but placed him in the box. The witness had taken the precaution to provide himself with the exhibits in the case, and when asked to tell his story, he repeated his story as to what he had seen at the hotel, and in confirmation he produced the spigots and laid them on the magistrate's desk. The irate crown attorney accused him of trifling with the dignity of the court and pressed for a commitment for contempt, but Magistrate Lawrason, who loved a joke himself, looked at the spigots and overruled the motion.

"Then I ask your worship to assess the costs of the case on Mr. Englehart," insisted Mr. Taylor, but the magistrate laughing, replied: "I'm afraid you'll have to pay the costs yourself."

Canadian Sawmill Machinery in India

H. R. Poussette, Director Commercial Intelligence Service, writing to the Department of Trade and Commerce, Ottawa, on "India and the Middle East as a Market for Machinery and Parts and Mill Stores," has the following to say respecting sawmill and wood-working equipment:

There is a considerable business done in saw-milling machinery both for large and small plants. Considering the amount of this class of machinery which is produced in Canada, it should be possible to secure some of the orders which are going from India. In Rangoon it was stated that large timber firms preferred to do their own importing of machinery, consequently the most simple way to deal with them would be to get into touch with their London offices. One large firm in that port stated that they had a representative over in California studying the saw-milling methods in that state. An importer in Burma was of the opinion that it would pay Canadian manufacturers to open their own offices in India, but whether this advice was sound it is difficult at the moment to say. But certainly, in view of the immense forest resources not only of India, including Burma, but also of Ceylon, Malaya, and the Netherlands East Indies, a Canadian firm would be fully justified in giving the closest attention to the suggestion. If it might not pay one firm, it might pay a group of manufacturers of saw-milling and wood-working machinery, saws, etc., to combine and open an office in India, to take care of the whole business of the Middle East. In any case it may be stated that the imports of this class of goods are considerable, and it is practically certain that they will continue to increase.

At the present time the machines in use are not nearly so up-to-date or so efficient as those employed in the big lumber mills in the Dominion. Installation at the moment of modern machinery might not pay on account of the unadaptability of the labor employed. It is more than likely, however, that it will gradually come into use.

It is extraordinary to observe the amount of timber which is cut in India by means of the old-fashioned saw-pit and the old-fashioned saw. But labor is cheap, and although the Indian does not work very fast, it must be remembered that he is only paid 6 or 7 annas a day for this class of work. A great amount of the saw-milling machinery is imported from the United Kingdom, and probably most of the saws in use in India were purchased in that country. Circular saws vary in size from 2 feet up to 7 feet.

According to importers there is a steady demand for wood-working machinery from new parts up to complete outfits. Inquiries, it is stated, are being constantly received for panel planers, thicknessing machines, planing machines, small band saws, planing knives, hand-power mortising machines, single and double spindle moulders, combination hand and foot power machines, and saw benches, etc.

Encouragement for Those Waiting to Build

The latest issue of the Canadian Building Review, issued by McLean Building Reports, Ltd., states: Large employers of labor report that an increase in the efficiency of labor has resulted in a considerable reduction in building costs, and that as a result contractors are able to put in lower bids on construction work. The significance of this statement is realized when one considers that the proportion of direct labor in the total cost of a building varies from 40 per cent. to 50 per cent. and in the case of materials the labor charge is from 65 per cent. to 85 per cent. of the total manufacturing cost.

The cost of 48 building materials has declined 16.6 per cent. from the high mark of last May. In a number of instances materials have receded to the basis of replacement costs and have even gone below that point. This factor, combined with great efficiency on the part of labor, may lead to greater activity during the building season than was anticipated. A very considerable part of the advance in the cost of building has been due to the mistaken idea of some branches of organized labor that the less work each individual workman does the more there will be to go around and the less unemployment there will be.

During the war years there was a marked decline of output per man in the building trades. The increase now reported will encourage people once more to invest money, not only in dwellings but in business structures and public buildings.

After an exhaustive investigation of the building situation we forecast a gradual resumption of building activity by spring. This will mean gradually, month after month, until by late summer it may reach substantial levels.

Will Organize Empire Forestry Service

A conference of British and Dominions representatives has been held in London, Eng., for the purpose of considering a proposal to establish voluntary forestry associations throughout the Empire. Lord Lovat supported the proposal.

The formation of associations was commended by the Imperial Forestry Conference held in London last year, in the belief that the voluntary movement would be greatly helpful to the efforts of the official bodies which had been already brought into existence. It had been calculated that the Empire possessed about twelve hundred million acres of forest lands, but only one-third were economically productive, and unless the various Governments of the Empire bestirred themselves in the matter of timber conservation and reforestation we should be face to face in the near future not only with a timber shortage, but also with famine prices.

Wholesalers Discuss the Grading of Hemlock

Want Product Put Up as No. 1 and No. 2—"Merchantable" is Term of Too Wide Interpretation—Trade Outlook Reviewed by Coast Mill Representative

The question of grading hemlock as "No. 1" and "No. 2" instead of "merchantable," was discussed at the regular monthly meeting of the Wholesale Lumber Dealers' Association held on April 15th at the Albany Club, Toronto. The matter was brought up by Alex. C. Gordon, chairman of the Inspection Committee of the Association. He said that those handling hemlock for the past few seasons knew that the mills, under the present system, have been putting up a grade known as "merchantable." This term had no significance whatever and was too broad in its interpretation. If one asked for a definition he would be told by one man that merchantable was log run with the dead culls out. Another would say it was No. 1 with the upper grades of No. 2 included. Still another would declare that merchantable was No. 1 carrying 15 per cent. of No. 2. Some asserted that the term meant No. 1 with 20% of No. 2, and a few even went so far as to add 25%, 30% and even 40% of No. 2. This was not definite enough for the customer who had a right to know what he was getting under the term "merchantable."

"We have," added Mr. Gordon, "many customers throughout the country who never handle anything but No. 1 grade of hemlock and are not in the market for a lower grade, and we have other customers who handle No. 2 exclusively. We cannot satisfy either of them under the present system of "merchantable." Now if a kick arises it cannot be definitely settled owing to the absence of any well-defined grading rules in hemlock. I have always noticed that if a dispute crops up owing to the indefinite interpretation of the term "merchantable," you have to give the customer all that is coming to him and frequently a great deal more before he is satisfied. I would like to see this matter discussed and the suggestion offered that the mills return to the old system of grading hemlock known as "No. 1" and "No. 2." It is time that action should be taken on this question if we are going to do anything, as the mills will soon start sawing for the season."

J. P. Johnson said during the past year owing to the excessive demand for hemlock, any grade would sell readily. He thought, however, that the wholesalers in the future might refuse to buy hemlock unless it was put up in No. 1 and No. 2 grades.

A. E. Gordon said that merchantable hemlock differed widely in its meaning when 15% up to 50% of No. 2 was included. He did not see how they could influence the mills as an association unless individually they took up the question of grading with the manufacturers, which was the course that he favored. As an association they would be limited anyway to those who were members of their own body.

A. E. Eckardt, chairman, referred to the carelessness exhibited in the manufacture of hemlock. By trimming a board it could often be converted into No. 1 grade. The question of grading should, in his opinion, be left to the members to take up individually with the manufacturers.

Speaking again on the question, A. E. Gordon said that they should by all means write as individuals to the mills, and do it without delay, making the suggestion that hemlock should be put up as No. 1 and No. 2 grades. He believed that the question had been brought up to ascertain the feeling of the members. Mr. Gordon thought it was the opinion of all that hemlock should be graded and handled as "No. 1" and "No. 2" instead of "merchantable."

No further action was taken on the matter and it was understood the suggestion will be followed by the wholesalers writing to the mills from whom they buy, requesting taht hemlock be put up sized and graded as "No. 1" and "No. 2" rather than as "merchantable."

Activity in Traffic Matters

Referring to the recent reduction in freight rates from the Coast to Ontario and the east, D. C. Johnston thought that something should be done to secure a similar decrease in Ontario, particularly on all points south of Scotia Junction.

A. E. Clark referred to the appointment of R. L. Sargant of Montreal as traffic manager for the Canadian Lumbermen's Association, and believed that they had secured a capable and aggressive official. The new traffic department would attack any excessive charges in Ontario and the lower provinces and would also seek to straighten out inaccuracies in classification and special rates. One of the first things taken up would be an effort to have restored the amount of 500 lbs. for variation in the tare of a car owing to the accumulation of debris. This allowance had been absolutely wiped out by the railways some time ago and it was most important that it should be put into effect again as soon as possible. He hoped that the new traffic department and transportation officer of the Canadian Lumbermen's Association would receive the support of every member of the Wholesale Lumber Dealers' Association.

During the evening short addresses were delivered by Ed. Killilee of Montreal, representing the W. M. Ritter Lumber Co,; A. B. Davis of the Ross-Saskatoon Lumber Co., Waldo, B.C., and L. R. Wright, editor of the "Canadian Woodworker," Toronto.

The Outlook for B.C. Woods

K. M. Brown, Toronto, eastern representative of the Vancouver Lumber Co., gave an interesting and comprehensive address on the market outlook for B.C. forest products. During the past few months lumber manufacturing in the Pacific Coast province had been greatly curtailed and stocks have increased slightly. Touching first on the shingle situation, Mr. Brown said that the American market offered good business in five X shingles and he did not look for any reduction in present prices if production did not start up again in too large a volume. Mr. Brown reviewed various markets and spoke of the stiff competition which B.C. forest products had met with in the east where, since the high freight rates had become effective, southern pine had knocked out B.C. fir to a considerable extent. He quoted banking and other statistics so far as the American building and allied programmes were concerned and stated that, across the border, it was estimated the general drop in lumber prices since May 1920 had been about fifty per cent.

There were five important factors which entered into the general building situation. One of these was cheap lumber and so far as Coast products were concerned, he asserted that prices were down about forty per cent., taking into consideration commons and the upper ends. Cheap steel was another factor and still another was cheap and efficient labor. When labor was efficient the cost of production was greatly reduced. Cheaper brick was also desirable and easier money conditions. In the U.S. financial market the reserve funds were increasing. Mr. Brown pointed out that the national banks only could issue currency in America and not the state banks with which the majority of retail yards had to deal. The latter had sent Liberty bonds to New York to raise money and, on them seventy-five per cent. was advanced as loans. Twenty per cent. of this sum had to be kept on deposit, so that state banks could only advance for loaning purposes fifty-five per cent. of the face value of Liberty bonds, which tied them up considerably. Legislation was being introduced to improve this state of affairs. Call money on Wall street was now six per cent. Considerable more liquidation was necessary before arriving at an easy state so far as financing was concerned. When the bond market was less attractive there would be more money available for first mortgages. Bonds had been selling at very low prices, making the rate of interest so inviting that a great deal of capital had gone in this direction. From this out an improvement was looked for.

So far as American conditions generally were concerned, Mr. Brown stated that feeling went higher there in times of prosperity than it did in Canada and consequently, when depression set in, the fall was harder than on this side of the line. Touching upon the business from the prairies, Mr. Brown stated very little was offering this season and could not be expected until the crop situation was determined. The western cities were better off than the country and their purchases were helping to hold up the volume of trade done in the west. Several cities were offering better business than last year. The prairie market itself was always a fall market and nothing much would be done with farmers until they felt that a good crop was assured. Many farmers lost money on last year's crop and probably a start would result in rural building by the fall.

Reverting to Ontario and the east, the speaker added this market had been held up by the high freight rates and tight money. The industry was looking for some improvement owing to the recent decrease in carrying charges on carlots of lumber from the west and in the easing up of the financial situation. The reduction in freight rates would average from one dollar per M on cedar bevel siding up to four dollars and a half on rough timbers.

Mr. Brown took occasion to speak on both manufacturer and cus-

tomer honoring all contracts in good as well as dull times and said that confidence was gradually reasserting itself. The trade was beginning to adopt a different mental attitude with regard to the future than it had been. So far as building reports in Canada were concerned, the returns for the first three months of 1921 showed a considerable falling off in industrial building which last year was very heavy owing to industrial expansion but, in the line of house erection and engineering work, there was an improvement over last year and active programmes were under way. This should materially help out matters. He was of the opinion that building would be much better during the fall months than at any period during the summer. Some of the retail lumber dealers who were content to take a loss were doing a splendid business right now in moving stock. Lumber was now the biggest cheap commodity and should be advertised as such. The future depended much on the course of the retail yards on whom the manufacturer had to look for the disposal of the bulk of his stock.

In concluding, Mr. Brown thought that the worst had been passed and from this out there should be an improvement. There had been some hard sledding in the lumber business during the past few months but previous to that there had been some mighty good sledding. The future was bound up in many big problems and confidence was necessary but, on the whole, the outlook was fairly good and all things considered the lumbermen should not be skeptical in looking forward to the months to come.

Lumber Conditions in the South Reviving

W. H. Harris, president of the Frank H. Harris Lumber Co., Toronto, and of the Harris-Brooks Lumber Co., Meridian, Miss., returned home recently after a three months' business and pleasure sojourn in the Sunny South. Mr. and Mrs. Harris spent several weeks at the "Pine Forest Inn," Summerville, South Carolina, where a large number of Torontonians were enjoying a winter holiday.

Speaking of lumber conditions in the south, Mr. Harris stated that the production at present is only about 60 per cent. of normal and that a large number of the smaller mills are not operating at all. The result has been that stocks with the bigger concerns are pretty well shot to pieces, particularly when any special sizes are desired. The weather during the past few weeks has been favorable for logging and labor conditions have settled down considerably. Negro help that a year ago commanded $3.00 a day, can now be engaged for half that sum and the colored workers are pleased to get employment. A number of firms in the south have been taking a considerable loss on their operations, particularly those mills which went into cutting hardwoods during the feverish demand of last spring.

Mr. Harris is of the opinion that prices have about touched bottom. The demand of late for southern pine has been spasmodic, but is slowly reviving. The planing mill of the Harris-Brooks Lumber Co. is running but the sawmills at High Point and Lake, Miss., have not started up and may not resume until conditions become more settled.

British Columbia Forestry Club Revived

The British Columbia Forestry Club was reorganized at a dinner held in Vancouver, when over sixty were present. This club was in existence prior to the war but, with so many of its members going overseas, interest lapsed. At the reorganization meeting, much interest was shown and it is expected that the club will do excellent work, more especially along forestry lines. Aird Flavelle, of the Thurston-Flavelle Lumber Co., Port Moody, gave a resume of conditions in Ontario, from which province he recently returned. Other speakers included Fred H. Lamar, secretary of the Shingle Manufacturers' Association; H. H. Ross, of the Ross-Saskatoon Lumber Co., of Waldo, East Kootenay; Maj. McLaurin, station superintendent of the Jericho air board station, who has been flying over forests for the Government; Prof. Christie, formerly with the provincial department and now of the staff of the University of British Columbia; and William Turnbull, provincial lumber commissioner. Messrs. A. Flavelle, H. R. MacMillan, of the H. R. MacMillan Export Co., and W. B. W. Armstrong, secretary British Columbia Loggers' Association, were appointed a committee to act in the interests of the organization, to report at the next meeting. M. A. Grainger, managing director Timber Industries Council of British Columbia, has been active in the matter of reorganization.

Home Building Show Held in Winnipeg

The exposition of building materials and products held in the Board of Trade Building, Winnipeg, during the week ending April 2nd, drew increasing crowds throughout the whole period. There were many good exhibits which attracted an unusual amount of attention as did also the motion picture show dealing with building problems, and the interesting lectures on the different phases of home building and the advantages of home owning to the individual citizen and to the general prosperity of the nation so ably explained by W. J. Wilson, of the Western Steel Products, Ltd. House painting, by John Drew of the Winnipeg Paint & Glass Co.; spray painting, by Samuel Dobbin, of the Roofcraft Co.; sanitary sewerage for suburuban homes, by L. A. Wilson, manager of the Anthes Foundry; construction of buildings in relation to efficient heating, C. D. Kirk, of Charles D. Kirk & Co., and home furnishing and decorating by Prof. A. A. Stoughton, were all well-timed, interesting, educational addresses and attracted overflowing audiences.

In addition to these attractions a bungalow was erected at the rear of the exposition building with materials contributed by various exhibitors. This bungalow was offered as a prize to the owners of the programme numbers the same as the winning ticket.

Ottawa Lumbermen's Credit Bureau Annual

The annual meeting of the Ottawa Lumbermens' Credit Bureau was held at the Laurentian Club, Ottawa, on April 12. Satisfactory reports on the past year's work were presented and there was a representative attendance.

H. A. L. Swan, secretary-treasuurer of the Bureau, presented the annual statement showing in detail the work accomplished during 1920.

The reports of the Committees were received and adopted as follows:

Membership, Local Mill Work and Builders Supplies; A. M. Davis, Chairman.

Co-operative Buying; E. M. Barrett, Chairman.

By-laws; C. R. Robertson, Chairman.

Mr. Robertson of the Gatineau Company Limited, Chairman of the Weekly Committee said that while the work was fully covered by the secretary's report he felt that he might consistently add that

G. P. Davidson, President of Ottawa Lumbermen's Credit Bureau

H. A. L. Swan, Secy.-Treas. of Ottawa Lumbermen's Credit Bureau

the Bureau was a great influence in keeping the firms mutually posted on credit and trade matters.

Mr. Barrett, of Barrett Brothers, in expressing a similar sentiment, declared that the Bureau had undoubtedly proved a great medium of buoyancy in times like the present when business was dull, making it possible to meet regularly co-laborers and discuss matters in a beneficial way.

Mr. Davis of the McAuliffe-Davis Lumber Company and Taft-Davis Lumber Company spoke in a similar tone.

Samuel C. Thompson of the Gatineau Company, Limited, congratulated the Committee and the Secretary on the report of their efforts and predicted a business revival the volume of which few expected.

The following officers were elected:

Honorary President, Hon. W. C. Edwards; Honorary Vice-president, W. H. McAuliffe; President, Grant P. Davidson; Vice-president, Geo. T. Barrett.

Board of Directors: Samuel C. Thompson, The Gatineau Company, Limited; A. M. Davis, McAuliffe-Davis Lumber Co.; J. C. Pratt, Geo. M. Mason Limited; M. C. Neate, M. C. Neate Lumber Company; M. N. Cummings, M. N. Cummings, Westboro; W. F. Wilson, Ottawa South Planing Mill.

Secretary-treasurer: H. A. L. Swan.

Those present were: G. P. Davidson, (president); A. M. Davis; S. C. Thompson; E. M. Barrett; J. C. Pratt; M. N. Cuummings; W. F. Wilson; J. S. Binks; C. R. Robertson; A. G. Rose; M. E. Davis; W. Megloughlin; R. Tubman and H. A. L. Swan, (sec.-treas).

How Life of Motor Truck May Be Extended

There Are Many Ways to Care for and Increase Its Efficiency—Main Object is to Keep Truck Free from Mechanical Ills and Long Tie-Ups

If every retail lumber dealer knew that it was possible to extend the life of his motor truck 100 per cent merely by attention to a few small and apparently useless repair jobs and having inspections and overhauling at the proper times, he undoubtedly would immediately see the economy of a good repair shop. Some do give heed to these things, but others do not. In fact, the latter greatly outnumber the progressives. We have met both parties, and as a result of direct contract we know whereof we speak, writes H. R. Totten.

There are any number of methods that might be used to care for and at the same time increase the efficiency of a truck, but the main object is to keep the truck always free from mechanical ills that are likely to cause trouble on the road or long tie-ups in the shop. In the main, there is no fixed rule that may be used as regards truck repair, when it comes to a general application of principles. Conditions of operation vary too much for this. However, every motor truck operator should see to it that no vehicle is allowed to run for more than twenty-four hours with a loose part, a part likely to break or a part needing adjustment. This means that a daily inspection should be made, and the driver should be consulted daily as to any irregularities of running.

In this way any trouble is caught immediately and before there is time for it to develop into something more serious. Inspection on the garage floor, with the engine idling, is not enough. That is why the driver should be consulted. A knock may have developed in the engine, in a universal joint or in the rear axle or countershaft. While it is quite possible that the knock would cause no interference with truck operation the next day, the chances are ten to one that if it is allowed to continue for long the knock will develop into a broken gear, connecting rod or what not. Immediate attention to smaller matters, to symptoms of impending trouble, will save a great deal of money in actual repair cost and add to the length of truck service.

But some motor truck owners seem to be possessed with the belief that it is needless waste of time to do anything until something happens that puts the truck out of commission. Their motto is: "Let it run until it needs repairs and then do all the work at once!" They never stop to figure out the loss bound to result from the truck being out of service for a long period. Likewise, they fail to consider the cumulative effect of troubles that seem unimportant in the early stages.

Properly cared for, very day, or perhaps every week, in addition to doing the necessary smaller repairs immediately, a truck will probably not require any such thing as a complete overhauling at the usual intervals.

Many lumber firms find that the most efficient method to pursue in the matter of inspection and repair is the unit system. This is a very satisfactory method of working. On Monday, for example, all axles are gone over; on Tuesday, the clutches; on Wednesday, the ignition, carburetion, motor supports, etc.; on Friday, lubrication and tightening; and so on through the week. This is a satisfactory procedure, provided that, in addition, any trouble reported by the driver or the tester is given immediate attention, whether it is on the schedule or not. On can not tell when certain troubles will come up, and it will mean a loss of time and money to allow a repair or adjustment to wait its turn.

Even the owner of one truck will be saving if he will either learn how to keep his truck always in the pink of condition or get someone who knows how. Dependence on a public garage or a service station is satisfactory only in one respect. It is a place where work may be done. But these stations and garages are not able to fix up a truck and get it back to the owner in quick time. This brings out the importance of having the driver learn all about the truck he drives. If the man could be taught to make minor repairs and adjustments, the owner of a single truck would be saving money in the end, even though the driver is paid extra for the work. There is no necessity for the owner of four or five trucks depending on an outside repair shop.

The progressive lumber dealer will supply each driver with a card, which, when filled in at the end of the day, constitutes a report on the operation of the truck. This card should list all important parts of the truck, such as ignition system, carburetor, brakes, clutch, governor, driving chains, axles, tires, etc., whether unusual knocks or noise developed, how the steering worked, and whether the brakes hold securely. A report of this kind for each truck should be gone over carefully by the owner, or by the man in charge of the trucks, and if any adjustment, replacement or repair is necessary, it should be done at once. The longer the delay the more it will cost in the end.

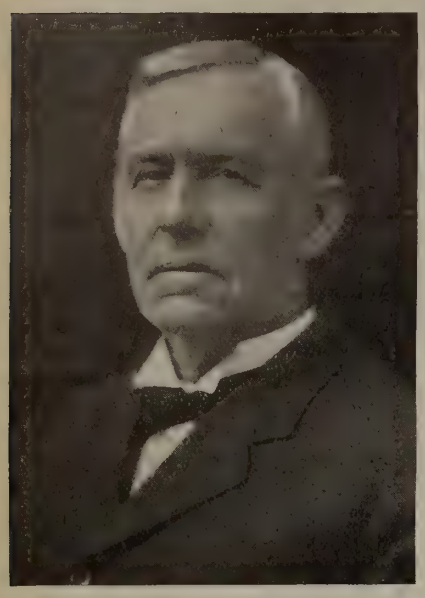
There is no law governing the periods of truck overhauling. It is quite possible to keep a truck running for two years without laying it up for a complete overhauling. Attention to lubrication and minor repairs as soon as needed may keep a truck running for a long period, without more than a day's lay-up. Since trucks are operated under such dissimilar conditions it is necessary for the owner to consider the importance of eliminating delays and do everything possible to live up to the law of immediate repair.

A good investment is that of tool equipment and shop facilities for working on trucks. Thus is but natural, because the proper tools and proper equipment mean quick work with the least discomfort to the workmen.

It cannot be said that a truck should be overhauled in so many miles or in so many months. Each truck is operated under its own individual conditions; the driver is different and the loads differ. To keep after the truck's mechanism constantly is the best way, and in doing this advantage is taken of nights, by many lumber firms, when the truck is not in operation, or periods when business is light, to give the vehicle such overhauling as it needs.

Tractor used by St. Maurice Paper Co. of Montreal, in hauling logs at the company's operation at St. Donat, Que. The tractor pulled three sleigh trailers and moved 180 logs on each trip over a governing grade of 18%, making four round trips each day. The company are well pleased with the operations of the tractor.

John Piggott Passes Away in Windsor



The late John Piggott, Windsor, Ont.

John Piggott, one of the veteran retail lumbermen of Ontario, passed away on Friday, April 22nd, at his residence, 549 Ouellette Ave., Windsor, aged 78 years. He had been ailing for some time and his death was not unexpected. Just two years ago this month he retired from the firm of John Piggott & Sons of Chatham and Windsor, after 50 years' active identification with the industry. His sons, Percy G. Piggott and Walter T. Piggott, bought out their father's interests, the former taking possession of the Chatham business under the name of the P. G. Piggott Lumber Co., and Walter T. assuming the Windsor end under the title of the W. T. Piggott Lumber Co.

Mr. Piggott was well and worthily known throughout Western Ontario. He was born in Oxfordshire, England, and came to Canada with his parents when he was five years old, locating in Woodstock, Ont., where his father was a well-known contractor. When John Piggott worked with him in the early days, his principal occupation was matching flooring by hand, which is quite different from to-day's operation.

The late Mr. Piggott took an active part in military affairs away back in the days before Confederation and was instrumental in organizing the Woodstock Fusiliers.

After leaving Woodstock ,the Piggott family settled on a farm near Thedford in Lambton County, where they hewed out the timber by hand and erected a log hut. By hard, strenuous work they cleared a farm and at odd periods took some jobs in the contracting line. In 1869 John Piggott removed to Chatham and started in the lumber business in a small way. The staff consisted of a teamster, a helper and himself in the office. Some 27 years ago Mr. Piggott extended his connection in the trade to Windsor, buying out the entire interests of W. G. Nutson. Steady growth marked the Chatham and Windsor branches, and large and busy woodworking factories are operated in both these cities.

The funeral of the late Mr. Piggott took place in Chatham on Monday, April 25th, and was attended by a large number of friends in the lumber industry and other callings. Service was conducted in the Park Street Methodist Church and interment took place at Maple Leaf Cemetery.

John Nicholson Crosses the Border

Many friends in the lumber industry will regret to learn of the death of John Nicholson, who passed away on April 20 at his home in Hamilton, Ont., aged sixty-nine. For many years he was actively identified with the widely-known woodworking and lumber business in Burlington which bears his name and built up a large connection. The remains were interred in Grace Church cemetery, Waterdown, Ontario.

Mr. Nicholson was born on the old Nicholson homestead, in East Flamboro township, in 1852, and resided there continuously until 1906, when he moved to the village of Waterdown, and lived retired for some time. After a few years Mr. Nicholson again entered business life and became associated with his son in the Nicholson Lumber Company, Burlington, in which business he was actively engaged until his death. He took an active part in municipal affairs, and served in the East Flamboro township council and the county council almost continuously for 17 years. He contested the North Wentworth riding in the provincial election in 1894, but was defeated by a very small majority.

Mr. Nicholson enjoyed the best of health until about six weeks ago, when he contracted typhoid fever, which resulted in his death. He is survived by his widow, four daughters and one son, Allan S. Nicholson, managing director of Terry & Gordon, Limited, Toronto.

Passing of Another Veteran Lumberman

Many friends in the lumber trade will regret to learn of the death of James McBuruney of North Bay, who died at the Toronto General Hospital on April 16th. Mr. McBurney was struck by a street car a few days before his death and pneumonia developed, following the accident. He had been spending the winter in Toronto with his daughter, Mrs. W. R. Walton, 10 South Drive.

Mr. McBurney lived for several years in Simcoe and about twenty-one years ago went to North Bay and erected a mill at Callendar, nine miles southeast of that town, which plant is now owned and operated by A. B. Gordon & Co. Mr. McBurney conducted this mill for a number of years and was widely known in the north where he was highly respected. In August last on the occasion of the outing of the Ontario Retail Lumber Dealers' Association to the North Bay district when the members inspected the Callendar mill, Mr. McBurney was on hand and was greeted by numerous friends.

Previous to removing to North Bay, Mr. McBurney had extensive business interests in Simcoe, where the remains were taken for interment. He leaves two sons, John in Saskatchewan and Dr. William in Michigan, and two daughters, Mrs. Walton and Miss McBurney.

In the passing of Mr. McBurney another veteran figure in the lumber arena has gone to his reward.

Building Active But Rents Still High

During the past few weeks building operations have been carried on quite extensively in Toronto. On one day recently City Architect Price issued building permits for dwelling houses aggregating $191,000 in value. This constitutes a record for house-building and is regarded as encouraging.

The usual number of removals from one habitation to another took place in Toronto, Ottawa, Montreal, Hamilton and other Canadian cities on May 1st. The period of depression has, apparently, not made the prospects of the lessees any brighter so far as obtaining new quarters at reduced rental is concerned. There is still a great demand for houses of all kinds in the larger places. Stiff prices are being asked for those residences which are to let. No evidence exists that the drop in the value of building materials is reflected in rentals, although it may have some effect on sale prices.

A comparison of rental values in Toronto this year with last year in different sized houses and apartments gives some idea of the trend of things.

House Rentals

Size.	This year.	Last year.
6-roomed	$ 50 to $ 65	$45 to $ 60
7-roomed	60 to 70	50 to 60
8-roomed	70 to 125	60 to 100
10-roomed	100 to 150	80 to 125
Apartments (High-class)		
Size.	This year.	Last year.
4-roomed	$ 55 to $ 75	$50 to $ 65
5-roomed	65 to 85	60 to 75
6-roomed	100 to 140	90 to 100
Apartments (Medium-class)		
Size.	This year.	Last year.
2-roomed	$ 20 to $ 25	$15 to $ 20
3-roomed	35 to 50	25 to 40
4-roomed	45 to 65	35 to 50
5-roomed	60 to 75	50 to 65
6-roomed	80 to 100	70 to 80
7-roomed	110 to 120	90 to 100

Arnprior Sawmills Will Double Output

D. McLachlin of Arnprior, president of the Canadian Lumbermen's Association, was a recent visitor to Toronto, and called upon a large number of friends in the trade. Mr. McLachlin stated that their mill would resume operations about May 1st. The men will work 10 hours a day instead of 9 hours, as last year, and a cut of 15% in wages has gone into effect. The company's spring drive of logs has been coming down in fine shape and they have ample supplies for an unusually large cut.

Mr. McLachlin added that the total production of white and red pine at the mill this year would be about 30,000,000 to 35,000,000 feet, whereas last year only 18,000,000 feet was cut. He has faith in the stability of the lumber market and believes that from now on conditions will gradually improve.

Five for Freight—One for Lumber

"A lumber wholesaler of Shreveport, Louisiana, exhibited recently a memorandum of a settlement just received from his customer on six carloads of No. 2 sap gum, rough lumber, which was shipped from a point near Shreveport to a customer in St. Louis, which shows that the freight bill paid on the shipment amounted to nearly five times as much as the millman received for his lumber. The total amount of freight paid was $947.03, while the lumberman received a check for $195 for the entire amount of lumber shipped in these six cars.

"This was low-grade lumber of the kind that is usually sold to box factories for the manufacturing of box shooks, which is about the only purpose for which No. 2 and No. 3 common gum is being used.

What One Lumber Association Has Achieved

It Has Done Much for the Industry Itself and the Public—Service, Co-operation and Confidence Identified with Commerce and Prosperity

At the sixth annual meeting of the Southern Pine Association held recently in New Orleans, A. L. Clark of Dallas, Texas, was re-elected president for the coming year. Mr. Clark is well known to lumbermen in Canada and particularly in the west, being president of the Vancouver Lumber Co. of Vancouver.

One of the interesting features of the convention was an address by J. E. Rhodes, secretary and manager of the Southern Pine Association, on "What the Association Has Done for Industry and the Public." He said in part:—Next to the raising of cotton, the production of lumber is the most important business of the southern states. It is by far the most important manufacturing industry, and touches the lives of more people of the South than any other single vocation. In Mississippi and Arkansas 40 per cent. of the population is directly engaged in the lumber business, while in the other southern states a very large proportion of the people are dependent directly and indirectly for their livelihood upon the manufacture of forest products. In the nine states of Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, Missouri, Oklahoma and Texas, there are approximately 14,000 sawmills, with an invested capital of $405,000,000, employing normally nearly a half million people, whose wages represent about $250,000,000 annually. Southern pine constitutes 80.6 per cent. of the total lumber production of the states named, amounting last year to nearly 10,000,000,000 feet, 7,000,000,000 feet of which, or approximately 70 per cent., was shipped outside of the states in which it was produced.

While there has been a decline in the total lumber production, there has been an increase in the number of individual mills producing southern pine. These will still further increase in number as the larger mills cut over their original timber holdings and are succeeded by smaller units, manufacturing the timber which has grown since the virgin forests have been cut. This evolution of the industry is most marked in those states where it has been longest conducted. Every increase in the value of merchantable timber still further insures the establishment of the southern lumber industry as a permanent source of wealth and occupation for the people of the South, as it makes financially possible the protection of young growth and the closer utilization of the forest material.

The Southern Pine Association was conceived for the purpose of rendering a service to all persons engaged in the production and distribution of southern pine, as well as doing what it can legally for the general welfare of the southern pine industry. Since its inception six years ago it has accomplished much not only for the benefit of those who by their subscriptions have made its work possible but a great deal that has been of direct value to the lumber industry of the entire country. Furthermore, it has rendered a distinct and very important service to the public. Because the southern pine industry is so closely identified with the commerce and prosperity of the South, the extent to which the association has been able to serve and aid the industry it has been of equal benefit to the business and financial welfare of the South.

Some Problems Confronting the Industry of Chicago

Dr. Wilson Compton, of Chicago, secretary and manager of the National Lumber Manufacturers' Association, delivered a stirring address on "National Problems Confronting the Lumber Industry," in which he said in part:—

The time has come when business organizations must determine a proper and sound footing and then stand firmly upon it. If trade associations are not in the public interest there must be statutes under which they can be suppressed or their abuses abated.

Those who are antagonistic to trade associations say these organnzations work like the two knives of a pair of shears. One knife consists of combination for the purpose of trade promotion through collective advertising, which should result logically in an increased volume of business. It is expected that this will be the result; for otherwise it would not be undertaken. The other knife consists of combination for the purpose of compiling statistics helpful in conducting business. The critics say this activity is undertaken for the purpose of curtailing the supply of goods. Thus the operation of these two knives of the shears, by increasing the demand and lessening the supply, must result in an unfair and uncompensated increase in price to the consuming public. In other words, the contention is that progress in business along intelligent lines, the collective presentation of pertinent facts to the public and the application of experience and knowledge to the processes of manufacturing and marketing, is an impairment of the public interest. If this is true, then all association advocates have been mistaken. But there is not a single fact to indicate that these things are true.

Dr. Compton then made a review of lumber prices. He insisted that the 1914 prices make no sound basis of judgment and stated that they are taken by the average statistician merely for accidental reasons. There is no more reason, and probably less, for taking 1914 prices than for taking 1907 prices. Had normal increases continued current prices would be perhaps 15 per cent. above present levels, supposing that the upheaval of the war had not occurred. And yet the association and certain individual members are being sued because by the governmental method of computation prices are considered too high. Dr. Compton offered to take the same set of facts and to prove by them that lumber is too low; and he then expressed some confidence that he could find some sort of statute under which the association could be sued because the prices were too low.

Low Price Level Not Permanent

Continuing, Dr. Compton made a brief estimate of probable future trends of business conditions. There is little reason to believe that the low levels reached by the deflation process will be permanent, or that on the other hand there will soon be another runaway market. Foreign countries will doubtless draw gold supplies gradually for the purpose of stabilizing their own finance, and this will reduce the gold reserve supply of the United States, thus tending to keep down the general price level in this country. The cycle of business revival begins with a declining of interest rates and is followed after some months by a revival of stock market activities. Interest rates have been declining for eight or ten months, but as yet the stock markets show little sign of renewed activity. It is probable that 1921 will be a year of low prices.

Who was re-elected President of Southern Pine Association.

Dr. Wilson Compton, Chicago
Who spoke on national problems confronting lumber industry.

Development of Plan Service

"The architect and the small builder," was the subject of a timely address made by Edwin H. Brown, of Minneapolis. He described the new small house plan service got out jointly by the Southern Pine Association and the Small House Service Bureau of Minnesota. Mr. Brown referred to the new handbook recently published by the Southern Pine Association entitled "How to Plan, Finance and Build Your Home," which is for the use of real estate development companies, retail lumber dealers, banks and building and loan associations and individuals interested in home building. It was prepared for the association by the Architects' Small House Service Bureau of Minnesota (Inc.), headquarters at Minneapolis, which is composed of a group of practising architects who have been working for more than a year in developing a plan service that would give the small home builder professionally designed plans of the highest character and quality at

a price that he would be able to pay, this being accomplished by the sale of plans on a quantity basis, the cost of preparing each plan being divided among a number of purchasers in different parts of the country.

The Architects' Small House Service Bureau of Minnesota (Inc.), is the first of the regional bureaus to be established under a plan presented to the convention of the American Institute of Architects at Washington, D.C., in May, 1920. This plan was to make the professional skill and trained ability of architects available for the small house builder and thus stop the erection of small houses in a more or less hit or miss fashion. The Minneapolis bureau maintains a drafting room at Minneapolis where any changes in the plans may be made.

The handbook contains 101 plans for houses designed to meet conditions in various parts of the United States and many of them can be built at the present time for less than $5,000. It also contains reading matter on how to finance the building of a home, selecting the site, estimating costs, and gives valuable information on plumbing, heating systems, painting inside and out, furnishings, etc.

It was stated that this book on "How to Plan, Finance and Build Your Home" had been declared by competent authorities to be the most instructive and helpful volume on homes and home building ever issued.

Where Small House Service Bureau Is

In his talk explaining what the Architects' Small House Service Bureau means to the lumber manufacturer and the retailer, Mr. Brown, who is chairman of the committee on small houses of the American Institute of Architects, summarized under seven heads the service and helps which it is prepared to furnish, as follows:

1. As complete a set of working drawings and details as could be turned out of any architect's office. This had to be done because, in this case, direct consultation between client or contractor and architect is manifestly impossible over the great area of this country.

2. Simple yet thorough specifications that the owner of the home can follow and see that his contractor follows, if he does not try to build the home himself; regular architectural practice.

3. Proper forms of agreement and contract documents that thoroughly protect the owner and the builder of the home; regular architectural practice.

4. A quantity survey for each home. This is something that almost no architect provides in this country. Nor do I know of any other service that provides such a thing for the owner. It enables the owner, or the local lumber dealer, to arrive at costs with ease and accuracy and speed. When this is provided on a larger work it is usually done at a special extra charge, and is considered very valuable.

5. The provision for the utmost economy of construction without the loss of variety and individuality. Each house is figured so that the standards of lumber, millwork, etc., available in any part of the country can be used. Even the short lengths of lumber are made use of. The only way the houses could be designed to be cheap would be to "skin" them to the point of their being "jerry-built," unsame, insanitary, etc. As designed and specified they are economical and safe investments.

6. Immediate service; everything is ready. A call at the Southern Pine offices, or at the bureau offices, will find any of these plans and its accompanying documents in stock ready for immediate delivery. A letter or a wire will bring them by return mail.

7. Every member of the bureau is a practicing architect, a professionally trained man, whose time has been given to seeing that these plans attain a certain high standard definitely agreed on by them all as necessary.

The final speech was on "Economic and Social Conditions," by Rev. George S. Sexton, of Shreveport. He began by paying high tribute to the record of service the association rendered humanity during the war. His address, which was very eloquent, dealt with reconstruction difficulties and especially with troubles arising from the false doctrines of force that are still being applied in the world even after the German theory of military force has been discredited. He mentioned the importance of education and the fact that propaganda is being spread through colleges that must be met by truth. The profiteer and agitator are two enemies that must be swept away. The association can sell right civic ideas to the public as easily as it can sell lumber, and to do so is its obvious duty.

When a Motor Truck Earns Money

A motor truck is earning only when on the road delivering, not when standing around the factory and yard being loaded. That being the case, it is incumbent upon operators to so plan their deliveries and systematize their loading operations that idle time or unprofitable mileage is reduced to a minimum.

Operators of woodworking plants and lumber yards who are fortunate enough to possess a crane of some sort, can reduce the time required to load the truck to a fraction of a minute by making up the truck load on the ordinary yard wagon or truck, and then use the crane to transfer the material from wagon to motor truck. By following this procedure and planning in advance, all the truck driver has to do is to drive up to the crane and have the material laid on his machine. This is far better and far more economical than having to consume the best part of an hour driving around the yard picking up the different items which go to make up the load.

When a crane is not used, the problem may be solved with a little thought and through the expenditure of a small sum of money. The accompanying illustration shows the loading equipment employed by Geo. Rathbone, Limited, Toronto. A suitable space was selected in one of the lumber sheds and two heavy I beams attached to the rafters above. Two chain blocks, carrying spreaders the width of the truck and equipped with hooks, were hung from the steel beam. Shallow channel iron was taken and bent in the shape of a U, the same width as the truck. Holes were bored in these forms

How one lumber dealer facilitates the loading of his motor trucks. Note extended shaft carrying sprocket and actuating chain.

to engage the hooks on the spreader attached to the blocks. The frames on a couple of yard wagons were extended to the same width as the truck body and provision made for using stakes. These stakes are so spaced that when the U forms are placed between them on the wagon the lip of the channel iron will engage the sides of the stakes, thus maintaining the forms in an upright position.

In actual practice a couple of forms are placed on a wagon and it is driven to the yard where the load is picked up. If more than one order is being loaded, pieces of string or lath are used to separate the different orders. When the load is complete, it is backed under the chain blocks, the hooks attached to the forms and the load lifted clear of the wagon. When the empty truck comes in, it backs under the load and the material is lowered. The loading operation consumes about thirty seconds. The trip is planned before the load is built so that there is no lost time in delivering or unloading.

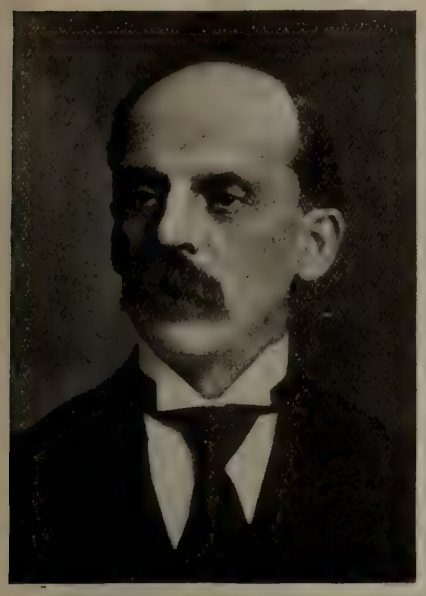
Newsy Jottings From the East

The big question at issue among mill workers and owners in New Brunswick is "the ten hour day." A few days ago about seventy-five men marched from Newcastle to the Fraser mills where a dozen men were at work on a ten hour day. They entered the shop and endeavored to persuade them to quit. The chief of police was sent for and succeeded in getting the men to leave. As the men were leaving someone hurled a block of wood which struck a man on the head. In the yard a team was unhitched from a cart and a load of wood scattered about. A later despatch from Newcastle said that the situation was unchanged and that the men were determined not to work ten hours a day. They are said to be willing to accept a cut in wages. Demonstrations continue, but no damage is reported. Geo. Burchill & Sons' mill is the only one working on the Miramichi. The employees are on a nine hour day.

* * *

Several lumber drives about the head waters of the St. John river and tributaries have been hung up and in some instances abandoned as a result of unfavorable conditions. Two of the drives hung up were those of the Fraser Companies, Ltd., on the western side of the river, and the Nashwaak Pulp & Paper Companies Ltd., on the Tay and Arnold Brooks. Warm weather and rain is needed to help right this condition.

Shantymen's Christian Work is Extending



Wm. Henderson, Toronto
General Supt. Shantymen's Christian Association.

Ever since 1908 when the Shantymen's Christian Association was organized by Wm. Henderson, of Toronto, for holding religious services in lumbering, mining and other camps, the work has grown in influence, importance and results. This fact was amply demonstrated at the annual meeting of the Association, which took place lately in Toronto, when encouraging reports were presented by various missionaries, who told of the interest which their message had aroused and the warm welcome they had received in the various provinces of the Dominion and in the States of Minneapolis, Michigan, Wisconsin and Kentucky.

The Shantymen's Christian Association is conducted on somewhat unique lines, if one may be permitted to use such a term, in that it does not permit its missionaries to take up collections in camps or sell any literature. The whole operations of the organization are financed on voluntary offerings from lumber, mining and pulpwood companies and other good friends who have this worthy cause at heart.

The extent and expansion of the campaign conducted by Superintendent Henderson and his staff of workers has been referred to many times in the "Canada Lumberman," and needs no rehearsal at this point. At the annual meeting of the Association, held in Bloor Street Presbyterian Church on Thursday, April 14th, there was a good attendance and some stirring addresses were delivered by men who had spent the winter in the camps. H. B. Gordon, of Toronto, president, presided and stirring remarks were made by L. R. Mont Gomerie, field secretary of Detroit; Rev. Thomas Joplin, field secretary of Ontario and Quebec; Wm. Henderson, Toronto, general superintendent of the work and others.

Since its inception the Association has sent forty missionaries to lumber and other camps, which the Gospel has not otherwise reached. Free copies of parts of the Bible and many pamphlets are given to men asking for them. During the past year 1,100 camps were visited and 55,000 men heard the Gospel. Of these 8,000 were French-speaking men and 13,000 were foreigners. The missionaries tramped on foot 7,000 miles through deep snow, over rough roads and in the coldest weather, yet at the annual meeting they all told a cheerful, hopeful story and were much encouraged with the outcome of the past year's operations.

The income for last year was $20,000, all of which was used as received, and more is required in order to extend the work during 1921.

The field divisions of the Shantymen's Christian Association consist of:North Bay as a centre and into Quebec; Sudbury District East to North Bay; Nipigon East to Sudbury District; Rainy River District to Nipigon; Manitoba and Lake of the Woods; North Saskatchewan—Prince Albert District; British Columbia—Vancouver Island; New Brunswick; Nova Scotia; Quebec Province.

United States. Michigan; Minnesota; Wisconsin; Kentucky.

The officers of the Association for the coming year are: H. B. Gordon, president; J. J. Gartshore, vice-president; William Henderson, general superintendent; W. H. Adamson, general treasurer; 15 Toronto Street, Toronto; Rev. Thos. Joplin, field secretary. British Columbia; W. T. Overstall, hon. sec'y.-treas., 1022 Granville St., Vancouver, B.C. New Brunswick and Nova Scotia Branch: J. F. Bullock, hon. sec'y.-treas., 187 Germain Street, St. John, N.B.

United States: Wm. Clancy, president, Lumbermen's Credit Asscociation, Chicago; Sam. H. Martin hon. sec'y.-treas., 412 S. Hoyne Ave., Chicago, Ill.; L. R. Mont Gomerie, field secretary, 244 Blaine Ave., Detroit, Mich.

Timber Trade Dull in Manchester District

Canadian Trade Commissioner J. E. Ray, at Manchester, Eng., writing the Department of Trade and Commerce, Ottawa lately, says: In many quarters of the United Kingdom there is in evidence a good deal of nervousness regarding the immediate future trend of the timber trade. In some centres conditions are more stable than in others, but there exists a general opinion that prices must fall considerably in order to increase the demand. Some of the new states of Central Europe were dumping timber into the United Kingdom during February at prices with which neither Scandinavia nor Canada could hope to compete. One firm interviewed recently, however, was not impressed by the quality. It is reported that the stocks held by many Norwegian mills are very large, and that unless orders are forthcoming the mills may be forced to discontinue producing for a time.

The values of spruce appear to be depreciating. Recently, Halifax 2 x 6 unassorted fetched £20 and St. John 2 x 4, £23 10s. Quebec seconds 3 x 6 have commanded £27 10s., and 3 x 9 firsts £48 10s.

Commenting upon the condition of the timber trade in Manchester, the Timber Trades Journal in its current issue says:

"The state of affairs in the timber trade goes from bad to worse. In fact, one could almost describe it as a panic. For a time importing should cease, and if needs be, terms could be arranged with the brokers, who are the only people at the present time to benefit by imports.

So far as sales go, there are very few, and every inquiry is keenly cut, for in many cases goods are offered at £8 to £10 below cost price in the hope of turning the stuff over."

Imports of Pine, Spruce, Fir, Sawn or Split, Planed or Dressed, 1913, 1919, 1920

Chief Countries of Origin—	1913 Loads	1919 Loads	1920 Loads
Russia	3,331,872	1,024,300	1,191,364
Sweden	1,366,780	1,611,534	1,780,630
Norway	294,053	400,174	304,164
United States	460,525	412,419	331,919
Canada	888,951	1,109,338	834,772
Total imports from all sources	6,451,023	4,568,901	4,531,740

In connection with imports of the above timber, there is an item in the Board of Trade returns under the heading "Unenumerated," of which 46,315 loads were brought in from Canada in 1919. The quantity imported last year is not stated.

Want No Tax On Unlicensed Companies

At the last regular meeting of the Wholesale Lumber Dealers' Association, held in Toronto, communications were read from Lee Blakemore, Inc., Chicago, Ill., Terry & Gordon, Limited, Toronto, E. D. Hardy & Co., Ottawa, and others in regard to the proposed bill of the Minister of Finance, imposing a 15 per cent. tax on premiums paid for unlicensed companies doing business in the Dominion of Canada. It was pointed out in one of the communications that if such legislation went into effect, it would effectively destroy the right which lumber companies and others have to purchase insurance from outside companies wherever they pleased. It was also urged that lumbermen should make request of their representatives in parliaments to see the Minister of Finance and oppose the proposed tax.

In a letter to A. E. Cates of Toronto, chairman of the Fire & Marine Insurance Committee of the Wholesale Lumber Dealers' Association, E. D. Hardy & Co., Ottawa, said: "We are enclosing a copy of the proposed amendments to the Dominion Insurance Act, imposing a tax of 15 per cent. on unlicensed insurance but not to exceed 15c for each $100.00 of insurance. According to our interpretation, the tax would apply as follows:

Rate 1%, tax 15c; rate 2%, tax 7½c; rate 3%, tax 5c; rate 4%, tax 3¾c; rate 5%, tax 3c.

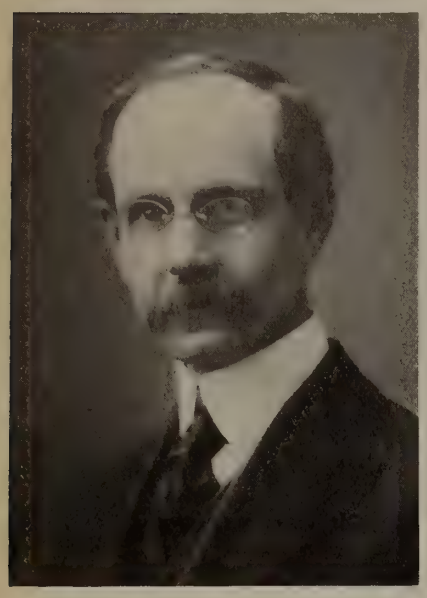
The Canadian Manufacturers' Association, it was stated, are vigorously opposing this measure as well as other bodies. On April 9th a meeting of the Fire & Marine Insurance Committee of the Wholesale Lumber Dealers' Association was held, and the proposed amendment was fully discussed. On motion it was decided that it would be detrimental to the interests of the wholesale lumber dealers of Ontario if the amendment should be carried.

It was pointed out that this amendment has been brought up to the House of Commons several times and defeated, and on account of business conditions throughout the country, it would be unwise to further aggravate the trade. A copy of this resolution was sent to Sir Henry Drayton, Minister of Finance, Ottawa.

Valuable Medium on Growing of Trees

John Wiley & Sons, New York, have published a text book on silviculture by Ralp C. Hawley, professor of forestry in Yale University. It is intended primarily for students in forestry schools, but any person who is interested in growing trees for commercial purposes or for ornament will be benefited by reading the book. The leading topics in the table of contents will indicate the field covered. These topics are: The various methods of starting a forest, such as clear cutting, seed trees, selection, coppice, intermediate cutting; slash disposal, forest protection against fire, insects and other enemies.

Frontier College Seeking Greater Aid



Alfred Fitzpatrick, Toronto
Principal of Frontier College

A. Fitzpatrick of Toronto, Principal of the Frontier College, (formerly the Reading Camp Association) which was founded twenty years ago and has conducted classes in the lumbering, mining and construction camps, is seeking a grant of fifteen thousand dollars from the Ontario government to assist in carrying on and extending the work of the institution. Speaking of the activities and plans of the Frontier College, in a recent interview, Mr. Fitzpatrick said: "Although some of our most prominent Canadians have been interested in the success of this institution from its inception, comparatively little has been heard about it. Owing to the nature of the work its buildings are 'far from the maddening crowd.' There is no question, the Frontier College had blazed an important trail in education among men in the camps.

"In reports published by this institution it has frequently been pointed out that, as so large a proportion of the revenue, from one-third to one-seventh, comes from woods, forests, and mines, and as approximately an equivalent amount is spent on education in Ontario, the men who bear the burden and heat of the day in producing this important part of the revenue, should have at least an equal share spent on their education to that spent in the older parts of the province.

"In 1910 revenue from woods, forests and mines was $2,753,590. In the same year $520,000 of that money went to the university in Queen's Park and only $500 to the Frontier College. I would not say that the universities get too much, but the Frontier College gets too little.

"In 1918 the revenue from woods, forests, and mines was $2,964,-161, and the amount spent on education was $2,799,645. The grant to the Frontier College was $2,500. It was not unreasonable to ask that a fair amount of this annual expenditure should be spent on extending school and college privileges to workers.

"About a month ago the executive of the Frontier College appointed Mr. James Playfair, Mr. D. B. Hanna, Mr. D. A. Dunlap, Principal Grant, of the Upper Canada College, and the principal of the Frontier College to memorialize the government with regard to this matter and ask that a grant of $10,500 additional be made this year, making a total of $15,000. In all justice a very much larger grant should be made, but we knew this would not be done at present and asked for the modest sum of $15,000.

"The Frontier College can make $1 go as far as the universities can make $10 go. This is due to two reasons, first, the lesser cost of buildings and equipment, and secondly, the fact that instructors earn the major part of their wages from the companies they are working with. Of course, it will be said in reply that the education one would get in the universities is much better than that obtained by a young man engaged in part-time study and part-time manual labor. I very much doubt this. The latter all-round education of hands, feet, and brain is much more practical in this busy, work-a-day world than the one-sided education of the universities. It is high time that we dropped the egoism and middle-age idea that education can only be had in separation from the world."

Budget of News in Short Shape

During a recent week about $200,000 in building permits were issued in Quebec city, which was equal to the total in permits during the entire month of March.

It is expected that the new and well equipped concrete sawmill of Gillies Bros., Limited, Braeside, Ont., which replaces the mill that was burned down over a year ago, will start operations in a few days.

Considerable building activity is reported in Montreal. During the first three weeks in April permits to the value of three-quarters of a million dollars were issued, which is triple the amount of permits taken out in January.

The members of the Inside Woodworkers' Union, of Ottawa, have protested the reduction in wages of from ten to twenty per cent. that four of the mill owners have notified their employees would go into effect. Previously inside wood-workers employed by various sash and door factories in Ottawa, received from 50 to 65 cents. an hour. In January they notified the mill owners that they would demand a general ten cent an hour increase commencing May 1.

Tree planting day was recently observed in Agincourt, Ont. More than 90 young trees—elms and maples—were dug up from the bush lots close to the village and planted along the streets. In the last four years the Horticultural Society has planted more than 400 trees.

The Canadian Forestry Association's tree-planting train stopped at Regina recently while en route to Calgary. The Saskatchewan Government has granted $1,000 for the work to be done in that province when the Alberta tour is completed.

In connection with the tree planting campaign being conducted this spring the Park Board of Stratford, Ont., announce that during "off week" for Grand Trunk shop employees young maples for street planting at their homes will be supplied up to a limited number by the board.

One of the largest lumber companies in Eastern Canada, writing the "Canada Lumberman," say: "We are not in a position to state just yet whether or not we will operate all our sawmills this season but if we do, we will run them on a ten-hour schedule. We have not increased our sawmill capacity this year as business conditions do not justify any new developments at the present time."

A meeting of the creditors of the Cut-to-Fit Lumber Co., Limited, was held recently in Vancouver. It is expected that an adjustment will be made which will enable the organization to continue operations. The Cut-to-Fit Lumber Co. received originally a grant of $50,000 from the B.C. Government under the Industries Act. Recently it made an application for another $50,000, but the Government saw fit to allow only $25,000, provided that the company could raise an equal amount from other sources. According to those directly interested, the company has sufficient orders to allow it to take up in the near future the stock issued its creditors, as besides orders from England and Japan, there is a fair demand for its product in the United States.

The keen interest taken by the public in the sale of the property of MacIntosh Bros., the lumber firm which assigned at Bathurst, N.B., on January 18 last, was shown by the large attendance. W. G. Fenwick was the auctioneer and the prices obtained for the different lots of property were quite reasonable. The planing mill property at West Bathurst was bid in by John McIntosh for $6,400 in addition to the mortgage and liens against it of $9,300, making a total price of practically $16,000. A rotary mill and two hundred thousand feet of logs went to E. J. Palmer, who is said to represent the MacIntoshes, for $2,500, as did a tract of timber land. The smaller parcels of property brought good prices. As the mill property goes back to the MacIntosh family, it is said to be their intention to resume operations immediately.

A recent despatch from Fredericton, N. B. says. As a result of refusal of the timber workers' unions to accept the return to the 10 hour day's proposal of the employers, thus causing strikes at the mills here and on the Miramichi River, some of the largest lumbering concerns in New Brunswick have announced they will not bring out their lumber drives this season, but will allow the logs to remain in in the streams. Recently it was stated that the Miramichi Lumber Company, who supply the International Paper Company's pulp mills in Maine, had decided to allow their Taxis River drive to stay in the stream above the dams. This drive it is said, consists of something like fourteen million feet, being one of the largest drives for any individual company in New Brunswick this year. It is reported today that the Fraser companies are taking similar action with their drives of logs intended for the Victoria mills here and also for their mill on the Miramichi, while the Snowball company of Chatham, are said to be taking the same steps.

Toronto will double its population in fifteen years and must by that time build 100,000 homes, according to Controller Hiltz in an address to the Home Builders' Association in Toronto. He claimed that builders would experience no loss by starting to build immediately, but he also pointed out that the patriotic thing to do would be to build well and in good style. He said that builders now had a check on labor and could, by choosing men, keep the malingerers away. City Architect G. F. W. Price said he could see no reason why this should not be the banner year for home building. Prices of material would not come down and the builders would not stand to lose on a falling market. Mr. Price also said that he had noticed a sudden spurt in home building when the city decided not to build its own homes. He believed that the building trade belonged to the builders and that it was not the function of any municipality to enter into the building trade. During the first half of April the value of house property in Toronto totalled over $1,500,000.

Problems in Standardization of Dimension Stock for Wood Using Industries

By William A. Babbitt, Chairman of the Committee of Standardization, South Bend, Ind.

The title of this series of studies correctly describes the purpose for which they have been written. Probably no one (certainly not the writer) who knows anything about the complexities and difficulties of the program of Standardization would assume to have the complete answer, or even to be able to state correctly all the problems. It is to be hoped, however, that these studies will serve to stimulate the rapidly growing interest in the standardization program, and to call forth suggestions and constructive criticisms from all concerned.

In order that lumbermen and wood users, who have not had the opportunity to follow the development of the Standardization Program thus far, may get in touch with the situation; a little history might be worth while.

The beginnings of the program are to be found in the efforts of one of the affiliated associations of the Association of Wood Using Industries to establish a sound and dependable basis for standard cost accounting among the member firms. A very exhaustive analysis of the raw material requirements of this association for lumber brought out a number of suggestive facts, and some that were positively startling. The logical and inevitable conclusion from these facts seem to indicate a gradual, but eventually, a complete revolution of procedure, not merely in this particular wood using industry, but in all wood using industries.

This analysis showed that on a merchantable lumber basis, the association's annual requirements were one billion eight hundred million feet, chiefly hardwoods. This analysis further showed that the logical and only satisfactory basis for the principal raw material factor of cost is not lumber, but Dimension Stock. An extension of the inquiry shows that this fundamental is also true of nearly all lumber used for fabricating purposes.

Six Hundred Million Feet Wasted

But when the board measure of this requirement in the form of Dimension Stock was determined, it was found to be only one billion two hundred thousand feet, board measure. Six hundred million feet are being wasted annually by the reduction of commercial lumber to usable dimension by this one industry alone — which is one of the smaller at that.

Furthermore, it appeared that the bulk of this requirement could have been produced from commercially low grade stock and non-commercial waste, now largely a total loss in lumbering operations. In fact, it has always been known that such a salvage could be made, and that not only the six hundred million feet, but the whole billion eight hundred million feet could be produced from such sources.

These considerations naturally raised the final and critical question: "With all these facts established scientifically, and a matter of common knowledge in a general way, both to the producer and consumer of lumber, why should there not be an immediate change to a sound and economical basis?" There is a very large and decisive number of reasons why such a change from a wasteful to an economic basis can be accomplished only by slow stages, against much static and some active opposition. Among these, it may be useful to mention some of the more important.

The most difficult feature of the situation is the hugeness of the proposition. It is huge in bulk. Put all the lumber piles in America in one huge yard, and it would be a small yard compared to the storage ground required to store the wasted portions of the trees from which the lumber was cut. This matter is not only huge in bulk, it is also huge in its interlocking relations with every place of manufacture in the country. It is a huge problem presented from the view point of mechanical equipment alone.

The change of basis from the present wasteful methods of wood fabrication to a basis of comparative canservation involves the organization of a manufacturing and sales proposition on the part of lumbermen which eventually will rival their organization for manufacturing and selling merchantable lumber. The problems of dimension sizes and grades are indefinitely more complex and difficult than lumber grades and specifications. The problem of education will be fully as difficult as that, e.g., involved in establishing a market for red gum. The Standardization Committee is fully aware of these considerations, and cherishes no delusions as to the difficulties ahead, or as to the slow progress that will be made toward their solution.

Under these circumstances, it became evidently both the duty and the opportunity of this Association to look for a solution of a condition which produced such enormous wastes; and prevented such huge salvages from the fast waning timber resources of our country. This, briefly, is the story of the beginning of the Standardization Program. The organization of the Association of Wood Using Industries and the friendly co-operation of the various associations of lumbermen have now placed this Program on a National basis.

Some Problems Which Have Been Solved

The first problem has been to get the necessary **entente cordiale** between the producer and the consumer with regard to the program of standardization. This has been by no means a simple, easy matter. It required the compilation of much data to establish a presumption in favor of the Program. Dimension stock is no new proposition either to lumbermen or to wood users. Past history has little to testify in its favor. Every lumberman has a choice collection of experience in manufacturing dimension stock, which every wood user can match in his attempts to use said stock. The proof has been fully established that the fault is mutual. The producer did not think that it was worth while to manufacture his dimension properly. He looked down on the job, instead of up to it. The user took the view that because it was dimension stock, and probably manufactured from waste, he ought to be able to buy it at one-half to one-third its real value.

Both parties are now well in accord. Dimension stock is of such high importance that it is entitled to first consideration in care and accuracy of manufacture. Wood users realize that dimension stock, so manufactured, is the most valuable and economical form in which they can get their raw material; and that to get it, they must pay what it is worth. This means a market price which will make the manufacture of dimension stock a commercially sound proposition for the producer.

The elimination of the "Specialty" hazard, in the manufacture of dimension stock, is another problem which has been successfully disposed of. Formerly, both parties to a contract for dimension stock, assumed a risk which does not apply to commercial lumber, viz., the exceptional loss should either party to the contract fail to keep his agreement. If the user failed to take the stock contracted for, then the producer had left on his hands an unsalable commodity. If the producer failed to deliver, then the user was left with his production crippled or stranded. That this has been no uncommon experience in the past, every party at interest can testify from costly experience.

The Standardization of all Requirements

The answer to this problem is "Standardization." By this, we do not mean the standardization of an individual plant, but the standardization of the various wood using industries. If a lumberman knows that the production of his dimension mill is standard for an industry or several industries instead of merely being the requirement of an isolated plant, he will have no hesitation in undertaking to manufacture against any orders he may secure, and in a conservative way, to manufacture against the probable requirements of the industry as a whole. On the other hand, the wood fabricator will not hesitate to place his requirements with certain mills, when he knows that he is protected by a lumbering policy which is producing the exact stock he uses, in other mills than his contract source.

Standardization will serve also to eliminate another grave evil, altogether too common in the past. Reference is made to disputes between producers and consumers as to whether the stock furnished is according to specification. Sometimes these disputes have not been a fair question between the parties. They have been unfair attempts by one of the parties to void a responsible contract. With standardization in effect, such disputes can be settled by a neutral third party, or otherwise authoritatively disposed of.

In a single word, **the standardization program rests on the two fundamentals of making it as safe to manufacture or buy Dimension Stock as to manufacture or buy merchantable lumber.**

In succeeding studies, it is the writer's intention to state as carefully as possible the special problems of both lumbermen and wood users in connection with the Standardization Program. An attempt will be made to show our method of procedure, and to exhibit results already obtained by the application of this method.

Personal Paragraphs of Interest

Ellwood Wilson, of the Laurentide Co., Ltd., Grand Mere, P.Q., has just returned from a trip to Florida.

Word has been received in the East of the serious illness of R. H. Underhill, of the Underhill Lumber Co., Vancouver.

C. McCrae, managing director of the Alberta Lumber Company, Limited, Vancouver, spent a few days in Toronto recently on business.

A. C. Stover, sales manager of the New Ladysmith Lumber Co., Nanaimo, B.C., is spending a few weeks in Toronto and other eastern cities.

George D. King, representing Bradley, Miller and Co., wholesale lumbermen, Bay City, Mich., spent a few days in Toronto lately on business.

The Mason-Kimball Lumber Co. have removed from 212 McGill Street to Room 16, Bank of Ottawa Building, 224 St. James Street, Montreal.

W. M. Simpson, manager of the Long-Bell Lumber Co., Cleveland, Ohio, was in Toronto lately for several days, calling upon members of the trade.

Frank Hawkins, of Ottawa, secretary of the Canadian Lumbermen's Association, and Mrs. Hawkins, who spent a few weeks at Atlantic City, have returned home.

A. E. Gordon, of Terry & Gordon, Limited, Toronto, left recently on an extended business trip to British Columbia in connection with the firm's activities on the Pacific Coast.

M. C. Lighter, formerly of the Montreal office of the Canadian General Lumber Company, Limited, has started in business on his own account in Montreal as a lumber broker.

Grey, Morris, Ltd., wholesale lumbermen, have removed from 23 Jordan St., Toronto, to larger office quarters at 411 Manning Chambers, corner of Queen West and Terauley Sts.

A son—Kirk Wood 2d—has been born to Mr. and Mrs. W. T. Hobart, Montreal. Mr. Hobart is the Canadian representative of Hobart & Co., wholesale Southern hardwoods, Boston.

Frank L. Reed, who is a well-liked lumber salesman and enjoys a good connection with the trade, has joined the selling force of the Union Lumber Co., Toronto, and is now covering Western Ontario for them.

Archie Dimmell, who spent the past winter in Arnprior, and was a popular member of the champion hockey team in that town, has taken a position with the Strong Lumber Co. at Bennie, Ont., for the coming season.

C. J. Brooks of Toronto, who is well-known throughout Ontario as a salesman of B.C. forest products and has been for several months past associated with Rose-McLaurin, Limited, Toronto, has joined the selling force of the Canadian Western Lumber Co., Toronto. He will be associated with E. C. Parsons.

W. J. Markle, superintendent of the Boake Mfg. Company's plant, Toronto, met with a serious accident lately. He was putting out a milk bottle in front of his home when he slipped on an icy step and fell, fracturing his leg.

Robert S. Laidlaw, of the R. Laidlaw Lumber Co., Toronto, and Mrs. Laidlaw, who have been spending some months on a winter holiday trip to Japan and China, have returned home. They greatly enjoyed their outing.

Harry Mawson, of Anderson, Shreiner & Mawson, wholesale lumber merchants, Toronto, and Mrs. Mawson, who have been spending several months in Great Britain and France on a holiday have returned to Toronto.

Alex. Greig, of Greig, Morris, Limited, wholesale lumber dealers, Toronto, will leave shortly to spend several weeks at his summer home at Bala, Ont. Mr. Greig has not been enjoying the best of health for some time, and will take a much-needed rest.

Gilbert S. Lay, of the firm of Lay and Haight, wholesale lumber dealers, Toronto, who has resided for the past thirty years in Buffalo, N.Y., has purchased a home in Toronto at 88 Glen Road and along with Mrs. Lay and family taken up his residence there.

J. R. Kennedy, formerly manager of the Port Hope Lumber & Veneer Co., has been appointed representative of the Freiberg Mahogany Co. of Cincinnati and New Orleans. He will handle their line in Canada and the eastern parts of New York state.

Oscar M. Thomson, of Syracuse, formerly Northern New York State representative of the Union Lumber Co., Toronto, has severed his connection with the company and is now doing business in New York city, having organized the Thompson Lumber Co., which will handle various lines of Canadian softwoods.

L. D. Barclay, who for some time past has been on the staff of the Central Canada Lumber Co., Toronto, has rejoined the Canadian Western Lumber Co., with whom he was previously associated for some ten years. Mr. Barclay is one of the most widely known and aggressive lumber salesmen in the East and his headquarters will be Toronto.

Wm. Robertson, who was for many years in the lumber business in Shelburne, Ont., but retired four years ago, died at the residence of his son, A. H. Robertson, 456 Palmerston Boulevard, Toronto. The late Mr. Robertson was born in Galt 83 years ago and had lived in Guelph some time before coming to Toronto. He is survived by two sons.

Efforts to build up a permanent market for British Columbia in Egypt and neighboring countries are to be made by Major R. E. Fisher, who recently visited B.C. in connection with an order for eight million feet of ties which he placed for the Egyptian railways, according to word received by Hon. T. D. Pattullo, Minister of Lands, from Major Fisher.

A. C. Manbert, of the Canadian General Lumber Co., Toronto, gave an interesting and entertaining address recently on "Club Fellowship" before the Lake Shore Country Club. W. Frank Oliver of the Oliver Lumber Co., Toronto, who is president of the club, presided and among the other speakers was Hon. Manning Doherty, Ontario Minister of Agriculture, who talked on "Club Life."

D. H. Haight, of Haight and Dickson, Sudbury, Ont., was in Toronto recently calling upon the trade. The new sawmill of the firm, which was built last year at Bethnal on the line of the Canadian National railways, has started operations for the season. The cutting capacity is about 35,000 feet daily and railway ties, jack-pine, spruce and white pine will be sawn. The firm expects to turn out over three million feet this season.

C. E. Harris, who for several years was connected with the freight department of the Canadian Pacific Railway, Toronto, and served overseas, has been appointed traffic manager of Terry & Gordon, Limited, Toronto. J. E. Green and J. O. Bennett, who have been associated with the executive staff for some time, have recently been transferred to the sales force of the firm and will cover Eastern Canada and New York state.

E. J. Palmer, general manager of the Victoria Lumber & Mfg. Co., Chemainus, B.C., intends retiring at an early date. For more than 30 years he has been identified with the British Columbia lumber industry and feels that he is entitled to a rest. He grew up with the lumber calling on Vancouver Island and before he came west, was railroading and did some cruising and logging. The first mill he was ever associated with was the one he established at Chemainus, which is among the largest in the province, cutting about 200,000 feet a day.

Capt. Walter R. Clarke, M.C., has removed from Edmundston to Fredericton, N.B., where he has taken up his residence. Capt. Clarke has been identified with the shipping department of the Fraser Companies, Limited, at Edmundston since his return from overseas, where he served with distinction with the 26th New Brunswick Battalion. He has been promoted to the position of superintendent of the Fraser Companies' mills at Magaguadavic and has taken up his new duties there. At one time he was publicity commissioner for the Fredericton Board of Trade. John W. Currey, who has been manager at Magaguadavic, has been transferred to the Fraser Companies' mills at Glendyne, Que.

Hon. T. W. McGarry of Toronto, president of the Whalen Pulp & Paper Mills, has returned from paying a visit to the company's plants in British Columbia. He reports satisfactory conditions in connection with the operations. The three pulp mills are running to full capacity under contracts made last fall, a large portion of the sulphite produced being shipped to Japan. The output is close to 5,000 tons of sulphite per month. The company's two sawmills are also operating to a capacity of 250,000 feet a day. The contracts for sulphite will keep the pulp plants running for some time yet. It is stated that the Whalen mills, being located on tide water, have an advantage over most Canadian pulp and paper plants, being largely independent of the high railway rates.

Hart & McDonagh, wholesale lumbermen, 152 Bay Street, Toronto, who have been in business for the past five years, have dissolved partnership. R. F. McDonagh, the manager, has formed the McDonagh Lumber Co. and taken offices at 203-204 Confederation Life Bldg., Toronto. It is understood that G. P. Hart, secretary-treasurer of Hart & McDonagh, will organize a new concern under the style of Hart, Hamilton & Jackson, the partners being G. P. Hart, H. A. Hamilton, accountant of the firm, and C. C. Jackson, lumber inspector. They will open offices at 701-702 Bank of Hamilton Building, Toronto, in the near future. Mr. Hart, who resides in Picton, Ont., has just recovered from a serious illness. The McDonagh Lumber Co. will handle both hard and softwoods and do a general wholesale business. Mr. McDonagh is well-known to the industry, having been eight years with the Trout Creek Lumber Co. of Powassan, and four years with Edward Clark & Sons as buyer and inspector.

Pulpwood and Its Varied Activities

Its Most Expensive Crop of Pulpwood

According to the figures of the Logging Division, the Laurentide Company cut approximately 170,000 cords this past winter. While this amount is not as large as the cut made the previous winter, when added to the amount left in the up-river districts, it gives the company the largest and perhaps the most expensive crop of wood in the history of the company.

This last quarter's operations are divided about as follows: La Tuque, under the supervision of Bruce Baxter, made 75,000 cords; Gatico, with H. Lavoie in charge, 28,000 cords; Casey, L. P. Bellefeuille, manager, 23,000 cords; La Macaza, A. L. Bardwell, 6,000 cords; St. Michel des Saints, B. C. McLaren, 29,000 cords; and St. Maurice, B. L. Butler, 9,000 cords.

Approximately half the cut of the winter before last is still in the streams and will be driven this spring. This is on account of the fact that much of the wood cut is at such distances from the mill that it takes two years before it arrives. In view of this condition, it will be seen that it is necessary to carry a large supply of wood over from winter to winter. Logging operations, because of this fact, and because also of drive conditions which may or may not be satisfactory, have to be two years ahead of time and there has always to be a large margin of safety in the cut to take care of possibilities, such as low water, sinkage, fire, etc.

Three New Directors on Riordon Board

At a meeting of the directors of the Riordon Co., held in Montreal, changes of an important nature in the personnel of the board were carried into effect. Chas. Riordon, the veteran head of the company, who up to the present time has been president, has been elected honorary president, and Carl Riordon, formerly vice-president and managing director, will succeed him in the chair. Frank P. Jones, general manager of the Canadian Cement Co., has joined the Riordon board and is now vice-president of the comapny. It is understood he will take an active part in the administration of its affairs. Three other new directors were added to the Riordon executive in the persons of George M. McKee, general manager of the Donnacona Papr Co., Donnacona; Frank E. Bronson, of the Bronson Co., Ottawa, and F. N. Southam of the Southam Press, Montreal. No statement was made dealing with the new financing of the company, but it is expected some definite development will take place during the coming week.

Line Will Facilitate Pulp Business

The development of the lumber, pulp and paper and other industries has led to a proposal, which is now being worked out, for a line of steamships between Three Rivers and United States ports, thus giving a direct connection with the markets across the border. The port of Three Rivers lends itself admirably to such a scheme, the harbor there possessing the essential natural facilities for handling the business emanating from the new paper mills there, together with that from up the St. Maurice. Mr. J. E. Aldred, president of the Shawinigan Water & Power Company, thus states the position: "Steamers plying between Three Rivers and United States ports, such as Baltimore, for example, could carry the diversified products of the district, such as pulp, paper, chemicals and so forth, directly or almost so, to their destination and return with cargoes of essential products, such as coal, sulphur and other raw materials, used in the manufacture of the Canadian commodities. Transportation costs constitute a vital element in the industrial field and we feel that these can be reduced to the advantage of the many industries which have been attracted to the province by reason of the splendid power facilities offered."

St. Maurice Earnings Show Big Gain

One of the most satisfactory annual exhibits recently disclosed by Canadian industrial enterprises is embodied in the statement of the St. Maurice Paper Company, Ltd., Montreal, covering the twelve-monthly period ended December 31 last. The company, which is a subsidiary of the Union Bag and Paper Company, ranks among the younger ones of the pulp and paper industries, but from the 1920 showing it would appear that the five years of its existence have been characterized by a growth of a somewhat phenomenal nature. Gross earnings and income from miscellaneous sources, including that accruing through the existing high rates on New York Funds, amounted to $2,976,636, or more than double those of the preceding period, when the total reached $1,418,804, the actual gain being $1,557,832.

After deductions, including depreciation allowance and the setting aside of the $800,000 out of the year's profits as a reserve for contingencies and Government taxation, against $100,000 a year ago the net profit for 1920 amounted to $1,769,988, compared with $563,924 in 1919, or more than treble.

The year's net was equivalent to 22.68 per cent. on the increased capital stock outstanding, aggregating as at December 31 last $7,899,900, against 11.27 per cent. in 1919 on a capital stock of $5,000,000.

Association Starts "Buy at Home" Propaganda

An extensive propaganda has been launched by the Canadian Pulp & Paper Association in favor of purchasing Made-in-Canada goods. The publicity is being carried out through twelve interesting and unique folders, showing Canadian-made papers and their uses. These are being mailed weekly to consumers and others throughout Canada.

The initial folder is headed "How You Can Make Your Dollar Worth 100 Cents," and points out that there is a Canadian paper for every use; that local houses can furnish quick service for rush jobs, and adds that there is a chance to help buy Made-in-Canada goods, not only at low cost but at an actual saving. It is asserted that as long as Canada continues to import foreign products in excess for exports, the Canadian dollar cannot get back to a 100% basis, "and it should not be forgotten that this adverse exchange affects the price of every sort of goods one buys in the Dominion. Last year Canadians imported considerably over a billion dollars' worth of goods. Over 68 per cent. of these imports came from the United States and were paid for with Canadian dollars on which the exchange averaged from 10 per cent. to as much as 17¼ per cent.; in other words, for every dollar's worth of United States goods, Canadians paid and are paying $1.10 to $1.17¼ in addition to the duty."

New Fibre Box Factory Now Running

The new 50-ton kraft pulp mill of Clarke Bros., Limited, at Bear River, N.S., has started operations. Clarke Bros. Paper Mills, Limited, have also started making boxes in their new plant at Glen Falls, which is just outside of St. John, N.B. The factory consists of two buildings which will be used exclusively for the manufacture of fibre board as well as corrugated and fibre board boxes, which will be made from the highest grade of kraft pulp. The latter will be shipped across the Bay of Fundy by Clarke Bros. from their Bear River plant.

Protective Association Shows Fine Films

An interesting and instructive entertainment recently took place at Matane, Que. There were shown on the screen two splendid films, one depicting the operations of Messrs. Price Bros. & Co., Ltd., in the Saguenay district while the other was of an educational character, entitled, "The Enemies of the Forest." These were displayed under the direction of J. D. Brule, eastern manager of the Southern St. Lawrence Forest Protective Association, Limited.

The people of Matane and vicinity were afforded an idea of the importance and significance of forest protection. A film, showing the operations of Price Bros., gave a splendid revelation of how the virgin forest is turned into paper. A brief description of the scenes presented in each film may be of interest. Spruce and balsam are most used in the manufacture of paper, and, in cutting these trees in the province of Quebec, a temperature of from 15 to 50 deg. below zero is often encountered. The trees are chopped down and sawn into uniform lengths and hauled to the river on sleighs. In one season no less than 50,000,000 feet of spruce is conveyed to the banks of the Riviere aux Ecorces. The picture showed that when the road is steep and dangerous hay is used to stay the too rapid descent of the sleighs. Most of the camps shown revealed really good dwelling houses and all the portaging is done by sleighs. 5,000,000 lbs. of provisions and 3,000,000 lbs. of hay and oats are used annually by Price Bros. in the Saguenay District.

Sometimes the logs are piled in the bush and are loaded by means of a bull-chain arrangement, into a train of sleighs. This train is hauled by a steam tractor and has a capacity of 150 cords of pulpwood. The scaling of the wood is done at the river.

The pictures disclose that the lumber-jacks seem happy and don't worry about the cares of the world.

The views representing the drive were also striking, showing

the logs rolled into the river and how dams are used to gather water and help driving. The men have very long hours but they have also four meals daily. Another unusual spectacle is where capable men, instead of walking through the bush to their lunch, hop on a log and float down stream to the spot.

The most interesting part of the drive is to see a jam. Dynamite is used and sometimes without success. Finally a jam which might hold 300,000 or 400,000 logs, lifts and travels as a unit until it meets swift water; then it gradually breaks up and follows the course of the stream in a less troublesome way. Some jams remain the same for several days and needless to say the blockade stops all progress on the river above the jam as well as below it. 135,000 cords of pulpwood or 4,590,000 logs are manipulated annually in Kenogami Lake by steam tugs.

In the making of paper the pictures show how the logs go into the wood room and are cut into 3-foot lengths by circular saws. They are then carried to the barking drums. Some logs next proceed to the sulphite mill and others got to a water sluice, a mile in length, to the paper mill. In the ground wood pulp mill at Kenogami there are 45 grinders with a capacity of 6 tons a day each. Here the fibre, which is all that is now left of the logs, goes through other processes until it comes out of the big paper-making machine as a finished article.

In the film, "The Enemy of the Forest," a good example is furnished, demonstrating the difference between carelessness and negligence. The lesson driven home is that if you are on a picnic, put out your fire; if smoking in a bush, do not throw away burning cibarettes, lighted matches or cigar butts, which might ignite the leaves or brush. Each province has a system of fire protection that puts a ranger on the highest points of the forest. He has a telephone line to communicate with workers. The province of Quebec is now developing its protective plans and, in a few years, will have a system of telephonic communication and safeguarding devices developed to a high degree of efficiency.

The officers of the South Western St. Lawrence Forest Protective Association, Limited, whose head offices is at 56 St. Peter St., Quebec, and under whose auspices the foregoing films were shown are W. Gerard Power, honorary president; R. L. Montgomery, president; Paul G. Owen (Quebec) secretary-treasurer. The officers and directors of the western division are J. V. Perrin, vice-president; C. B. Guerin, (Quebec), manager; W. G. Power, H. M. Wilson, Arch. Fraser, F. G. Quincy, D. C. T. Atkinson, E. A. Rockett, directors. For the eastern division Chas. R. MacLeay is vice-president; J. D. Brule (Campbellton, N.B.), manager; Angus McLean, D. Champoux, Wm. Russell, E. S. Holloway, H. Calhoun and George C. Scott, directors.

New Pulp Mill for Northern Ontario

A new, forty ton ground wood pulp plant will be erected at Dickson Creek, which is half way between Haileybury and New Liskeard, Ont., in the township of Brule. The location is on the T. and N. O. Railway on the shores of Lake Timiskaming. The company, which has the project in hand, is the Timiskaming Pulp and Paper Co., Limited, which has recently been incorporated, with an authorized capital of $500,000 and head offices in Toronto. Alex Fasken, of Toronto, who is a widely known barrister and a director of several pulp and paper companies, is president of the organization and C. C. Calvin, Toronto, secretary-treasurer. H. S. Hennessy, lumberman of Haileybury, is one of the chief promoters of the organization. The new plant will cost half a million dollars. The company owns fifty square miles of timber limits in Quebec along the river Quinze in the Lake Expanse district, containing 260,000 cords of spruce pulpwood as well as other woods. The plans for the new enterprise have been completed and it is expected that construction will be finished and the mill in operation next year. Much interest is being developed in the north over the project.

To Use White Birch for Pulp

Tiers of white birch, to be used as a distinct addition to the usable basis of pulp manufacture, are piled high in the stock piles of the Penobscot Chemical Fibre Company, according to a press dispatch from Old Town, Me., and are attracting much attention. The company has been experimenting for several years with various kinds of wood for this product and results have been so satisfactory that it is understod that in another year practically every kind of tree on the tract will be peeled for use in making pulp. While all trees are not equally adaptable to the making of pulp, the harder ones, cooked longer and mixed with the softer varieties, make the supply hitherto depended on for the making of pulp go much farther.

Objects to Alienation of Pulpwood

A resolution was recently passed by the Manitoba Legislature, protesting against the alienation of 81 townships of pulpwood. The vote was an adverse one so far as the Norris Government is concerned, the speakers for that body taking the position that the opening of the timber limit would help develope the country.

A recent despatch from Winnipeg said the resolution came up through Mr. Stanbridge, member from St. Clements, in whose constituency the timber limit lies. Mr. Stanbridge offered a protest since the application was made by a company in which Edward Brown, provincial treasurer, is largely interested. In his resolution Mr. Stanbridge stated that the Government was claiming to carry on negotiations to obtain the natural resources for Manitoba, while at the same time a member of the cabinet was interested in securing a considerable portion of these same resources, to wit, 81 townships of pulpwood.

The resolution further recited that the Dominion Government had advertised for bids on the limit in February to be closed in March, when it would be impossible to send cruisers into the country to examine the limits; therefore there could only be but one intelligent bid and that from the company in which Mr. Brown was interested, which had previously cruised the limit before making application.

A resolution was presented later in the Manitoba Legislature on behalf of the Labor group, calling upon the Norris Government, in view of it being defeated, to resign and turn over the administration to a cabinet composed of representatives of the various groups. This was defeated by the casting vote of the speaker.

Portable Rossing Plant for Quebec

There was recently shipped to one of Price Bros.' mills in Quebec a portable rossing outfit that could be moved quickly by rail and operated on sidings or spur tracks. The Waterous Engine Works Co., Ltd., of Brantford, supplied the equipment which consisted of

Rossing equipment that is easily moved.

two barkers, engine set on boiler, haul-up and single saw slasher. All this equipment is mounted on an ordinary-sized car. The entire barking outfit was placed on a flat car which was finished complete. the sides of the car are hinged so that they can be elevated out of the way when the mill is being operated. The portable rossing mill is something new in the way of equipment in the pulpwood line.

Brompton Completes New Pulp Mill

A. P. Costigane, Secretary and Safety Engineer of the Ontario Pulp and Paper Makers' Association, recently addressed the employees of the Brompton Pulp & Paper Company, East Angus, P.Q., on the subject of "Accident Prevention." He cited the example of the Spanish River Pulp and Paper Mills Limited which recently instituted a "No Accident week." The address was illustrated by a number of moving pictures.

Representatives of a number of Bond Houses from Montreal and Toronto recently inspected the mills of the Brompton Pulp & Paper Company at East Angus and Bromptonville.

Mr. J. A. Bothwell, the general manager, presided at a luncheon given at East Angus, to the representatives.

The Brompton Pulp & Paper Company have now completed their new ground wood mill at East Angus, P.Q., and have installed the machinery.

In a recent article a leading magazine declared that these are trying times. Men are being tested as never before and are being either shaken up or shaken down. Another authority avers that we are living in a period of constant shifting. It is an age for the men who do. The fellow who waits for to-morrow, waits and waits, and the years glide by and find him still waiting.

Business Barometer Rising Steadily

The Pendulum is Really and Truly Swinging Other Way, Declares Southern Lumberman

The barometer is going up, and as much as I dislike to use that old bromide—the pendulum—as an illustration, I must acknowledge this delightful spring morning that the pendulum is really and truly swinging back; and just as we were recently in the midst of a panic before we knew it—all because we could wrap about us the smoke screen of the protection of the Federal Reserve Banking System—just so we have now actually run out from the trouble into the brighter day and the brighter hour without realizing it, said A. L. Clark recently in an address before the Southern Pine Association at New Orleans. Mr. Clark is president of that association and is far from being a pessimist or a dyspeptic.

We have stood for several weeks absolutely at the bottom—and we are now on the upturn.

I do not often indulge in prophecy. I do not mean to have what I say now take on the semblance of prophecy. It is to be more exact than that. I wish to state what I believe to be a fact! We have reached the bottom—the far outrunning end of the tide—and the tide is coming back.

Now a lot of us sat around in the new kind of "panic times" and felt secure, felt that everything was going right, and did not sense that we were in trouble, when as a matter of fact we were in the deep water of trouble right up to the edge of our underlips, and did not know it. So. this being true, it also follows that we had begun to go uphill slowly "under high," and did not know that we had shifted the gear. Some of us are still howling to high heaven about this and that and the other thing, when we should really be looking ahead and looking up to the Divine Providence that has pulled us through the flood and is edging us up to that lookout on the hill from which in a short while we may once again see the land of Canaan and the virgin whiteness of the milk, and the glinting flow of the honey of an established prosperity.

Just now I would like to organize a society and become its trustee and all its officers, and be priviliged to subsidize what we might call "The Society of the Diminishing of Croakers."

Of course, God has made a few croakers just as a backstop to happiness, but they are all like dear old Benjamin Franklin's croaker, whom I shall introduce to you in Franklin's own quaint language as follows:

"There are croakers in every country, always boding its ruin. Such a one then lived in Philadelphia; a person of note, an elderly man, with a wise look and a very grave manner of speaking; his name was Samuel Mickle. This gentleman, a stranger to me, stopped one day at my door, and asked me if I was the young man who had lately opened a new printing house. Being answered in the affirmative, he said he was very sorry for me, because it was an expensive undertaking, and the expense would be lost; for Philadelphia was a sinking place, the people already half bankrupts, or near being so; all appearances to the contrary, such as new buildings and a rise of rents, being to his certain knowledge fallacious; for they were, in fact, among the things that would soon ruin us. And he gave me such a detail of misfortunes now existing or that were soon to exist that he left me half melancholy.

"Had I known him before I engaged in this business, probably I never should have done it.

"This man continued to live in this decaying place and to disclaim in the same strain, refusing for many years to buy a house there because all was going to destruction; and at last I had the pleasure of seeing him give five times as much for one as he might have bought it for when he first began his croaking."

Just as we are on the edge of summer the busy boys will go out again with little gridironed wire "tricks" with which to swat the flies.

I wish all mankind—that is that kind of mankind which "has backbone and not wishbone," to paraphrase former Senator Cartwright—would consent to go out with a much more formidable tool than a fly swatter with which to swat the croaker.

The croaker is the man I am after from now on, for the tide has turned, and we want no more black and pessimistic prophecies, for they are more dangerous poison to the business mind than bootleg alcohol is to the human stomach.

Panama has many tropical woods. There are estimated to be about 1,000,000 laurel trees in Panama valued at $60,000,000; about the same number of the guayacan tree worth $40,000,000, very hard and suitable for shuttles, etc.; about 100,000 of the beautiful cacique trees, whose wood is hard and impervious to insects.

Getting Down to Brass Tacks

Writing to the "Canada Lumberman" the general manager of a leading firm in British Columbia says: "In reading your recent Statistical Number I notice a lot of optimism is expressed, and I find myself wondering if operators are doing any good by proclaiming a satisfactory condition and outlook in the face of such actually unfavorable conditions as we are now experiencing."

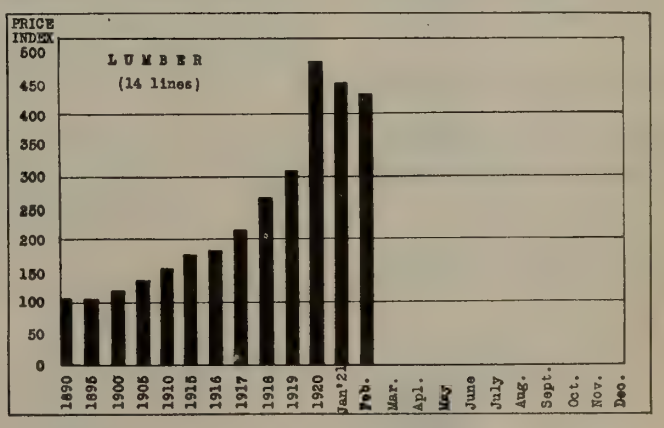
Continuing, he remarks: "For instance, prices and demand do not warrant, or justify, the sawing of a foot of lumber, but by spouting optimism, does it not create a false impression and possibly lend confidence to certain operators to start up and increase production, when more reliable counsel would advise the contrary? I cannot see anything to be gained by kidding ourselves into believing something that is not so. We have got to get down to brass tacks and flatten out the high price peaks so that people who want to build may have the confidence that they will not lose money by proceeding with their plans. In a letter just received from Babson, he says anyone that is not compelled to build immediately, will save at least 30 per cent. if he postpones operations until next fall. There is going to be a lot of lumber consumed, but apparently it is not going to be this year. I am not by nature a pessimist, but I believe we should have something more substantial than a random guess to base a lot of optimism that is being indulged in."

Seeking to Reduce Mill Men's Wages

Many of the large paper mills in Canada are endeavoring to cut the wages of their employees by 30 per cent.; increase the eight-hour day of the regular working force to nine hours; to stipulate that Sundays and overtime work, for which time and a half is now granted, be paid for on a straight schedule; and that unskilled or common laborers, now members of the union, be dealt with on the open shop principle, be paid at rates prevailing in the industry elsewhere. Votes have been taken by various paper-making unions who have decided, by large majorities, to refuse to accept a 30 per cent. reduction.

Speaking for one of the large paper manufacturing concerns, the manager said that readjustment of wages was necessary if the mills were to continue in operation. The present state of the paper-making industry is not as bright as it had been pictured, and only by a considerable lowering of the cost of production could the mills be kept running on full time and continue to produce at the prices prevailing. He said that for some weeks his company had been making paper for stock in order to keep the works going.

Rise and Fall of Lumber Prices



LUMBER——The fluctuations in the wholesale price of 14 lines of lumber from 1890 to February, 1921, are shown above. The average price from 1890 to 1900 is taken as the base, or 100. The peak was reached in May, 1920, when the index number was 533.9. In February, 1921, this had receded to 432.6, a decline of 18.9 per cent. from the high mark. The outlook for the immediate future is, from present indications, one of average demand. Prices are working more closely in line with the general level.—MacLean's Building Reports.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

Wanted—White Pine

One or more cars 4 and 5/4 stained, good good short white pine. Mell & Sons Lumber Company, Philadelphia, Pa. 6-9.

Wanted Lath

Prices on Hemlock and Pine Lath delivered Detroit rate. Brewster Loud Lumber Co., 1307 Majestic Building, Detroit, Mich. 9-12

Wanted

Several cars No. 3 and culls 1" x 4 up. Maple, Birch, Beech, Elm, Spruce, Basswood or Pine. Box 571, Canada Lumberman, Toronto. 9-12

Lumber Wanted

I am open to buy spruce box lumber 13/16" thick, P.I.S., 4" up; length, 6 to 16'. Address Box 556, Canada Lumberman, Toronto. 6-13

Lath Wanted

Will buy any quantity, White Pine, Spruce or Hemlock. Please quote your best cash price f.o.b. Toronto. C. W. James Jr., 358 Greenwood Ave., Toronto. 6-13.

Pulpwood

We are open to buy a limited quantity of rough and peeled spruce and balsam pulpwood for immediate and future delivery; cash on shipment. Log Export and Import Co., 241 Beaver Hall Hill, Montreal. 8-11

Lumber Wanted

In carload lots, for immediate shipment, dry clear Basswood, Spruce, Pine or Mixed Squares. 1—⅞" x 1⅛" x 50"; 1¼" x 1¼" x 50—. Also for August, September and October shipment. Box 562, Canada Lumberman, Toronto. 9-11

Wanted—Spruce

Send us your spruce stock sheets and prices.

Edmund A. Allen Lumber Co.,
812 Chamber of Commerce Bldg.,
9-12 Chicago, Ill.

Lumber For Sale

Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co., Jamestown, N.Y. 6-t.f.

For Sale

300,000 feet Birch in logs ready to start sawing under National rules. Offered as No 3 common and better. Apply P.O. Box 6, Victoriaville, Que. 6-tf.

For Sale

New cut sawdust in car lots also green hardwood and green softwood trimmer blocks and ends 6" to 36" long. Car lots of each kind. Box No. 555, Canada Lumberman, Toronto. 8-9

Ash For Sale

Four cars 4/4 log run Black and Brown Ash for sale, last season's cut, in good shipping condition. For further information write Card Brothers, Mountain Grove, Ontario. 15

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

FOR SALE—Hickory dimension squares and flitches. It is true economy to purchase our stock sawn to your net dimension. J. Murchison & Son, Dickson, Tenn. 6-9

Machinery Wanted

WANTED—Two heavy log or lumber trucks. Box 257, Canada Lumberman, Toronto. 11-t.f.

Wanted

Portable Sawmill with edger, second hand, good condition. Send full particulars to G. Silverthorn, Islington, Ontario. 9

Machinery Wanted

Two—8" or 7" steam feeds in good condition.
9 W. H. COOK, Orillia, Ont.

Wanted

Circuar saw filing machine to handle 50" to 60" circular saws, must be in good condition. State price and maker's name. Box No. 554, Canada Lumberman, Toronto. 8

Machinery For Sale

For Sale

One covel automatic band saw grinder for double cutting saws; a bargain; immediate shipment. The Muskoka Wood Mfg. Co., Huntsville, Ont. 6-9.

For Sale—Locomotive

One 28 Ton 3 Cylinder 8 x 10 Standard Gauge Lima Geared. Located in Canada. Box 376, Canada Lumberman, Toronto, Ont. 19tf

For Sale

ELECTRIC STORAGE BATTERY LOCOMOTIVES FOR SALE, Two 36" Gauge. Complete and in good condition.

R. T. GILMAN & COMPANY,
Dept. "L",
211 McGill Street,
9-T.f. Montreal.

For Sale

Several tons of sawdust grates 5' x 10".
1 slide valve engine 14" x 18" cylinder.
1 Leonard high speed centre crank engine 14" x 14" cylinder.
1 Laurie engine 8 x 9 cylinder centre crank.
1 42" Berlin 3 drum sander practically good as new. Write for stock list of first-class used belting, pulleys, shafting, pillow blcoks, etc.
9 W. H. COOK, Orillia, Ontario.

For Sale En-Bloc

Complete Saw Mill Equipment, including one four Block Hamilton Carriage. One pair heavy twin engines feed complete and steam nigger. One three block E. Long carriage with eight inch gunshot feed and steam nigger. One heavy three saw edger, W. Hamilton make. Three 75 H.P. boilers complete with Dutch ovens and stacks. One 90 H.P. engine and fly-wheel complete. One lath and shingle mill. Complete filing equipment. One refuse burner, shafting pulleys, transmission, etc., complete. Apply Box 543, Canada Lumberman, Toronto. 7-12

FOR SALE—Guaranteed rebuilt filing room machinery. Send for monthly mailing list. Ge Bott Mfg. Company, Big Rapids, Mich. 6-9.

Machinery For Sale

TWO KEG STAVE MACHINES
Complete with Jointers, Crozer, Clutches, etc.

Apply to G. M. Strong, 403 McGill Building, Montreal. 9

One 12 x 12 centre crank engine, 60 h.p.; one centre crank engine with sub-base, 75 h.p.; one centre crank engine, 30 h.p.; one side crank engine, left hand, 20 h.p.; one 27 h.p. portable engine on wheels, also new portables on wheels or skids 24 to 60 h.p. The Robt. Bell Engine & Thresher Co., Ltd., Seaforth, Ont. 6-11.

For Sale

400 H.P. Polson Compound Corliss.
200 H.P. Murray Simple Corliss.
16" x 24" Frost Slide Valve.
American 30" x 16" Sizer.
48", 54" and 66" Vertical Resaws.
5' and 6' Horizontal Resaws.
No. 140 Fay Egan Double Surfacer.
Several high speed Matchers, etc.
Box 564, Canada Lumberman, Toronto.
9-E.o.1-T.f.

Machinery For Sale

Wickes gangs, 26" x 12", 40" x 14", 46" x 18"; Moreau pulpwood barking machine. 7' Garland band resaw.

MILES MACHINERY CO.,
9-10 Saginaw, Mich.

For Sale

400 H.P. Cross compound engine.
200 H.P. Simple Corliss.
150 H.P. Frost slide valve.
Horizontal band resaw.
Vertical band resaw.
High speed matcher.
Heavy double surfacer.
Berlin triple drum sander.
Many other machines.
Box 563, Canada Lumberman, Toronto.
E.O.I.-9-15

Good Values

"SUBJECT TO PRIOR SALE"

Tug Wanted

Wanted to purchase a small steam warping tug, commonly called "Alligator." Send full particulars, stating price, to U. O. I. Co., 194 Middle St., Ottawa, Ont. 7-8

How to Prevent Wood Shrinking or Swelling

To keep wooden articles from shrinking and swelling when in use, nothing practical has as yet been devised, but a proper application of the following principles, worked out by the U. S. Forest Products Laboratory, Madison, will go a long way in reducing this trouble to a minimum :

1. Have the wood at a uniform and proper moisture content before it is put through the woodworking machines. If the wood is too wet, it will shrink; and if it is too dry, it will swell. The responce to changes in atmospheric humidity is more rapid when the wood is cut in smaller pieces.

2. Use quarter-sawed lumber if shrinkage across the face of the articles is likely to be serious.

3. If a minimum of change in dimensions is highly essential, use a wood as light as will stand up under the circumstances.

4. Use cross-banded material—that is, veneers glued together with the grain of each layer at right angles to that of the adjacent layer.

5. Under certain conditions it may be practicable to use wood temperatures. This reduces the that has been subjected to high capacity of wood to absorb moisture.

6. Several coats of oil, paint, shellac, varnish, or enamel, or impregnations with linseed oil or paraffin will more or less reduce the change in volume of the wood when it is subjected to variations in humidity for limited periods of time.

7. Insofar as practicable, protect the wood against extremes of atmospheric humidity during and after manufacture. This may be done in the shop and storage room by installing suitable humidity control apparatus in connection with the ventilating system.

Forest Experimental Station

The Dominion Government established about four years ago under the Forestry Branch of the Department of the Interior, a forest experimental station at Petawawa, Ontario. This is on a part of the military reservation that is not required at the present time for military purposes. The tract is admirably situated for the purpose as it is in a territory from which the timber has been cut in the past fifty or sixty years, and the new forest is coming on in various stages of growth and different kinds of trees. The tract resembles so much of the cut-over lands in Ontario and Quebec that the results of the experiments made in it will be applicable over a great extent of Eastern Canada. The experiments cover too wide a range to be gone into in a brief note, but, in a word, the result will be to show how quickly forests of different kinds of trees grow, and how best to handle a cut-over or burned-over forest area in order to get a crop of pine, spruce, or birch, or any other desired tree ready for the saw. Already valuable information has been secured and this will be increased as each year goes by and the effects of the different methods of treatment become visible.

Tests on Floor Panels and Columns

In connection with the Third American Lumber Congress, a water test will be conducted at the Underwriters' Laboratories, Chicago, on a joisted floor panel covered with metal lath and cement plaster. The fire resistance test on the panels has already been held, and although no ofcial report has been issued as to its results, it is considered to have been a satisfactory test. Reports on this series of tests will be issued in the near future.

Another report which will be out in a short time is that covering the series of six fire tests on timber columns in which a reinforced concrete cap specially designed for the National Lumber Manufacturers' Association was used. A patent on this cap has been applied for, to be taken out in the name of the Association and assigned to the public.

Dirigible Balloons for Forest Fire Fighting

In a recent clipping from a San Francisco despatch, millions of dollars worth of valuable timber has been saved by the Government during the season just closed, by the use of airplanes in forest fire fighting. Due to the accurate plotting by wireless from the planes, the fire fighters can be directed to within a quarter of a mile of the exact location of the fires.

The Government is planning on extensive improvement of the airplane patrol service for next season. It proposes to employ navy dirigible balloons for transporting fire fighters from the fire control stations to the fire. Men with all equipment will be loaded into the dirigible, taken directly to the scene and dropped by means of a long rope ladder.

The motion is not only saving millions of dollars each year from fire loss, but is training scores of army fliers for future emergency.

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

Review of Current Trade Conditions

Ontario and the East

During the past two weeks there has been little change in the general situation so far as the demand for lumber is concerned. The market is still a buyer's market and trade is spasmodic. It is reported that manufacturers of white pine are holding this year's cut at nearly as high a price as last year and so far have shown little or no disposition to come down in their figures. Few, if any, large stocks have as yet been purchased by wholesalers, who are sitting back awaiting developments. The building situation is looming up quite promisingly in the cities but in the smaller towns and country little is doing as yet beyond some repair work and renovations. The feeling, however, seems to be brightening and it is felt that from this out the tendency will be upward.

In this issue, the Canada Lumberman presents interviews with a number of representative lumber dealers in Ontario and the East and a perusal of their views will shed some light upon the situation generally. Summed up in a few words, it may be stated that stocks with the most of them are low and business has been rather slow up to the present but is picking up in certain centres. On the whole, however, the outlook is fair. Until after the 1st of May when the attitude of labor will probably be definitely known and some large projects now under way assume shape, there will not be any radical change in the situation.

Since the reduction in freight rates, western stock is moving a little more freely but there is still strong competition from southern pine, which is arriving in fairly large quantities. The hemlock market is pretty well shot, while there has been a recent drop in the price of spruce and red pine. White pine is holding its own firmly and those who have stocks are convinced that values will not recede.

Sawmills are resuming operations in various parts of Ontario, Quebec and the Maritime Provinces. The majority of plants expect to get under way during the first week in May. Some have already started.

A reduction in wages of unskilled labor has been put into effect at numerous points and there is little objection on the part of the men so far as Ontario is concerned. New Brunswick press despatches convey the information that several strikes have taken place, the help refusing to accept the ten hour a day instead of the nine. They are not objecting so much to a decrease in pay of from ten to fifteen per cent. It appears that the strongest fight has been around the re-establishment of the ten hour a day.

In hardwood lumber there is not a great deal of stock moving. Most of the factories which are running announce that they have enough material on hand yet to last them from a fortnight to six weeks, and will not be in the market until this is used up. Many industrial establishments are operating only to part capacity and, naturally, buying is on a very conservative scale.

Just after the April 15th edition of the "Canada Lumberman" had gone to press, word was received that another decrease in western freight rates had gone into effect, making the rate from Vancouver to various points in Ontario 90c. per hundred pounds. There is no reduction in the carrying charge on shingles, which still remain at $1.10½, the former charge being $1.14.

The lower rate of 90c. on lumber is the half-way point between the figure which prevailed last spring and the one which went into effect last fall when carrying charges were jumped 40%. The rate in the spring was 77c. and this was augmented later by 26.5.

The mountain mills of British Columbia have secured a rate of 81c. per hundred pounds from that district to points in Ontario. The former figure was 94½c. The reduction is the same as that which has been granted the plants on the Coast.

The shipments of lumber from the west fell off so much during the past season that the railways began to feel they had rather killed the goose that laid the golden egg. Business in the lumber line, which had been fairly active up to the time of the 40% advance, suddenly went flat and has remained decidedly quiet.

Mills and shippers, wholesalers and consumers, in fact everybody, joined in an agitation for a lessening of the levy. The "Canada Lumberman" voiced the general expression of opinion, particularly the western trade, when on March 1st it published an article which aroused considerable comment, under the caption "Are Railways Killing the Lumber Business." It was then stated that Canadian roads on their augmented charges had been losing money, for not one-third of the lumber had been coming out of the Pacific Coast province that there was prior to the apex of carrying charges going into effect in September 1920. Up to that time about 60% of the shipments of loaded cars from British Columbia to the east consisted of forest products.

The railways have, at last, come to a partial realization of what is meant by over-stepping the mark. The present reduction of 13½c per C. is welcome in that it is a move in the right direction and will enable B.C. fir to be sold in the East in competition with southern pine and Michigan, Wisconsin and Ontario hemlock. Heretofore, southern pine had a great advantage in that the freight rate was only 53c. per houndred, while, as stated, the charges on material shipped from the Coast was $1.03.5.

The belated reduction in rates has already had an appreciable effect with western mills; in fact, a spirit of optimism now prevails among eastern representatives of Coast concerns. The outcome should be greater confidence in the present market situation, more stability in prices and a tendency toward equalization of production, sale and distribution. While the concession granted is not as generous as was hoped for, it is at least a move in the right direction and the 90c. freight tariff on Coast forest products is much more desirable than one of $1.03½.

It is estimated that on the guaranteed weights, the savings to the eastern buyers of B.C. stock will be as follows:—Dressed timbers $4.00 per M; rough timbers $4.25 per M; flooring and V joint $2.75 per M; boards and shiplap $3.25 per M; ⅝ V joint $1.75 per M; dimension (eastern standard) $3.75 per M; dimension (Coast standard) $3.25 per M; casing and base $2.50 per M; cedar, bevel siding $1.00 per M.

There are plenty of cars available and both the lumber trade and the railway interests are hoping that many idle ones which have been at various sidings and divisional points, will be brought into service. Generally speaking a carload of material can now be brought from the coast in three weeks or even less time, and satisfactory service may be rendered.

In regard to Canadian freight rates in general they will be revised downwards when the present rates become ineffective on July 1st next year, according to a public statement made recently before the Canadian Club of Calgary by Hon. F. B. Carvell, chairman of the Dominion Railway Board, that is if he still retains that position.

This pledge took on greater significance when coupled with Mr. Carvell's summing up of the situation in the statement that first must come a rearrangement of working conditions of railway employees; reduction in service, and reductions in the price of coal.

Mr. Carvell told the club some of the reasons for his discussion on such matters in public. Exception had been taken by some people to his doing so, but he felt it a matter of great public interest, it was just before such bodies as the Canadian Club that full and free explanations should be made. Mr. Carvell briefly reviewed conditions when he became a member of the board. He dealt with the McAdoo award, its adoption by the Canadian Government, and the subsequent Chicago award. It took $22,000,000 for the Canadian railways to pay the retroactive part of the Chicago award, he said. The payroll for the Canadian National Railway prior to the McAdoo award was $43,265,000. It was estimated the payroll for the present year would be $81,347,000. The Canadian Pacific payroll prior to the award was $56,190,000. The estimate for this year was $100,000,000.

United States

Business has not changed materially in the lumber line within the past two weeks except that a few more orders have been placed and confidence is gradually returning. Prices are firmer in some woods and several inquiries which have been made from time to time, have been converted into orders. Building strikes are still on in a number of centres and this has caused structual operations to be held up.

One authority states that in spite of all the handicaps of high transportation charges, high rate of wages for labor and abnormal interest charges, the lumber business is gradually improving in volume and this is bringing with it a slow advance in the level of mill prices. As stocks get lower, yardmen are being absolutely forced to place occasional orders because they have permitted their goods to run down to such a low point that they are not able to fill bills which are sold. Mixed carload lots, containing numerous items of stock are the rule.

As stated, the unsettled wage question is still deterrent to pronounced building activity in the larger cities. There is a vast amount

of estimating going on that indicates a huge volume of business being held in check, principally owing to the refusal of labor to accept any reduction. Money is somewhat easier and lower interest charges are anticipated.

There is very little change noticed in the hardwood situation and industrials are still adopting a decidedly conservative policy. Some factories that have started running again are buying only for their immediate needs. Manufacturers of oak flooring and millwork plants have been speeding up their production somewhat in response to a demand for their products that is stimulated by some general increase in structural operations.

Then, automobile concerns are also taking aboard larger quantities of hardwood than they have for some time, but furniture manufacturers are buying little as yet in advance of current needs. However, greater interest is being shown in the future.

Prices have not changed either in northern or southern hard woods, though the sagging tendency is still in evidence, especially in common grades. In yellow pine the condition remains unchanged. The upper grades have declined slightly in price with commons tending to steadiness. There is a belief that on the whole business will continue to show some improvement in yellow pine.

Hemlock orders are disappointing as a much heavier increase was expected for spring business. Many of the sales are made in competition with other goods and at prices somewhat under the current quotations.

Considerable strength has developed in the Douglas fir market during the last two weeks, due more to the broken condition of stocks than to increase of demand. The volume of orders is showing a steady increase as spring advances but is still very far from normal. Mill stocks in the meanwhile have become badly depleted and assortments broken, and it is difficult to place orders today for badly mixed cars. Finish, drop siding and dimension are in particularly low supply and are selling at an advance of about $2. Recently the market on dimension was about $8 off Rail B list; today $6 off is the customary price, with the chances to get it at $7 very few, and some mills are refusing to sell dimension at a greater discount than $2 off.

Speaking of the general situation, a leading paper gives the following comprehensive summary:—Encouraging reports from many sections of the country tells of an increase in building activity, especially the building of homes and further encouragement is lent to the building movement by the recent action of some building material manufacturers in lowering prices. This action, taken long after similar action on the part of luumbermen, tardy as it is, is commendable. Money also is becoming more plentiful for building.

Today the return of building to normal volume probably is delayed more by the attitude of union building labor than by any other one thing. In many places building labor scales came up for readjustment April 1, in others they will come up for revision May 1. So far, in too many cases, union building labor—or the leaders at least—stridently refuse to consider anything but peak wages. Labor represents a very large percentage of the cost of any home, and wages can no more hope to escape readjustment than the prices of the materials which enter into the physical structure.

The people need homes, labor needs work, manufacturers need business, the welfare of all interests is therefore bound up in no small degree in increasing building. This year there should be no long drawn out wrangles, no useless strikes. Differences should be sanely and quickly settled with due justice meted out to all. If this is done building will soon assume normal conditions and everybody will be benefited. Lumbermen especially should work and work hard to prevent tieups due to strikes.

Great Britain

The echo of the recent labor trouble is not yet over and business has been very slack in consequence of the disturbance and uncertain outlook. Just when a revival will set in it is not possible to state. Everything is now at a standstill and until a more settled feeling prevails, there is not likely to be any marked change either in demand or prices.

Many housing schemes are still in abeyance and one correspondent says:—"If we are to wait until the Government takes the initiative, then the prospects of trade increasing in this direction are not particularly bright. The whole question of a revival in business appears to hang largely on the problem as to when the market will reach the bottom in regard to prices. It is hardly likely that anybody is going to speculate if the existing uncertainty in values continues."

There is a feeling in other circles that as the labor agitation has spent itself to a certain extent, the public mind will soon witness a turn in the industrial tide. For some time trade has been in the trough of the tide and that of itself is a guarantee that conditions will rise again. Just when that time will arrive, no one cares to predict.

In a general review of business "The Timber Trades Journal" says:—The course of trade since the war has taught one very important lesson—to give up the pre-conceived ideas and not to be astonished at anything. If, a year ago, anyone had hinted that many dimensions in sawn goods would have been almost halved in value in the spring of 1921, he would have been looked upon as a scaremonger; and if, further, he had suggested that the 1921 market would not have opened by Easter, not much would have been thought of his judgment or phrophetic powers. So extraordinary, indeed, has been the sequence of events that the trade is now prepared for anything, and this is just the reason why all are waiting. At one time, there seemed no limit to the height to which prices might rise, and now there scarcely seems a limit in the other direction.

In regard to the freight situation, it is stated that the tendency continues downwards and more tonnage is being laid up. There is little doubt that shipowners are now beginning to realize that in future much lower rates of freight will have to be accepted for wood cargoes.

Speaking of the situation in hardwoods, the "Timber News" says: For several weeks hardwood trading has been under a cloud, and a change of atmosphere would be exceedingly welcome. The slow demand is the most difficult and most significant factor in the trade problem. A change in the direction of greater activity would have a heartening effect all round. A tonic of that kind is what the market most needs, but whether it will be administered or not in the immediate future remains to be seen. The timber trade has of necessity to move with the general trade of the country, and the latter is as yet merely struggling to get on its feet. Recovery is also retarded by the peculiar financial situation that has developed. A high bank rate and limitation of borrowing facilities which were instituted to check speculation, and have fulfilled the object intended, have had effect also of hitting and badly handicapping the ordinary trades. This was foreseen at the beginning, but it was absolutely essential to place a check on the speculators' activities, despite the evil involved. The financial stringency is the reason for much of the forced selling, and the lack of confidence that has been so freely expressed of late. Money is exceedingly tight, as traders dealing with the consumers find especially. This makes the situation doubly difficult. It appears improbable that speculation would revive if the bank rate were reduced and more generous facilities granted by the banks, and it is certain that action of this sort is needed to assist the trade of the country.

Market Correspondence

St. John Looks for Improvement in Early Fall

The condition of the market in St. John shows no improvement at the present time and no one can say it is any worse to-day than it has been for the past thirty days. The price of lumber is governed by economic laws and its history is the story of the lumber industry at St. John to-day. There is no demand either in England, Canada or United States. Steamers are going away from St. John carrying no lumber cargo and very few cars are moving out to the American market from over the territory surrounding St. John.

About three weeks ago there seemed to be considerable demand from the New England market for Random spruce, but this ceased a week ago and orders are scarce. What orders are being received are being taken at about $38.00 Boston, which is leaving about $28.00 to $30.00 on cars St. John, rate of 27½c. This does not leave anything but a tremendous loss for the manufacturer on the old stocks which were purchased by the brokers at from $42.00 to $46.00 net. It will also produce nothing but a loss to the manufacturer at the present time, as the logs are costing in the vicinity of $25.00 at St. John mills. When the manufacturing is added it shows nothing but a dead loss for any random that may be shipped on the Boston market at this price.

English deals are without any demand and the last consignment shipped from this port is said to have net over $25.00 along side ship. This was some ten days ago, since which time some inquiries are coming from the other side and it is largely for 3 x 7 and 3 x 8, which are reported to have been offered at about $30.00 along side ship St. John. These prices have simply been forced sales and the people, who shipped them, have done so trying to liquidate a certain amount of their deals and turning them into cash if possible. The banks all over the country, while they have been dealing very fairly with the merchants, feel it is wise for the latter to try and unload some of the stocks and pay back the advances made by the banks as promptly as possible. This is causing a tremendous loss to the manufacturers and brokers but the system of liquidation must go on before trade will get back to proper conditions. It is a great deal like cleaning the water out of stocks and getting things down on a real solid basis. This liquidation cannot go on much longer at these prices un-

less the cost of production is brought down away below its present cost.

Everyone at St. John is making a large bid for all local business and price cutting is very prevalent. Local stocks are heavy and are being offered at an average of about $35.00 for real good specifications for house building trade. Spruce boards are being sold in the rough at from $30.00 to $32.00 for a good city cut board, while rotary or portable mill sawn stock is being offered for less money. It, of course, is an inferior article containing a considerable amount of wané, poorly manufactured and is not to be compared with stocks turned out at the larger mills on tide-water, where it is well graded, well manufactured and well taken care of.

An analysis of the trade at the present time shows the manufacturers at St. John to be in a good solid position and they feel that they can weather the storm without any financial upheaval. They, of course, realize that they must get down to a new basis of price and to get there, they must have a lower scale of wages for production during the coming summer. At the present time the mills have not started and it is not known whether they will or not but, should the men agree to take the same rate of wages as paid in 1919, a limited amount of manufacturing will be done. While this will not leave any profit at the present prices on this new scale of wages, should there be any sale for lumber, it will give the manufacturers an opportunity to turn their logs into cash and liquidate their debts as promptly as possible.

The strike of carpenters in New England has been very detrimental to the trade at St. John as it has caused stagnation in a number of orders for house building material from Boston and vicinity. Just when this strike will be ended and the real union men go back to work, is indefinite at present. It is felt that the men cannot hold out much longer and if they at all study conditions world wide, they will be brought face to face with the fact that they are wrong and will realize that the only way to improve trade is to start the building of the houses and other buildings much needed both in and around Boston.

The stocks held by the several European Governments have been offered for sale to a limited amount at very low prices. It is said that a certain amount of Government stocks in Nova Scotia were sold at about $20.00 at the point of shipment. These stocks, of course, are very inferior, some of them having been piled for, at least, three years. They are stained and rotted to a large extent and do not compare in any way with last year's manufacture and in no way with the stocks to be manufactured during the coming year of 1921.

Practically no portable mill work is being carried on throughout this section of the province and only a limited amount of logs have been taken out for the coming season's sawing.

Stocks of low grade, such as culls, are being offered for $20.00 to $25.00. Of course, a good deal of the culls has been poorly taken care of and unless they are stuck up are not fit to market.

The outlook, while not encouraging, is in no way different from other trades. Until a sound basis of re-production in the cost of labor has been reached and certain economics put into effect, the lumber business cannot expect to stand in a much different position from other trades but one good sign about the lumber business is, that there are a large number of buildings needed in Canada, United States and England and the work of re-building in the European countries as well as at home must be carried on in the immediate future. It matters not what the price may be. If an outlet can be found for the material and the demand increases, there certainly will be a steady influence on the lumber trade and by fall of 1921, it should find itself in a much better position than to-day. It will, no doubt, take the next six months to liquidate and get down to a new base price.

Laths in this section of the country have been all cleaned up and there will be no more to market until there have been some new ones produced. Should the mills not start operation, laths will be very scarce in this immediate section, although it is understood there are considerable stocks on the North Shore of New Brunswick.

Stocks of pine 1 in., 2 in. and 3 in. are light and should a revival in the manufacturing trades throughout New England take place in the near future, it is felt that the price of pine will be steady and sales made at profitable figures.

So far the driving of logs on the St. John River has not been a success and all logs are hung up in the streams. Should weather conditions not improve the logs will not come out for manufacturing this year. It is just possible that this condition of affairs will improve and should there come any shortage at all, the price of lumber will certainly improve.

There are several small sawmills in Costa Rica and some frame building by the well-to-do. Nicaragua has a valuable pine belt on the coast and a great variety of hardwoods, including mahogany, cedar and rosewood.

Halifax Business is Now Showing Some Life

The prediction of those who foretold that trade would pick up in April and May, and show a gradual improvement during the summer months and that normal conditions based on a lower cost level might be expected about the end of the present year or the beginning of next, appears to be well founded at least, insofar as the first part of the opinion is concerned, says our Halifax, N.S., correspondent.

Since the beginning of the year, the dullness in the local and American markets which is characteristic of this season of the year, has been much more pronounced than in other recent years. This in conjunction, with the scarcity and tightness of money has had the effect of seriously curtailing the output of lumber in this Province. Since the beginning of April sales have been more numerous, and considerable shipping to the United States, both by rail and water is now under way, while purchases are only being made for stock to go into immediate consumption.

Owing to the cautious policy adopted by the American buyer, prices have shown no tendency to rise above the present low figure. A satisfactory settlement of the strike now on among the building trades in the New England States, would, in all probability, have the effect of stimulating business, which owing to the reduced stocks carried by the yards would be quickly reflected in a greater demand by the manufacturers.

It was hoped that prompt action would have been taken by the Railway Commission to relieve the shipper of the serious burden imposed by the present railway tariff, when it was seen that the excessive rates charged by the railways, instead of increasing the revenue of the roads as was intended, had the opposite effect, and became a prime factor in the depression of trade. On account of the bulk of the product, no industry suffered from this cause to a greater extent than the lumber business, and no branch of the industry more than that in Nova Scotia, owing to its unfavorable situation from a railway point of view and the lower grades of lumber produced in this Province. By far the greatest item in the total cost of lumber laid down in almost any market is the cost of transportation, and until the freight charges are modified, in keeping with the lower levels of values, shipments of any great volume cannot be resumed.

The British market has not yet shown any indications of revival. The steamship companies operating steamers out of Halifax have reduced their sailings almost to the vanishing point, and the Canadian Government merchant marine have not yet arranged for any sailings from the port of Halifax for the coming season. Large stocks of spruce are reported in the principal British ports such as Liverpool and Manchester, and the resumption of transatlantic business will depend on how soon these stocks are used up. Ocean freight rates have been greatly reduced. Charters are reported fixed from St. John at well below the 100s mark, for tramp steamers.

A transaction of considerable interest to local merchants was the recent sale of about 20,000 M. feet of the old Government stocks stored at Halifax and other points in Nova Scotia to M. Henri Peladeau of Montreal. The removal of this lumber from the market is expected to have a salutary effect on the trade, as so long as the British Government controlled this stock there was no certainty as to its final disposition. M. Peladeau has already started shipping this lumber to Montreal by rail and vessel.

It is also reported that another Montreal firm has bought a block of the old French stock at St. John, and as the Government is shiping from their stocks stored at that point, it is hoped that before a great while all this old Government stock will be disposed of.

The demand on the Halifax market, particularly in the city is fair. Stocks on hand are sufficient to provide for most immediate requirements while the yards show little interest in new offerings except at very favorable prices. A number of large contracts in Halifax have been let recently, and construction started. Plans are being prepared for a number of others, and as building costs are now considered to be down to bed-rock, a fair volume of business is expected as the season advances.

Montreal Trade Evidences Signs of Animation

At last there are signs of improvement in the Montreal lumber market. As yet the better feeling, as the result of increased orders, is not pronounced, but there are hopes that the industry is nearing the end of a long period of dullness and falling prices. That termination will be a relief to all sections of the trade, who too frequently had to incur losses on sales. Even when losses have not been made, prices have been such as to preclude any profit. The market has been, in fact, more or less demoralized, this condition being the more accentuated by the reason of the sharp contrast with previous good times. In the desire to secure whatever business was available competition has been very keen, with the result that prices showed marked variations. This cutting of prices and the stiff competition have not been

confined to lumber, but have extended to such commodities as hardwood flooring.

It may be pointed out that some wholesalers are of the opinion that notwithstanding a large volume of business, prices have not yet touched bottom, and that the stocks offering are such as to more than counter-balance any effect which might result from increased buying.

The causes for the lack of demand, which characterized the market for months, are to be found in the slowing up of general business. Naturally orders for construction are comparatively small during the winter, but usually large cmpanies such as railways, car builders, piano factories, etc., buy a fair amount of lumber during the winter period. This support has been lacking, as large industrial concerns have worked, and are working, on short time. Construction did not open up as anticipated, and the expected revival in lumber did not materialize. Local building prospects are, however, now brighter. A considerable amount of work is contemplated, and architects have prepared a large number of plans which are awaiting the sanction of proprietors for tenders to be called. Many have yet to be convinced that prices are stabilized and this has retarded construction. It may be that there will be a further slight reduction in the values of building material, but the chances are that quotations will remain steady. The cost of building will be slightly enhanced owing to a decision of the Tramways Company not to carry freight. A large volume of material has been carried at a low cost, and the decision means that a more expensive form of haulage must be employed. So far labor has given no pronounced indication of resisting the lower schedule of wages adopted by contractors.

Lumber Industry Needs No Protection

A recent despatch from Washington, D.C., says: Wages paid common labor in the lumber industry in Canada are slightly higher than in the United States, according to a letter sent to some of the members of the House Ways and Means Committee to-day by Donald D. Conn of the Shevlin, Carpenter & Clarke Company of Minneapolis. Mr. Conn was a witness before the Ways and Means Committee several weeks ago in opposition to the imposition of any duty on lumber, contending that the lumber industry in this country needs no protection. His company has lumber both in the United States and in Canada.

National Hardwood Meets in Philadelphia

Among the Canadian firms who have recently joined the National Hardwood Lumber Association is J. A. McDonald of Emsdale, Ont. The twenty-fourth annual convention of the association will be held in Philadelphia on June 9th and 10th at the Bellevue-Stratford Hotel.

A recent meeting took place of the Inspection Rules Committee and the associated wood-using industries were invited to send representatives for the purpose of conferring on points of mutual interest pertaining to national inspection rules. There is every indication that the result of the conference held was satisfactory to all concerned.

The committee formulated its recommendations covering proposed changes and additions to national rules and these will be brought before the June convention for final action thereon.

H. L. Hebard, deputy national inspector of the New York City market and district, has resigned and J. A. Wiesing of Jersey City has been appointed his successor. Mr. Hebard was formerly inspector for the Toronto district and is well known in Ontario. He has taken a position as representative in the eastern states of a large wholesale lumber firm of Cincinnati, Ohio.

Lumber Outlook in Miramichi District

An important meeting of the mill workers and longshoremen of the Miramichi District was held recently in Chatham, N.B. Among the speakers was John W. Varley, of Toronto, general organizer of the American Federation of Labor. He contended that there was an organized effort on the part of capital to drive labor back to the economic servitude of pre-war days. Workers had been blamed for falling down and keeping down production when as a matter of fact there was an overproduction with an eight or nine-hour day in force, and yet employers wanted a ten-hour day and more production. He urged all laboring men, organized or unorganized, to stand together in the battle against the ten-hour day.

W. B. Snowball, speaking for the lumbermen, said he could not sell his deals at any price. He had been in Montreal, Toronto and New York and had cabled England but it was no use. The market was glutted. The log cut during the past winter had been much smaller than usual. The company's wharfs and piling ground were filled with lumber and there was no room for more. He added that his company had sustained a loss during the past season. After explaining conditions locally and taking into consideration that men who had worked for him all their lives, looked to him for employment, he had succeeded in making arrangements whereby he would operate the smaller mills of the company as far as possible this season. He spoke of the conditions in the lumber industry in Nova Scotia, British Columbia and many parts of Ontario where a ten-hour day was still the rule. The price of lumber was down but the cost of logs was not. Mr. Snowball did not expect returns from money spent in operations this season and said if a nine or ten-hour day was general all over Canada, he would be in perfect accord with it. As it was now, he wanted an even chance. In conclusion, Mr. Snowball said that he could compete with the best of his competitors under equal conditions.

Canadians Attend Woodlands Meeting

The Woodlands Section of the American Pulp & Paper Association was permanently organized recently in New York. It was decided to adopt as the programme for the coming year a co-operative study of the growth and yield of pulpwood through reforestation both by artificial planting and natural reproduction, with a view to determining exactly to what extent the practice of forestry by paper mill companies on their pulpwood limits can be made profitably.

Two prominent Canadians were present at the gathering and took part in the discussions—Ellwood Wilson, forester of the Laurentide Co., Grand Mere, Que., and Edward F. McCarthy, who has just completed elaborate studies of the region north of Lake Superior for the Commission of Conservation, Ottawa. Mr. Wilson discussed the tractor, sinkage and slash disposal problem, while Mr. McCarthy went very extensively into the matter of getting rid of the debris of the forest.

New Logging Camp Will Have Pool Room

The Abernethy-Lougheed Logging Co., Limited, of Port Haney, B.C., have commenced operations and are logging from the Miami Corporation timber limit which they have secured. Starting from the Fraser River, near Kanaka Creek, where one of the latest log dumping schemes have been constructed, the broad gauge railway cuts across Maple Ridge municipality and crosses the Lillooet River at the old John Stewart homestead, at which point the company intends to locate a permanent and up-to-date camp. This camp will include all modern conveniences, including a reading room, pool room and a baseball diamond. The company has decided to go to considerable expense in view of the permanent nature of the work on Limit "W," forty acres of land having been purchased as a site.

A leading feature of the operations of the Abernethy-Lougheed company will be the big asset to the mills on the Fraser River during the annual freshet. Much embarrassment has from time to time been caused the mills during the summer time by reason of the freshet practically prohibiting the towing up of logs. To secure an ample supply of logs it has been necessary in the winter and low water periods to accumulate enough to carry them through the freshet season, when they cannot tow from the gulf. The present company and other loggers on the river have for years been able to carry the mills over when shortages have occurred. The additional output from Haney will further supplement what is already put in on the river, and will greatly relieve the millmen from New Westminster to Port Haney from anxiety during this period.

Profits of Int. Paper Covering Five Years

International Paper Co., Boston, in the past five calendar years earned a total of $33,911,946. This figure is after all charges and taxes. Regular dividends on the $25,000,000 6% preferred take $1,500,000 a year, or $7,500,000 for the 5-year period. For the $19,850,264 common stock, therefore, the company has earned $26,411,946, or $133 a share, as compared with present selling price of about 61.

As a matter of fact, International Paper has not showed earnings equal to $133 a share on the common back into the property in five years. In 1917, the accrued dividends on the preferred, reflecting a number of lean years, were paid off to the amount of $7,506,244. The actual total of preferred dividends consequently was $14,251,57r for the five years, leaving a surplus of reinvestment in the business totalling $19,760,367, or $98 per share of common.

International Paper produced about 300,000 tons of newsprint last year and 232,000 tons of high class papers. The newsprint output was some 5,700 tons under that of 1919, but in the better grades there was a gain of 65,700 tons in out-turn. The most striking feature of operations, however, was the increase in profit per ton. In 1920, on a production of 532,000 tons of paper of all grades, the company earned a net profit of $22.24 per ton, as against $9.15 a ton in 1919 and $10.90 per ton in the year before that.

During 1920 the company cut down its notes payable from $8,500,000 to $306,687, practically extinguishing that item. This was accomplished by no new financing; in fact, there was a net reduction in capital liabilities of $467,588. Net working capital on Dec. 31 last stood at $26,590,000, but since the turn of the year the balance sheet position has deteriorated. Mills of the company are running at only 50 per cent. of capacity and heavy borrowings from the banks have had to be made against accumulating inventories.

The Wide Variety of Jeffrey Chains For Saw Mill Use

Is illustrated in these sections of Jeffery Conveyers for service in handling

Logs from river and storage to mill saws.

Ties from stream to mill or railroad cars.

Refuse, Saw Dust, Slabs, Blocks, etc., from mill to fire pit.

Lumber from mill to yard or kiln.

Pulp Wood, Chips, etc., in Pulp and Paper Mills.

Ashes, Coal, Packages, etc.

Jeffrey Wire Cable Conveyers are especially adapted to Long Distance Haulage and the handling of large capacities of Mill Refuse and Saw Dust, Pulp Wood, etc.

Write for Special Bulletins and let us figure on your conveying requirements.

MATERIAL HANDLING MACHINERY

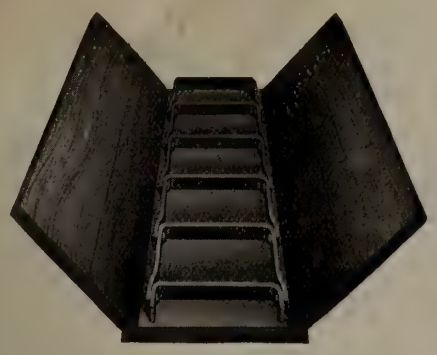

Fig. 1—Sawdust and short refuse Conveyer made from a plain (Style A) Steel Drag, sliding upon a steel plate.

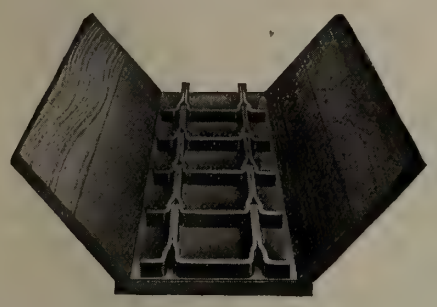

Fig. 2—A wider and more durable type of the Steel Drag Chain (Style D) than Fig. 1.

Fig. 3—A malleable Drg Refuse Chain mounted upon a steel plate. This chain is especially fitted for service in gritty material on account of long internal wearing surface of pin.

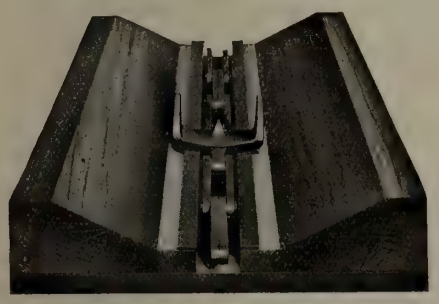

Fig. 4—Cast Steel Log Haul-up Spur, mounted upon a Vulcan Steel Chain and sliding on flat steel strips.

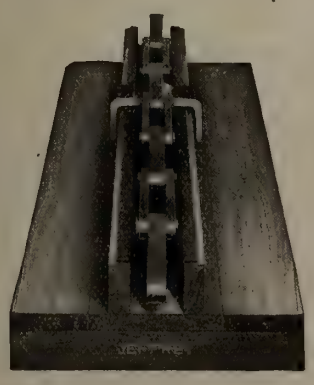

Fig. 5—Return strand of the above Log Haul-up (Fig. 4) showing the spur inverted and running astride of longitudinal guides.

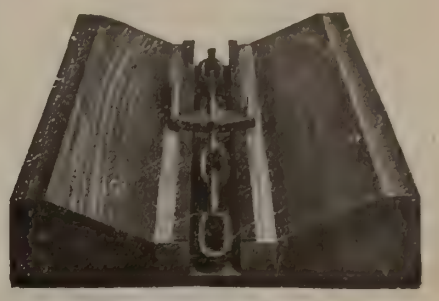

Fig. 6—Cast Steel Log Haul-up Spur upon a long link welded steel chain and operating on steel strips.

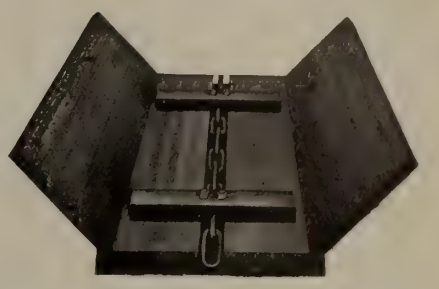

Fig. 7—A cheap and effective Pulp Wood and Refuse Conveyer made from Jeffrey Long Link Coil Chains with U-bolts and Wood Cross-bars at intervals.

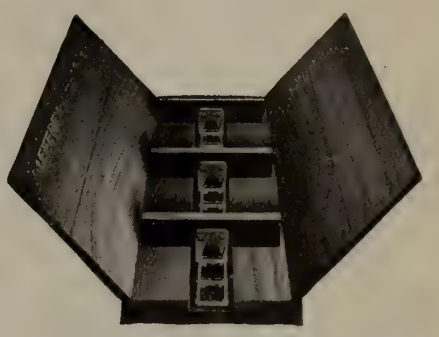

Fig. 8—A lighter service Conveyer than Fig. 7, made from Detachable Chain with F-2 attachments or any other type of Malleable Chain with similar attachments.

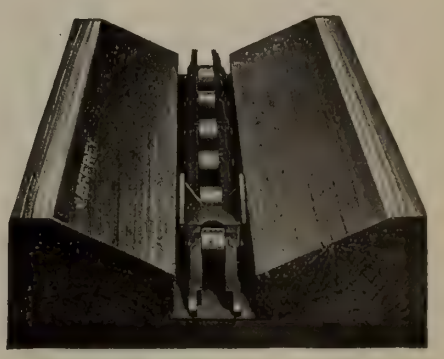

Fig. 9—Log Haul-up made from an extra strong malleable roller chain having steel pins and with renewable spurs riveted to top of the chain.

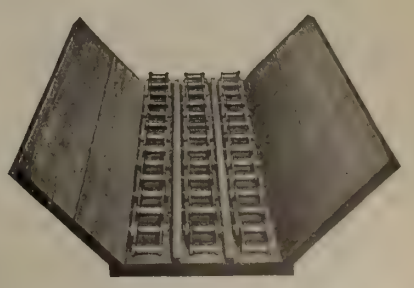

Fig. 10—A series of plain chains in a wide trough makes an excellent conveyer for handling logs from saws to stackers or barkers.

Mr. Mackin Did Not Criticize Others

Under the captions "Sense of Humor Claimed by Canadian Lumbermen" and "Conduct of Lumber Industry in the United States Designated as Funny," the April 8th issue of the "Mississippi Valley Lumberman," Minneapolis, Min., says:

"That the attitude of lumbermen of the United States in the present situation is a joke and a source of amusement to their Canadian brethren is the opinion expressed during his Minneapolis visit this week, by H. J. Mackin, general sales manager and assistant manager of the Canadian Western Lumber Company, Ltd., of Fraser Mills, British Columbia.

"Now, it may be that Mr. Mackin and his Canadian associates have a peculiar sense of humor. Be that as it may, Mr. Mackin offered some degree of evidence to support his statement.

"According to him, the proper course in this country under the rather stressful conditions that have obtained in the lumber and other industries for an uncomfortable period of time, would have been for lumbermen to sit tight and hold their products, rather than attempting to dispose of them when there was no market and incidentally apparently trying to see who could lose the most money on what relatively few orders there were to be had.

"Canadians, particularly British Columbia lumbermen, he said, are enjoying a fair business and a fair profit. They did not become panicky when trade was slow, and immediately set about to slash prices and demoralize the markets.

"Mr. Mackin, accompanied by Mrs. Mackin, is on his way to Chicago, Toronto, Montreal, New York and other eastern markets. Through Calgary and Manitoba especially, he reports considerable building activity. While in Minneapolis he spent a good portion of his time conferring and visiting with Neil J. McCormick.

"The Fraser Mills are the largest mills in the Dominion of Canada. The concern operates at present approximately 180 retail yards in Canada, scattered through the provinces of Alberta, Saskatchewan and Manitoba.

"As to the quality of Mr. Mackin's humor and his capacity for recognizing a joke when he sees one, we'll leave as judges our readers on this side of the line."

Mr. Mackin, who spent some days in Toronto, when spoken to regarding the correctness of the foregoing, said: "I am amazed how such a report should find its way into print. I have always refrained from criticizing the course or programme of any individual or association of lumbermen. I was not interviewed by anyone in the city of Minneapolis or elsewhere and it has never been my policy to offer any criticism of others in the lumber line. Conducting the business of the company, with which I am connected, is the principal interest I have in the lumber industry at the present time. It would, certainly, be shortsighted and discourteous on my part to go to another city and tell the lumbermen there how to run their affairs. I feel sure that my attitude will not be misconstrued by any reference that has been made." Mr. Mackin added that he foresaw last summer that deflation was bound to come, and, in the case of his own company, they started reducing lumber prices six months ago, and the liquidating process had been going on ever since. Mr. Mackin, from his intimate connection with all branches of the lumber industry, has an excellent opportunity to study market conditions and he believes that there will be a steady improvement from now on and that the future is fairly promising. Further than that he did not care to discuss the situation at present.

Mr. Donnelly Speaks up for the Coast

Patrick Donnelly of Vancouver, B.C., who is well-known in the Pacific Coast as one of the leading financiers of the west, was in Montreal recently on business connected with the Bridge River Timber & Mfg. Co.,

Mr. Donnelly is deeply interested in the timber resources of British Columbia and is enthusiastic regarding the future possibilities of that province. He spoke of the reduction in freight rates that has just gone into effect on lumber shipped from British Columbia to Eastern Canada, and declared the United States was becoming more and more dependent on the Dominion for its lumber supply.

"The outstanding feature of American lumber importation during the fiscal year was that the value of sawed lumber increased from $28,874,405 in 1909 to $55,050,197 in 1920. Marked increases in lath shingle and wood pulp are also shown by figures of the Bureau of Foreign and Domestic Commerce," he said.

"On the other hand," Mr. Donnelly continued, "it is evident by the figures supplied by the Dominion Bureau of Statistics at Ottawa, that Canada has now to look to British Columbia for its principal supply of lumber. Lath, lumber and shingle production in the Provinces of Ontario, Quebec and British Columbia, 1918-19: Ontario, 1918, $42,782,958, 1919, $36,734,791; Quebec, 1918, $40,199,895, 1919, $34,557,982; British Columbia, 1918, $39,442,660, 1919, $44,746,347. (Pulp and paper mills and logging operations are not included in this statement). The capital invested in the lumber and pulp and paper industries in British Columbia is as follows: 1917, $64,433,831; 1918, $84,114,436; 1919, 101,557,167."

What City Will Get This Big Plant?

Sir Alexander Maguire, president of Maguire, Paterson & Palmer, Canada, Limited, British match manufacturers, was in Montreal recently. He also paid a visit to Pembroke where he inspected the splint factory which had been erected in that town and is now in operation. When interviewed, Sir Alexander said that matters had not yet reached a stage that allowed him to make any announcement as to the plans of the company, which, in general, are the establishment of a $5,000,000 match-making plant. He thought, however, that it would not be long before his project became more advanced.

Since Sir Alexander left Montreal last fall, rumors have been rife as to where the main plant is to be established, but it is understood that no definite plans have yet been reached. A recent report from Quebec city suggested that locality, but it would appear that it is too far from the company's lumber resources at Pembroke. Montrealers are hopeful that the big proposition will be located in that city.

Impetus Imparted to Tree Planting

Following an address by H. J. Moore, Provincial Highway Forester, members of the Chamber of Commerce of Stratford, Ont., passed a resolution calling on the government to fix an annual tree-planting day, to begin next year, so that forests may be restored and highways lined with trees.

Mr. Moore, in his address, touched on some phases of civic beautification, pointing out that younger people and the children were not particularly interested in such matters, largely because no effort is being made to educate them. He advocated the adoption of every possible means to interest children, as from sources such as these inspiration comes.

Tree-planting should be under the control of one person or board in every municipality, he said, so that trees would be properly planted and spaced, and not more than one variety on each street, but that each street should be planted with one kind of tree. At the present time there are only about 10 per cent. of trees along provincial highways healthy and in good alignment. To improve this condition and to lay out park spots along the highway is Mr. Moore's job, and he spoke most earnestly on the urgent need of co-operation all through the country to save the trees.

Will Send Trees to New Zealand

Vancouver's parks and boulevards are to be adorned with species of trees and flowering shrubs of New Zealand, while the maple, national emblem of Canada, will take root in the public squares of the cities of Christchurch and Auckland. Mr. J. Fyfe Smith, president of the Vancouver Horticultural Association, who returned recently from a trip to Australia and New Zealand, stated that he had made the necessary arrangements.

Mr. Fyfe Smith, who for years has been an ardent horticulturist, is greatly impressed by the flowers Australia and New Zealand have to offer to a tract and please the eye of the tourist. Their parks are far ahead of those in Canadian western cities. The private gardens are very beautiful, but there are several in Vancouver, which would compare favorably with these.

It was arranged to exchange arboreal and floral products with the cities of New Zealand, as the climate there more approaches that of British Columbia than that of Australia. In addition to maple saplings, the New Zealanders are anxious to introduce into their country the spruce, birch and other varieties. The species of flowering shrubs which will be sent here are unusually attractive, states Mr. Fyfe Smith.

Too Much One Sided an Arrangement

Sir George E. Foster is always pleasing and happy in his public addresses. He can also be gentle, yet incisive when it comes to pointing the way which others should follow. Recently the Canadian Minister of Trade and Commerce spoke in New York City, during which he took occasion to point out a few plain facts to our neighbors across the border. He declared that, during the past year, Canadians had bought from the United States $921,000,000 worth of goods. This meant that every man, woman and child in Canada spent on an average $115.00 in purchasing from the United States. The latter country had purchased from the Dominion only $560,000,000 worth, which was exactly $5.00 for every man, woman and child in the United States. "Then," declared Sir George, "let us be neighbors. Buy as much from us as we do from you, and when we come down here with our goodwill security Canadian dollars, be above offering us 88c."

TIMBER BLOCK IN BRITISH COLUMBIA

For Sale

TO close out an estate there is offered for immediate sale, block of standing timber covering an area of some 25 square miles. Contains Spruce, Fir, Tamarack and Pine. Situated about 10 miles from railway station. Block has been carefully cruised. Reports, maps and full particulars on application to

National Trust Company, Limited
22 King Street East - TORONTO, Canada

FOR SALE

Wholesale Lumber Business

Owing to the death, recently, of Mr. Jas. G. Cane, the business heretofore carried on by him and Mr. Geo. A. Anderson, as Jas. G. Cane & Co., is hereby offered for sale as a going concern.
The stock on hand consists of White Pine and Norway Lumber and Lath: approximately 4,000,000 ft. of lumber and 1,500,000 pcs. of Lath, piled at the following points: Victoria Harbour, Midland, Peterboro, Callander, Spanish Station, and Pakesley.

FIRE BRICK

AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

EDGINGS

V. Larieviere is erecting a new sawmill at Rexton Falls, Shefford County, Que.

The capital stock of the Nicholson Lumber Co., Burlington, has been increased from $25,000 to $100,000.

The sawmills of J. B. Smith & Sons of Callander, Ont., resumed operations recently and expect to have a busy season.

The Chicoutimi Pulp Co. have started work on a log chute, one and one-half miles long at Chandler in Gaspe county, Que.

Genoa Logging Company's loading camp at Cowichan Lake, B.C., which was closed for a time owing to a shortage of logs, has resumed operations.

Roofing Homes Company, Limited, Toronto, was recently incorporated to mnaufacture and deal in roofing and other building materials. Capital $40,000.

The Community Builders, Limited, Toronto, were recently incorporated to conduct business as builders, contractors and building material merchants. Capital, $500,000. H. D. Johnston and H. B. Taber, of Toronto, are two of the incorporators.

The Toronto Homebuilders' Association, Toronto, was recently incorporated to promote all kinds of building and protect those engaged in the building trade. Two of the incorporators are H. D. Johnston and H. B. Taber, both of Toronto.

The River Charlo Building Company, Limited, Charlo, N.B., have been incorporated to manufacture and deal in logs, lumber and other forest products. Capital, $10,000. P. Fraser and W. C. Hamilton, both of Charlo, Restigouche County, N.B., are two of the incorporators.

The Grimmer Settlers Company, Limited, St. Quentin, N.B., was recently incorporated to conduct a general lumber business, manufacturing and dealing in lumber, timber and other forest products. Capital, $30,000. N. Pelchot and A. Gauthier, both of St. Quentin, are two of the incorporators.

Napoleon Gignac, Inc., Quebec, P.Q., have been granted a provincial charter to conduct a general lumber business, manufacturing and dealing in lumber, timber and other forest products. Capital, $99,000. Rose de Lima Hebert and Ernest Gignac, both of Quebec, are two of the incorporators.

The ratepayers of Southampton, Ont., recently carried by a large majority a by-law guaranteeing the bonds of Panels, Limited, for $20,000, to assist the company to enlarge their factory. The company proposes to extend their plant for the manufacture of patent veneer rim-bound table tops and other lines.

H. H. Ross, of the Ross Saskatoon Lumber Co., Waldo, B.C., who is on the Coast, reports that about 75 per cent. of the mills in East Kootenay are operating, principally on tie orders. This business may keep them going for another two or three months. Those plants which have no tie orders are not operating yet.

It is announced that a Brantford firm has secured a site at Mount Dennis near Toronto, for the manufacture of fireproof shingles, and are proceeding with building operations. The new industry will give employment to between 300 and 400 men and the output will be from 40 to 60 cars a week. The site is located on the G. T. R.

In a fire which recently visited the Morin block, a large ten-storey office building in Quebec, and entailed a loss of $300,000, several lumber firms suffered damage to their offices. Among them were Grogan & Conway, Mark H. Kaine and the South Shore Forest Products, Limited. It is announced that the Morin block will be rebuilt immediately.

The Foley Lumber Co., 18 Toronto St., have opened up a retail yard at the corner of Dupont and Shaw Sts., Toronto, which is in charge of C. K. Foley. Michael Foley will look after the wholesale end of the business. The new yard carries a large stock and the company announce that it is their intention to open up other yards in Toronto in the near future.

H. J. Moore, Provincial Forester, recently addressed members of the Board of Trade in Galt, Ont., on his work, especially with regard to the scheme to beautify the provincial highways by having both sides of roads lined with trees. It is the intention to have Mr. Moore make a tour of the roads in the vicinity of Galt with a view to planting them.

The Kipawa plant of the Riordon Company has been closed for a couple of weeks in order that repairs may be made and a general overhauling of machinery take place. Exaggerated reports were sent out regarding the shutting down of the mill and the alleged throwing out of employment of a large number of men, all of which the officers of the company deny. The market for sulphite pulp is improving steadily.

D. A. Wood's drive for Fraser Company, Limited, consisting of 2,000,000 feet of lumber, reached safe waters recently. This is considered by the oldest inhabitants of the settlement to be the record drive that ever came down the north branch of the Oromocto River in New Brunswick. In spite of the uncertain conditions of the weather, Mr. Wood broke the record on the north branch.

The Kitchener, Ont., Board of Parks management have granted the public school board the privilege of having the boys of the senior fourth classes of Victoria School take part in a practical demonstration of reforestation. School Trustee L. Sattler has agreed to secure the saplings required and will assist the boys in planting them in Victoria Park. Each boy is to plant and name one tree.

A five century old oak timber from the condemned roof of Westminster Hall, London, now being restored by a unique method on account of devastation wrought by the death-watch beetle, has been brought to Montreal by W. D. Stokes and is now located at the Forest Products Laboratories of Canada, University street, Montreal. This ancient block of British oak has been so honey-combed by beetles that it resembles a sponge, while in parts it has turned to a greenish tint.

It is stated that the temporary closing down of several large industries in the north and the curtailment in the production of pulpwood as well as mining operations, has contributed largely towards unemployment, and laborers have been swarming into Cochrane in the hope of securing work on the extension of the T. & N. O. Railway to James Bay, which is expected to start

in the near future. A party of surveyors has gone north to Cochrane to complete work in the final survey for the new extension, and when this work is actually commenced it will quickly absorb what surplus labor exists in the north.

J. R .Eaton & Sons, of Orillia, Ont., whose provincial charter was recently cancelled, are now operating under a federal charter. The change was made some time ago as the firm found that it would be more practical for them to be incorporated under a dominion charter, as they sell their products in all of the provinces. The move has not meant any reorganization but simply expansion and increased production.

A provincial charter has been granted to the Temiskaming Pulp & Paper Co., Limited, with a capital stock of $500,000 and headquarters in Toronto, to manufacture, sell and deal in pulp and paper and also to carry on the business of lumbermen, sawmillers, etc. Among the provisional incorporators are,—George H. Sedgewick, James Aitcheson, John W. Pickup, C. C. Calvin and Duncan A. McGrimmon, all of Toronto. It is understood the company will erect a large pulp mill near Haileybury, Ont.

A despatch from Vancouver announces that Philip Brooks, the well-known lumberman, is contemplating the erection of a handsome new residence on Shaughnessy Heights, to cost approximately $180,000. The grounds are now being laid out with lawns, flower beds and shade and fruit trees, and are almost a block in extent, running from Granville St. to Connaught Drive. The site is the highest in Point Grey and commands a magnificent view.

The employees of the sulphite pulp mill of Frasers, Limited, Edmundston, N.B., recently decided to accept a cut of 20 per cent. in wages. The mill, which has been closed since early in the year, has now resumed operations. The men at first refused to accept the decreased pay but after interviewing the officials and finding that the plant would remain closed if the men struck, another meeting was held and a vote taken that stood almost two to one in favor of returning to work at reduced wages.

The annual meeting of the St. John River Log Company was held in the office of the company in St. John, N.B., when officers for the ensuing year were elected. J. Fraser Gregory again is president, and Walter Jackson was re-appointed manager and secretary. It was announced that the amount of lumber brought down this season was the smallest the company ever had on the St. John River, being only about 10,000,000 feet.

M. A. Grainger, managing director Timber Industries Council of British Columbia, has been made the recipient of a handsome illuminated document by the provincial forestry branch in commemoration of his association with the department as chief forester and as an appreciation of his services and his relations with his assistants. Hon. T. D. Pattullo, minister of lands, made the presentation. The gift was an artistic book, bound in red and yellow cedar and containing the signatures of all the members of the forestry service.

The management of the Beaver Board Company in Buffalo, and its 23 subsidiaries in various sections of the United States and Canada, have been taken over by the firm of George W. Goethals & Co. General C. C. Jamieson of the Goethals firm, has been elected vice-president and general manager of the Beaver Board Companies, and is working under a one-year contract. G. C. Miller, also of the Goethals firm, is associated with Gen. Jamieson in the operation of the companies. Mr. Miller is also president and general manager of the Tillotson Manufacturing Co. of Pittsfield, Mass.

Shingle manufacturers have changed the name of the Shingle Agency of British Columbia to the Shingle Manufacturers' Association. A. D. Anderson, of Peers & Anderson, former president of the Shingle Agency, Vancouver, has been elected president of the new association, and J. A. Edgecombe, of the Edgecombe-Newham Co., Vancouver, vice-president. Frank Nash, former secretary of the Shingle Agency, has resigned to go into private business, and Fred H. Lamar, formerly secretary of the Western Retail Lumbermen's Association (of Canada), has become secretary of the Shingle Manufacturers' Association.

An offering of $1,250,000 7 per cent. first mortgage 15-year sinking fund bonds of Clarke Brothers Paper Mills, Ltd., is being made, with a bonus of 30 per cent. common stock. Clarke Brothers Paper Mills, Ltd., organized under a Dominion charter, is an enterprise associated with Clarke Bros., Ltd., which was formerly a partnership of W. G. and W. W. Clarke, who have been in business for over forty years at Bear River, N.S., during which time they have developed and successfully established a series of allied industries, based chiefly on the products of the forest. Clarke Bros., Ltd., own the majority of the stock of Clarke Bros. Paper Mills, Ltd.

A charter has been granted to the Canadian Sawmills Co., Limited, Toronto, to manufacture and deal in lumber and wood products. The capital stock is $250,000. It is understood that this company, which has recently been organized and is composed largely of interests associated with the Fesserton Timber Co., Toronto, will take over the manufacturing end of the latter organization. The Canadian Sawmills Co. some time ago purchased the plant of the Pierce Lumber Co. at Timmins, Ont., and are also erecting a new mill at Krugersdorf on the T. & N. O. above North Bay. The cutting capacity will be 25,000 to 30,000 feet a day and the product turned out will be spruce.

Fred H. Lamar, the popular secretary of the Western Retail Lumbermen's Association, has been appointed secretary-manager of the Shingle Agency of British Columbia, with headquarters in Vancouver, B.C. For over three years Mr. Lamar served as secretary of the Western Retail Lumbermen's Association, and the present status of that organization is largely due to his efforts. The plan books which the association published each year were wonderful evidence of the splendid aid that this organization offered its members, and the excellence of these annual books was due to the untiring work which Mr. Lamar put on them. Mr. Lamar succeeds Frank Nash, who is going into private business.

The Fraser Companies' Victorian mills in Fredericton, N.B., were recently shut down as a result of the inauguration of the 10-hour day and the refusal of union mill men to work more than nine hours. The mill generally employs between 75 and 90 men. The Fraser Companies, in a statement, said it was true they had laid off the men because the union had voted to work only a nine-hour day. "We think the mill should run 10 hours," said Archibald Fraser. "We do not want to be arbitrary," he continued, "but we have got to get our costs down in order to sell our output, and the only way it can be done is to operate on the 10-hour day. If we can get our costs down we can sell our goods, and will thus be able to operate. At the present time there is room for only five weeks' sawing in our yards."

C.M.C.

No. 504 Medium Tenoner

Will handle all classes of light and heavy tenoning in piano, furniture, sash, door and blind factories. It is a high grade, Canadian made, well built machine including in its construction the latest improvements and designs to produce the highest class work speedily and well.

Table is mounted on anti-friction rollers enclosed in dust proof cases fitted with steel scrapers and felt wipers to keep ways clean and prevent dust and shavings entering the cases.

Will tenon stock 4″ thick and 17″ wide and cut 5⅜″ tenon on single cut and 8½″ on double cut.

Frame is strong and has sufficient weight to insure freedom from vibration.

Full particulars and prices on request.

Camp Storekeepers—

Let us send you our catalogue, price lists and samples. We are confident that the all round superiority of our line will convince you of the desirability of giving them a place in your stocks.

Everything you require for the comfort and health of your men is included,—clothing, footwear, bedding and tents. Write to-day.

"Durabil" Waterproof Mackinaw Coats, Pants and Shirts, Sweaters, Underwear, Mitts, Socks, Moccasins, etc., etc.

Grant-Holden-Graham, Limited

Factory and Warehouse

147 to 151 Albert Street, Ottawa, Canada

Frightfully Burnt!

This phrase is used to epitomize the conditions which exist throughout our country.

Every hour of the day and night THE TORCH OF CARELESSNESS brings destruction to somebody's property in Ontario.

Two out of every three fires occur in our homes. No wonder the housing problem is acute.

Eight out of ten fires are preventable. Fire waste is an economic crime, caused principally by carelessness and indifference.

CLEAN UP

Accumulations of waste material, rubbish, boxes, shavings, papers, and conditions that create disorder.

information and text books, "Conservation of Life and Property from Fire," "Lightning, its Origin and Control," free on request.

Ontario Fire Prevention League, Inc.

George F. Lewis, Secretary

Good Will

—a mighty valuable asset to your business and something that cannot be built up in a few days. It is the result of painstaking efforts to give the customer just a little more than he expects—keeping the quality of your products standard—and backing up every word of your advertisements. In short, it's Service—Real Service—that builds Good Will.

Gunns

"Tell Me What You Eat and I'll Tell You What You Are."

The above quotation may be aptly applied to the men of a lumber camp as their capacity for work, and their state of mind, greatly depends upon the quality of the food.

GUNNS Good Food promotes efficiency and contentment. Let us have your requirements for the following:—

Beef, Veal, Mutton
Barrelled Beef,
Barrelled Pork,
Dry Salt Meats,
Butter, Cheese,
Oleomargarine, Lard,
Eggs, Poultry, Headcheese,
Canned Meats, Mincemeat,
Pork and Beans
Beans, Sausages.

Prompt shipment and satisfaction assured.

All men have a weakness for pastry. Give them real pies occasionally, made with "EASIFIRST" Shortening.

P. Beauchemin Fils, Amos, Quebec.

There is no *better* combination than Link-Belt ≻FLINT-RIM≺ Wheels and Link-Belt Chains

THEY fit each other snugly. There is no sliding or slipping as the links seat themselves against the teeth. And they continue to fit each other snugly, because the flint hard surfaces prevent wear.

Measure values in length of service, and you will find there is no *cheaper* combination than ≻FLINT-RIM≺ wheels and Link-Belt Chains.

Send for catalogue—and full particulars.

The Moreau Barker Does the Work

THERE is never any question as to whether the Moreau Barker can handle the work, be it Winter or Summer.

The logs may be 4 inches or 50 inches in diameter, they may be wet, frozen or dry, the Moreau Barker will handle them swiftly and easily, taking off barks, knots and lumps.

The feeding system used makes it suitable to receive and send the logs to the stockyard or to the car by chain conveyor with very little labor. We have an interesting catalogue which explains these and other features in detail. May we send it?

The "MARSH" Gasoline Hoist does the work

Read the following testimonial:—

"Regarding the 6 H.P. Single Drum "MARSH" Gasoline Hoist that I purchased from you last August I take pleasure in advising you that this machine met the requirements perfectly and would say that it is giving entire satisfaction in every respect."

(Name given on request.)

Do you want to reduce your Skidding and Loading Costs and Increase your Daily Output? A "Marsh" Hoist will do it for you as it has for others. Write for booklet and full information.

GOODHUE BELTING

FACTORY TO YOUR MILL

To the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts," then you will buy a "Goodhue."
According to the conditions under which the belt has to run, we recommend "Extra," "Standard" or "Acme Waterproof"—each brand the best quality, but each made for a different service

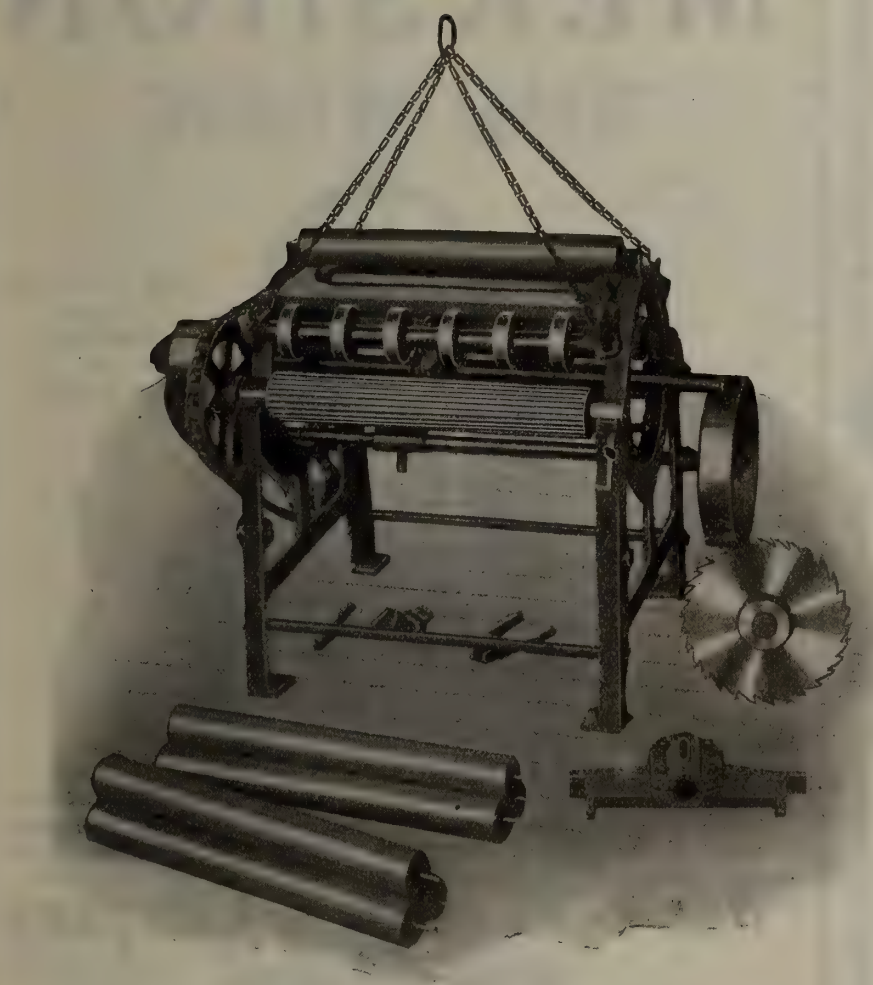
The Ideal Edger for Light Mills



Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

Tudhope-Anderson Detachable Lumber Trucks

Unequalled stand-up-ability on tough, rough and soft road-beds are the tests that explain the widespread popularity of these sturdy trucks among lumbermen. Cut shows Front Hauling Gear No. 41 coupled to Hind Gear No. 42. One or more Hind Gears may be attached or detached with ease.

Look at the wide tire steel wheels. They mean easy hauling. We guarantee them. Spokes may be renewed in case of accident—not so with others. Axles are high quality square steel ensuring many years' service. Wood parts are best oak, air-seasoned and kiln-dried. All parts well ironed and braced.

Built to the following specifications:—

No. of Truck	Size of Steel Axle	Tire Inches	Wheels Inches	Frame Length	width
41 Front Gear	1¾" square	4 x ½	26	....	....
42 Hind Gear	1¾" square	4 x ½	42	5 feet	40 inches

Fires Start Easily in Lumber Camps

Next to a fight, the easiest thing to start in a lumber camp is a fire. Overturned oil lamps or lanterns are prolific sources of fires and a fire in your camp may mean the loss of an entire season's cut. Let fire get a start and camp, provisions and equipment are sure to go.

The surest way to eliminate the fire danger in every oil lamp or lantern is with Dominion Light. Its incandescent bulbs are absolutely safe. Then there is the convenience of having all the light you want where you want it.

Fine materials, expert workmanship and rigid inspection insure Dominion users the utmost reliability, ample reserve power, with economy of fuel and a low maintenance. Dominion Light Plants are quality products built to a high standard and not to a competitive price.

Write us for full description and name of nearest dealer.

SPECIFICATIONS

Rating one K.W. (1000 watts) with a continuous overload capacity of 20% or more. Battery of 160 Ampere hours. Air-cooled engine with 3 S.K.F. ball bearings operates on Kerosene. Loads sixty 20-watt lights with engine running or thirty 20-watt lights from battery alone for eight hours.

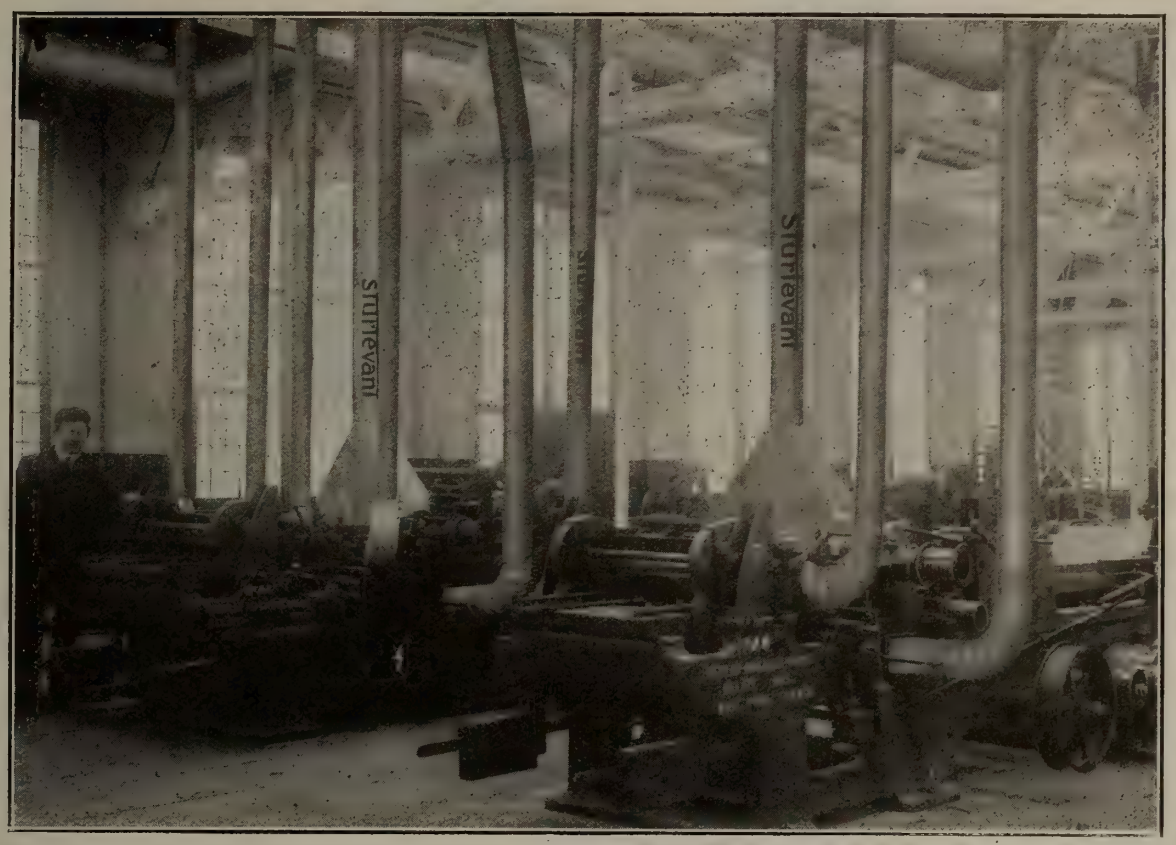
REG US PAT OFF

PUTS AIR TO WORK



Where Waste Makes Fuel

The familiar claim of a Chicago pork-packing plant that "everything is utilized except the squeel"—can be taken as an object lesson for planing mills and woodworking establishments.

The waste in a planing mill—shavings and sawdust—can be removed to the boiler house for fuel, the very second it is formed at the machine.

This is accomplished by the

Sturtevant
(TRADE MARK)

Slow Speed — Low Power
Planing-Mill Exhausters

Many plants are filling their entire fuel requirements by using our system to convey this material from the shop direct to the fire. The illustration shows an installation of a Sturtevant System in the C.P.R. Angus shop, Montreal.

Write for our special bulletin describing the Sturtevant System for Planing Mills.

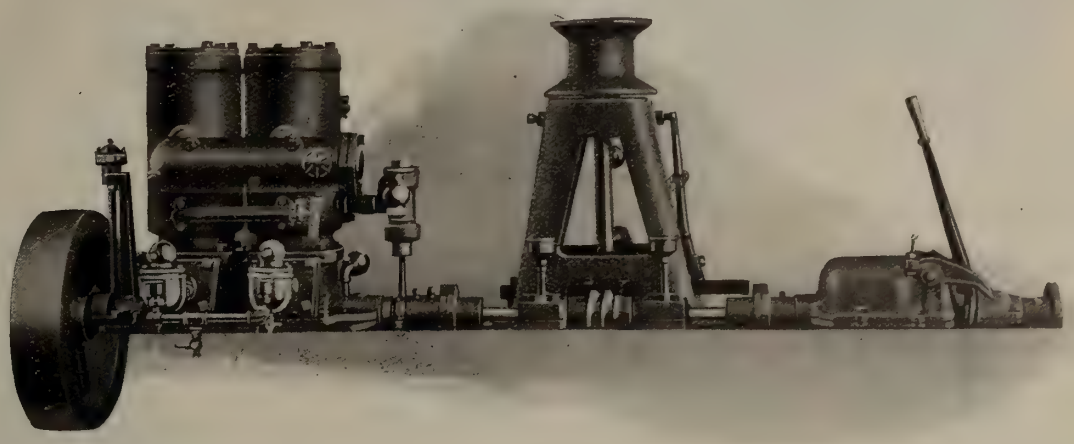
Adams Gasoline Alligator Pointers

Lumbermen find it quicker and easier to work with an Adams Pointer. It is a powerful and efficient gasoline boat that has given satisfaction to the lumber industry throughout the Dominion.

Adams Pointers are made by expert workmen at Penetang. They are easier and safer to use than alligators and tugs. They have a strong, well built, easy running engine and a powerful reverse gear and towing winch that render them equal to the heaviest work, and can be handled by one man.

An Adams Pointer should be included in your equipment. Send for further particulars and blue prints, which will give you full details.



Above cut shows machinery that is installed in a 26'-6" x 6' Special Lumberman's Pointer.

Adams Engine Co., Penetang, Ont.

J. T. PAYETTE, Proprietor

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean, heavy duty work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ⅜ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

W. G. Harris,
President the Canada Metal Co., Limited

I want you to use

Imperial Genuine Babbitt Metal

For Stickers of highest speed, or Engines of heavy weight and

Harris Heavy Pressure

For all other general purpose work about your mills or factories, because in thirty-five years of practice, I have proven them to be

TRUSTWORTHY

Thousands of satisfied users.

You have my word, no better Babbitt is made, and I want you to believe me.

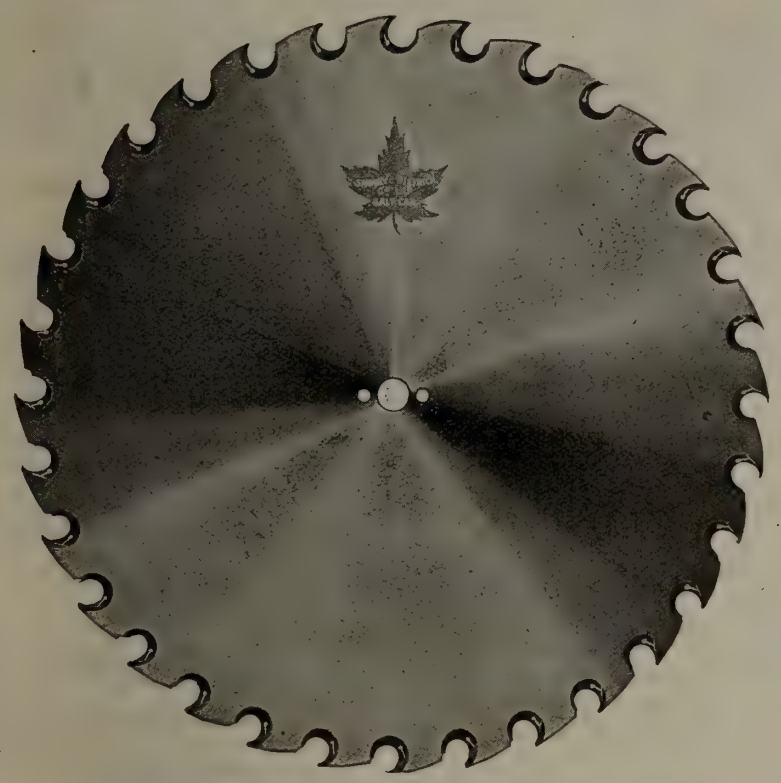
All Jobbers or Our Factories in

TORONTO MONTREAL WINNIPEG and VANCOUVER

will be pleased to fill your orders.

THE CANADA METAL COMPANY, Limited

Maple Leaf SAWS



Maple Leaf Circular Saws are made of Special High Grade Steel, accurately ground; have hard-tempered center which makes a stiff blade that will stand up under the most severe conditions, and is less liable to push over in case of accident.

Let us prove it to you if you have not discovered it already.

EVERY SAW GUARANTEED.

Cross-cuts, Band Saws, Shingle Saws, and Everything Pertaining to Saws for Lumbermen

The Largest ALL Canadian Saw Manufacturers

The right belt

Freedom from costly repairs and wasteful power leakage—due to inefficient transmission—is the result of the right belt in the right place. This is why Dominion Friction Surface Belting is in such wide use in lumber and pulp mills throughout the Dominion.

Without any obligation to you, our nearest service branch will gladly send an experienced belting man to help solve your transmission problems.

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

Have You Ever Considered Why?—

Practically every mill owner and consulting engineer specifies "Waterous" equipment when building a new sawmill or remodelling existing mills?

It is because they realize that in specifying such equipment they are employing an organization whose engineering skill and experience have been gained by over three quarters of a century of careful study of their equipment under actual mill conditions, also that into Waterous equipment is built all the experience that the past can contribute to the needs of the present, so that when Waterous equipment is installed, you are installing something more than mere machines, you are installing machines that have dependability, efficiency and service built in, as every time the name Waterous is placed on a machine it increases Waterous responsibility, for it represents our recognition of the fact that the confidence of mill owners and of consulting engineers must be upheld. For these reasons, we maintain in our factory a staff of highly specialized workmen who have spent years at their particular operation. Add to this the fact that all materials entering into the manufacture of Waterous products are carefully analysed and that the machines are carefully inspected during all stages of construction, and you have the reasons, why Waterous machines, after from 25 to 30 years of hard service are still producing to maximum capacity.

Waterous

Stability is a Carson Quality Characteristic

Carson Quality
Trade Mark Registered

P. S.—We make and sell horse harness and equipment of all kinds, trunks, bags, travelling robes and pack sacks.

The pyramid is the most stable of architectural forms. The pyramid is the design of the "Carson Quality" trade-mark. And all "Carson Quality" goods partake of the quality of the pyramid for stability, strength and goodness.

The Michigan Lumber and Skidding Harness is a "Carson Quality" product. In the bush—in the camp—at all seasons of the year—it is dependable, sturdy and strong. It will add to the value of your outfit and help increase your output.

Write us for particulars.

Just Compare It—

The way to prove the superiority of the Eddy Fire Pail is to compare it point for point with the old time pail of wood or metal.

The Eddy Pail is lighter and more durable and will never bulge, leak or fall apart. It is constructed in a way that keeps it **on the job**—its rounded botoom prevents it standing alone. It must be placed in a rack or on a hook.

See it at your Hardware dealers.

Kendall Gang Circular

The Machine that will convert your small logs into more and better lumber, quicker than ever before.

The illustration shows one of the latest designs of gang circular patented by Mr. I. N. Kendall, the well-known millwright, of Ottawa. This machine takes 16-26 in. diam., 10 gauge saws—will cut cants up to 8 inches in thickness, and we furnish with it necessary saw collars for any thickness of lumber desired. It has a hollow mandrel, water cooled saws; each saw has a separate guide; easily accessible and readily adjustable, and the bridge tree is so designed that it can be removed, the saws taken off and a new set put on in 7 to 10 minutes. Safety fingers hung just inside the front press roll prevent a cant flying back off the saws. Lumber cut on these machines is guaranteed to come out absolutely true to size from end to end, and so smooth that 1/16 in. over size is all the allowance necessary for finish.

Read what one user says about it:—

"The machine has given every satisfaction and in many cases far exceeded my idea of sawing lumber; the proof of this being that our customers are paying me $1.00 to $1.50 per thousand more for certain classes of lumber than they can purchase same quality elsewhere—this advantage being purely on account of the uniform and smooth sawing this saw is capable of doing."

We are the origina manufacturers of these machines

We have been manufacturing them for the past fourteen years, and the experience gained in all those years is at your disposal. We make these machines in three sizes, as follows, using

26-in. saws for 8-in. cants, as illustrated.
32-in. saws for 10-in. cants.
36-in. saws for 12-in. cants.

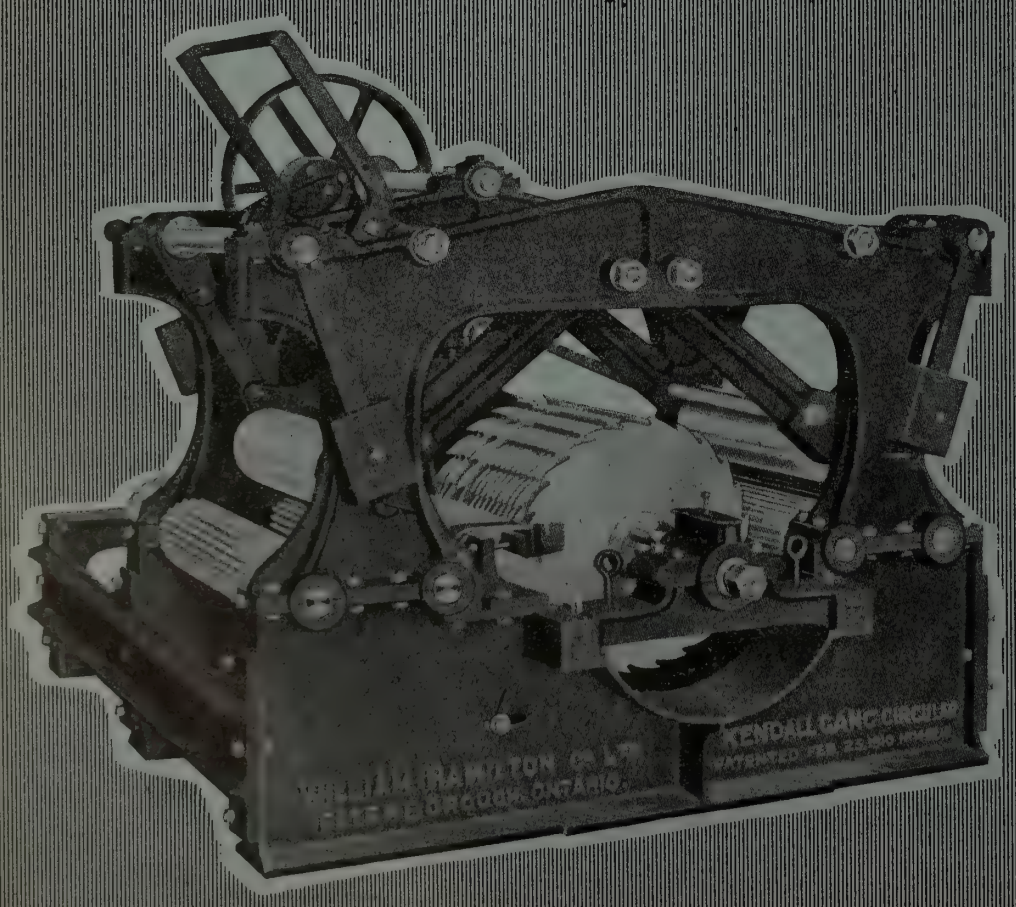
Each size is of the very latest design and up-to-date in every improvement.

May we send you a list of satisfied users?

We also make a complete line of twin circulars with chain or steam feed for slabbing logs for these machines.

William Hamilton Co., Limited

PETERBORO ONTARIO



What Every Merchant Knows

—that the services of a good wholesaler can be a mighty valuable asset to his business. That is why more and more merchants are turning to FESSERTON every year—they know they can rely on the service.

Perhaps you feel the need of a real service—giving wholesaler, too? If so, we shall be pleased to get acquainted. Why not write us for quotations and other information?

The Fesserton Timber Company, Limited

15 Toronto Street MAIN 795-6 **TORONTO**

Western Office - - Vancouver, B C.

We have at Vancouver the following quantities of Fir and Hemlock lumber manufactured by one of the largest and best mills on the Pacific Coast — a concern that enjoys the reputation of turning out the highest grades of lumber shipped from British Columbia.

The whole lot is in excellent shipping condition and can be shipped promptly. We have undertaken to move this stock quickly and we are able to quote prices that will allow us to move it.

If you are interested in Pacific Coast stock it will pay you to hold your orders until you get our prices. This block of stock is offered subject to prior sale; therefore, we would recommend that you wire us your inquiries.

—as quick as you need it

FROM our Logansport, Indiana, Service Yard (near South Bend) we are able to make hardwood delivery in half the time usually required because we have exceptional car facilities.

Our capacity at this yard is 5,000,000 feet—consisting chiefly of Ash, Elm, Maple, Oak, Poplar and Hickory. Delivery of any of these items—all of the highest quality— can be made just as you want them.

And by that we mean that we will fill your order to satisfy you absolutely—you to be the judge of satisfaction.
